Question from vendor

We are needing the following information to complete our solution:

1. Complete address for each of the location where the router will be installed. Airport's name only is insufficient.
2. A local contact person name, phone number and email address for each location.

Answer

As you may be aware, all contacts that were collected are available in the site schedule.

The Site schedule has been updated for the latest data collected from States for your reference.

Unfortunately it was not doable to collect the information for all potential sites of deployment in the APAC Region for the RFI issuance.

However, at that stage of the process (RFI), for the other locations/contacts you can make the assumption that the equipment will be installed at the international airport.
