PM role**

Importance of Human Factors

+ *One event*

Tenerife 1977

Two B747 collided on the runway, due to Take Off without clearance, and poor visibility.

› **Communication, teamwork, leadership, decision making**

- + *This accident had a huge influence on the industry, particularly in the area of **communication**.*
- + *Emphasis was placed on using **standardized phraseology** in ATC communication by both controllers and pilots.*
- + *The word "takeoff" was removed from general usage, and is only spoken by ATC when actually clearing an aircraft to take off.*
- + ***Less experienced flight crew members were encouraged to challenge** their captains when they believed something was not correct,*
- + ***Captains were instructed to listen** to their crew and evaluate all decisions in light of crew concerns.*
- + *Finally, was implemented what is known today as **Crew Resource Management (CRM)**.*

Importance of Human Factors

But every day there are good ones!

Importance of Human Factors

Jakarta June 1982
B747-200

› Successive Threats:

Volcanic ash – loss of 4 engines – Loss of pressurization – ATC misunderstanding – F/O oxygen mask broken – Mountainous area – Windscreen pollution – Glide slope inoperative

› Successive positive actions

Flying: Gliding

Navigating: Keeping the high terrain in mind

Communicating (Distress message + A7700)

Managing remaining systems: Applying restart drills, using oxygen masks, etc...

Situation awareness (terrain, loss of pressurization, oxygen mask failure...)

Teamwork (3 crew members)

Captain leadership

Decision making (high V/S due to F/O oxygen mask failure, type of approach...)

See also Video "*Falling from the Sky*" from the TV series *Mayday* (Air Emergency, Air Crash Investigation) [documentary TV series].

Importance of Human Factors

+ *Near Jakarta 1982...*

- › Cruising FL 370, **4 engines failed** due to **volcanic ash**.
- › The flight crew quickly determined that the aircraft was capable of gliding for 23 minutes and covering 91 nautical miles (169 km) from its flight level of 37,000 feet.
- › Emergency was declared. The crew squawked A7700. However, **Jakarta Area Control misunderstood** the message, interpreting the call as meaning that only engine number four had shut down.
- › A Garuda Indonesia flight relayed the message to Air Traffic Control so that it was correctly understood.
- › As **pressure dropped** in the cabin, **F/O oxygen mask was broken**; the delivery tube had detached from the rest of the mask. Captain decided to descend at 1,800 m per minute.
- › Reaching 13500 ft, after several engine restart procedures, the crew finally re-started 4 engines.
- › After a while, **engine number two surged again** and was shut down.
- › As Flight 9 approached Jakarta, the **crew found it difficult to see anything** through the windscreen.
- › An ILS approach was planned. However, the **glide slope was inoperative**, so the F/O monitored the descent using DME.
- › After landing the **aircraft could not taxi** by its own, due to poor visibility through the wind screen. It was towed to the gate.

Human Factors Model

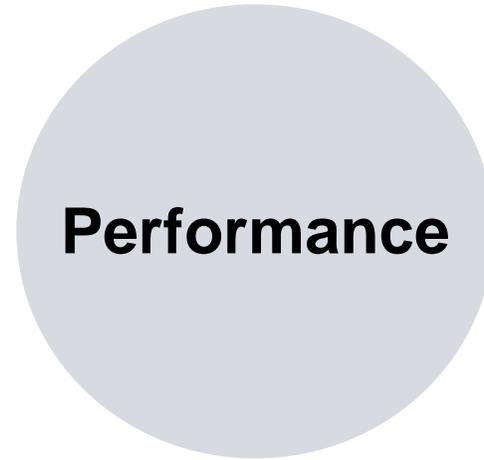

**Count how many times
the players wearing
white pass the ball**

Human Factors Model

+ Human Factors are:

Anything that affects a person's
performance

Human Factors Model

Good

Standard

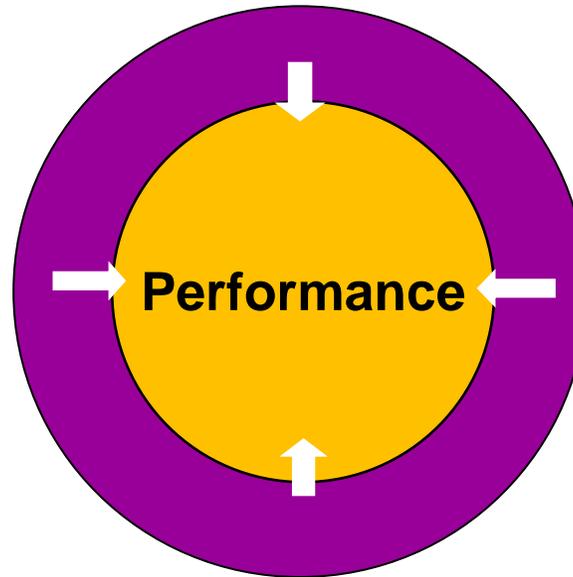

Poor

Direct Factors

+ The acts or omissions that directly affect performance

Decision

Awareness

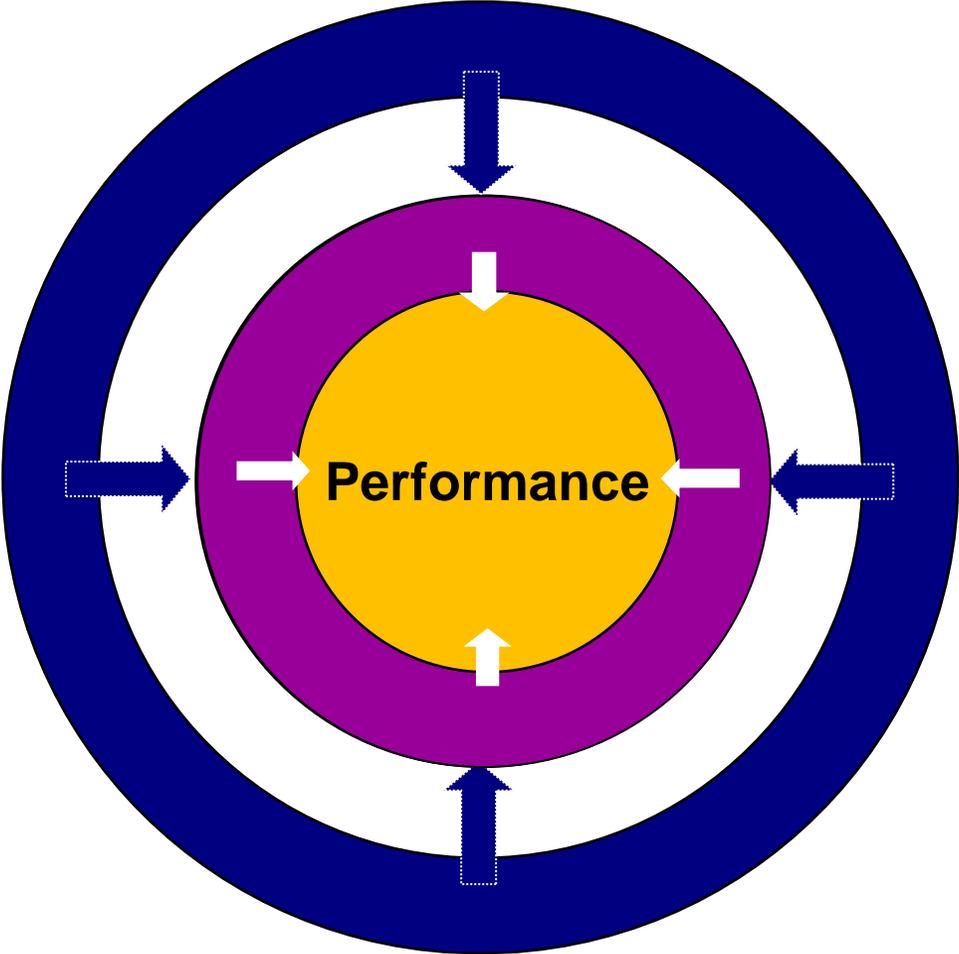

Dexterity

Distraction

Potential Factors

+ Things that have the potential to influence the direct factors

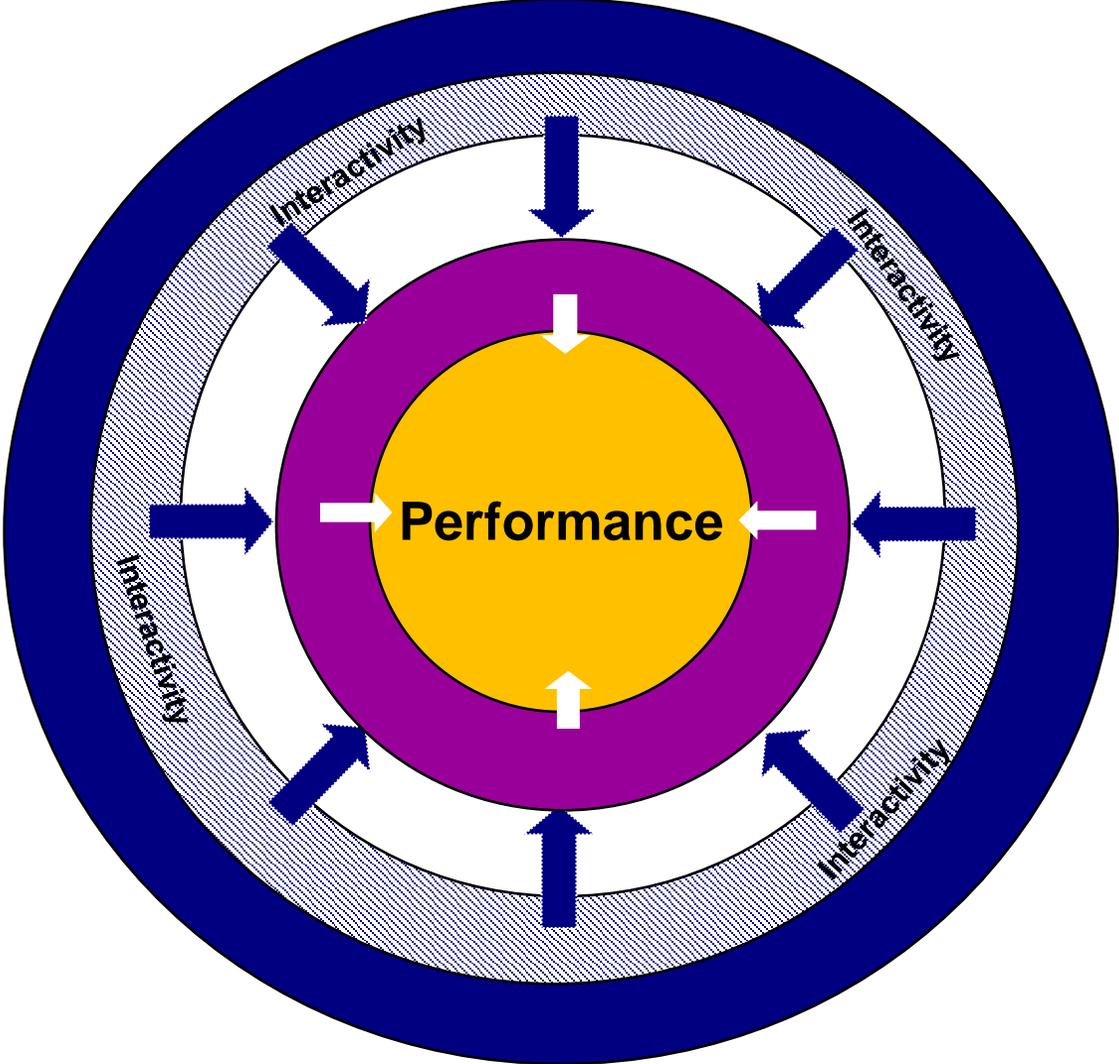

Design
Environmental
Fatigue
Illness
Visual illusions
Memory
Time
Ergonomic
Organizational
Commercial
Automation
Faulty equipment

System failures
Psychological
Negative attitudes
Physiological
Language
Procedures
Alert systems
Emergencies
Relationships
Documentation
Cultural
Stress

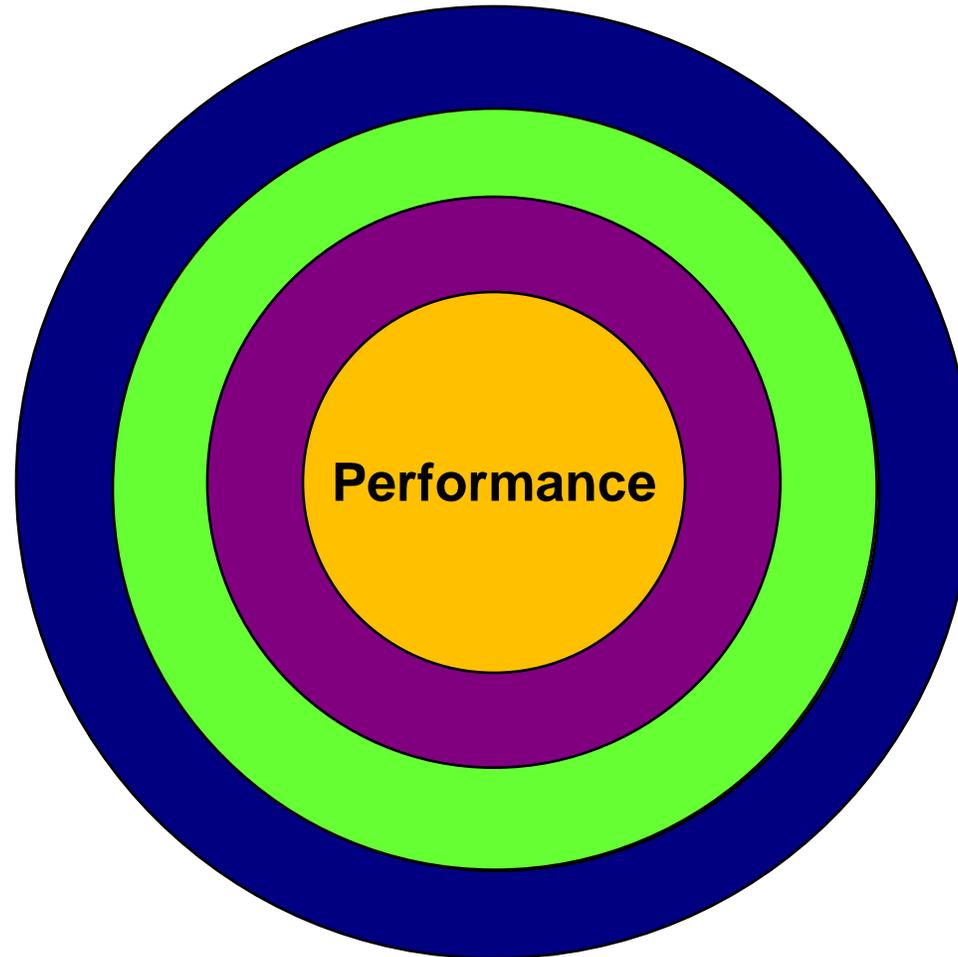

Potential Factors Interaction

+ Interactivity between Potential Factors will increase

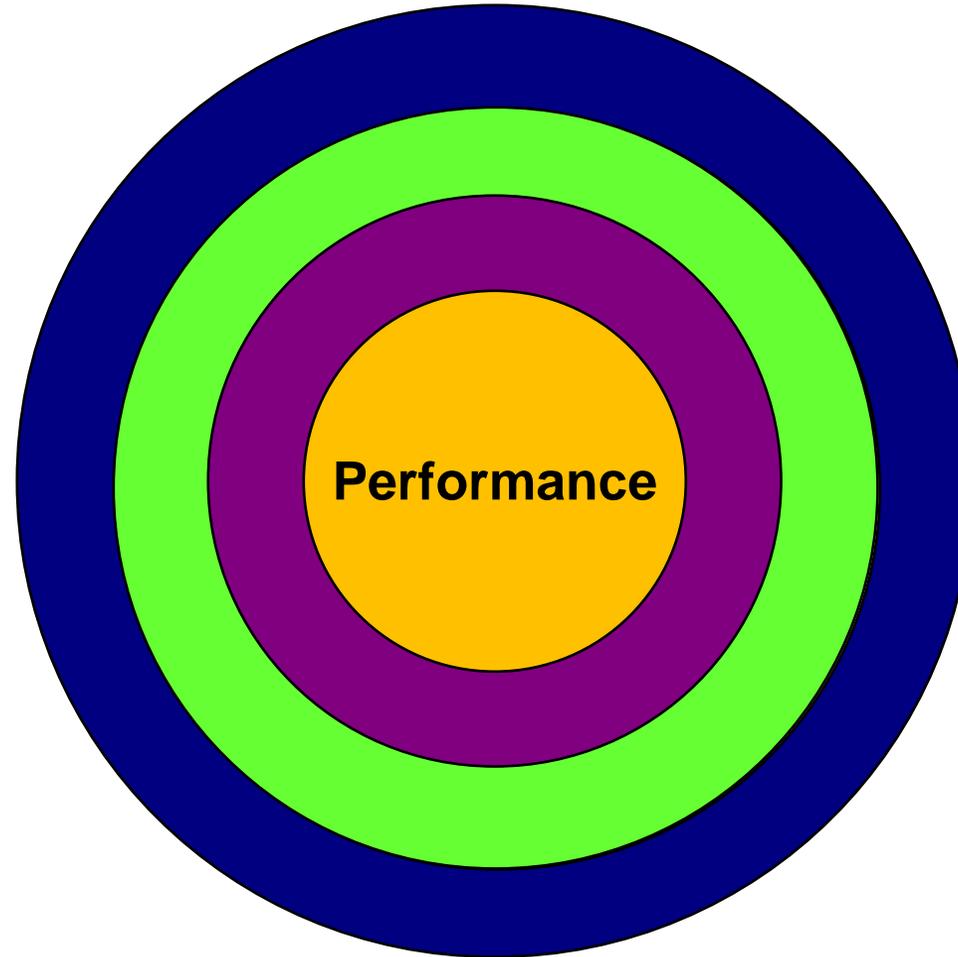

Managing Factors

- + Things that manage the effect of the Potential Factors and improve Direct Factors

Managing Factors - Organizational

Performance review
Training

CRM and Threat and Error Management

What is CRM?

+ We will develop, but **before**, let's explore **what is Airmanship**

CRM and Threat and Error Management

What is Airmanship ?

+ Airmanship is the **Technical** and **Non technical Knowledge, Skills** and **Attitude** that pilots need to ensure that aircraft is operated:

- + **Safely,**
- + **Efficiently,**
- + **Effectively**

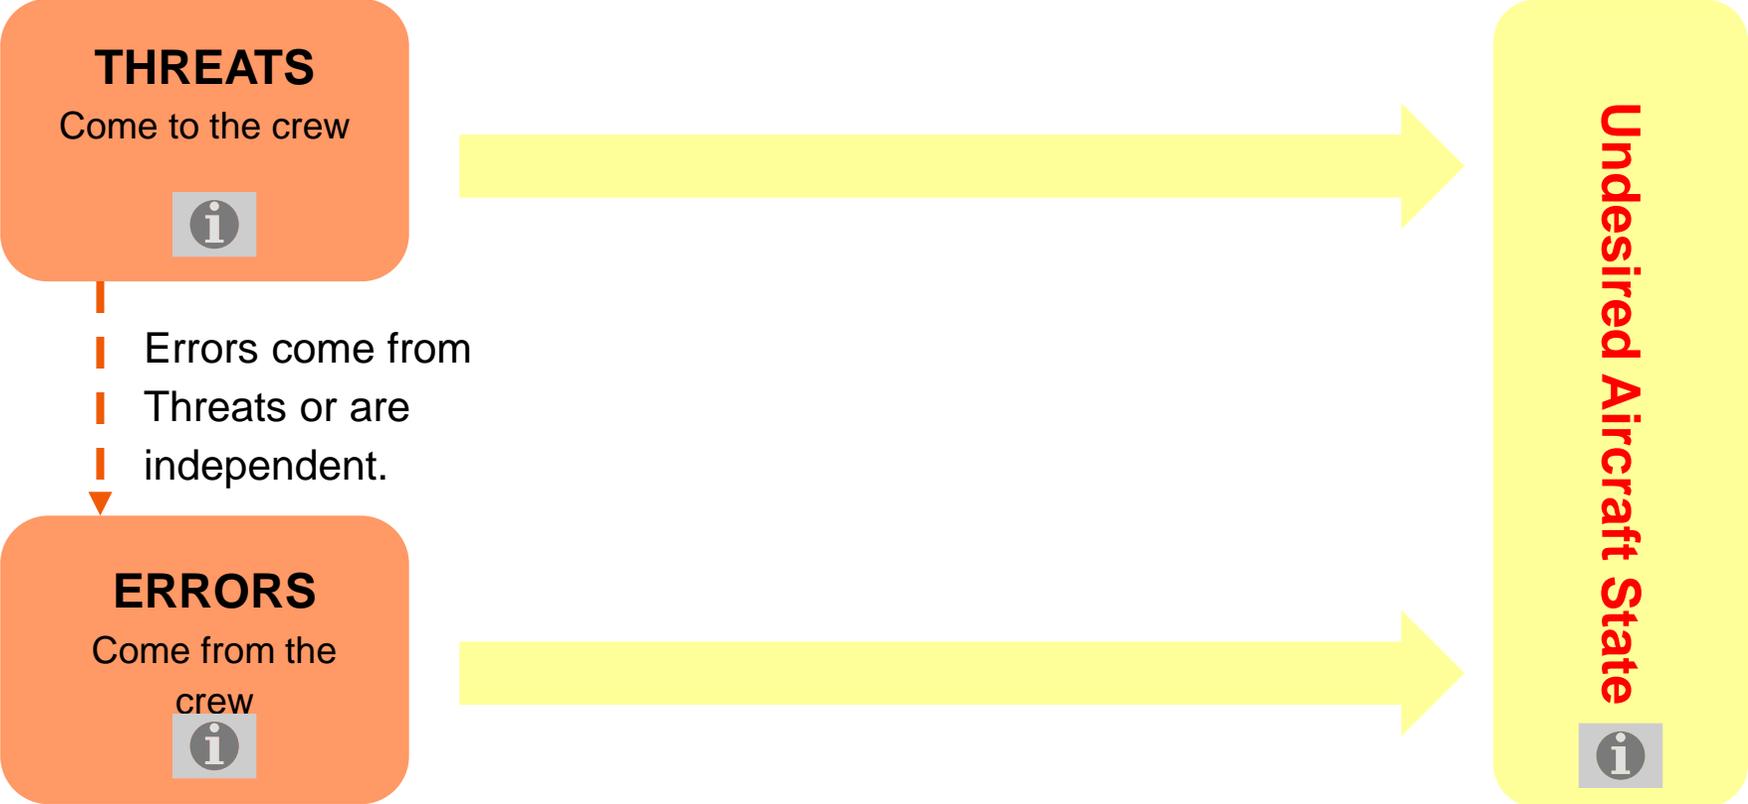

Airmanship	
Technical	Non-Technical
Knowledge Skills Attitude	Knowledge Skills Attitude

What is CRM?

+ CRM is the **Non-technical Knowledge** only

CRM and Threat and Error Management

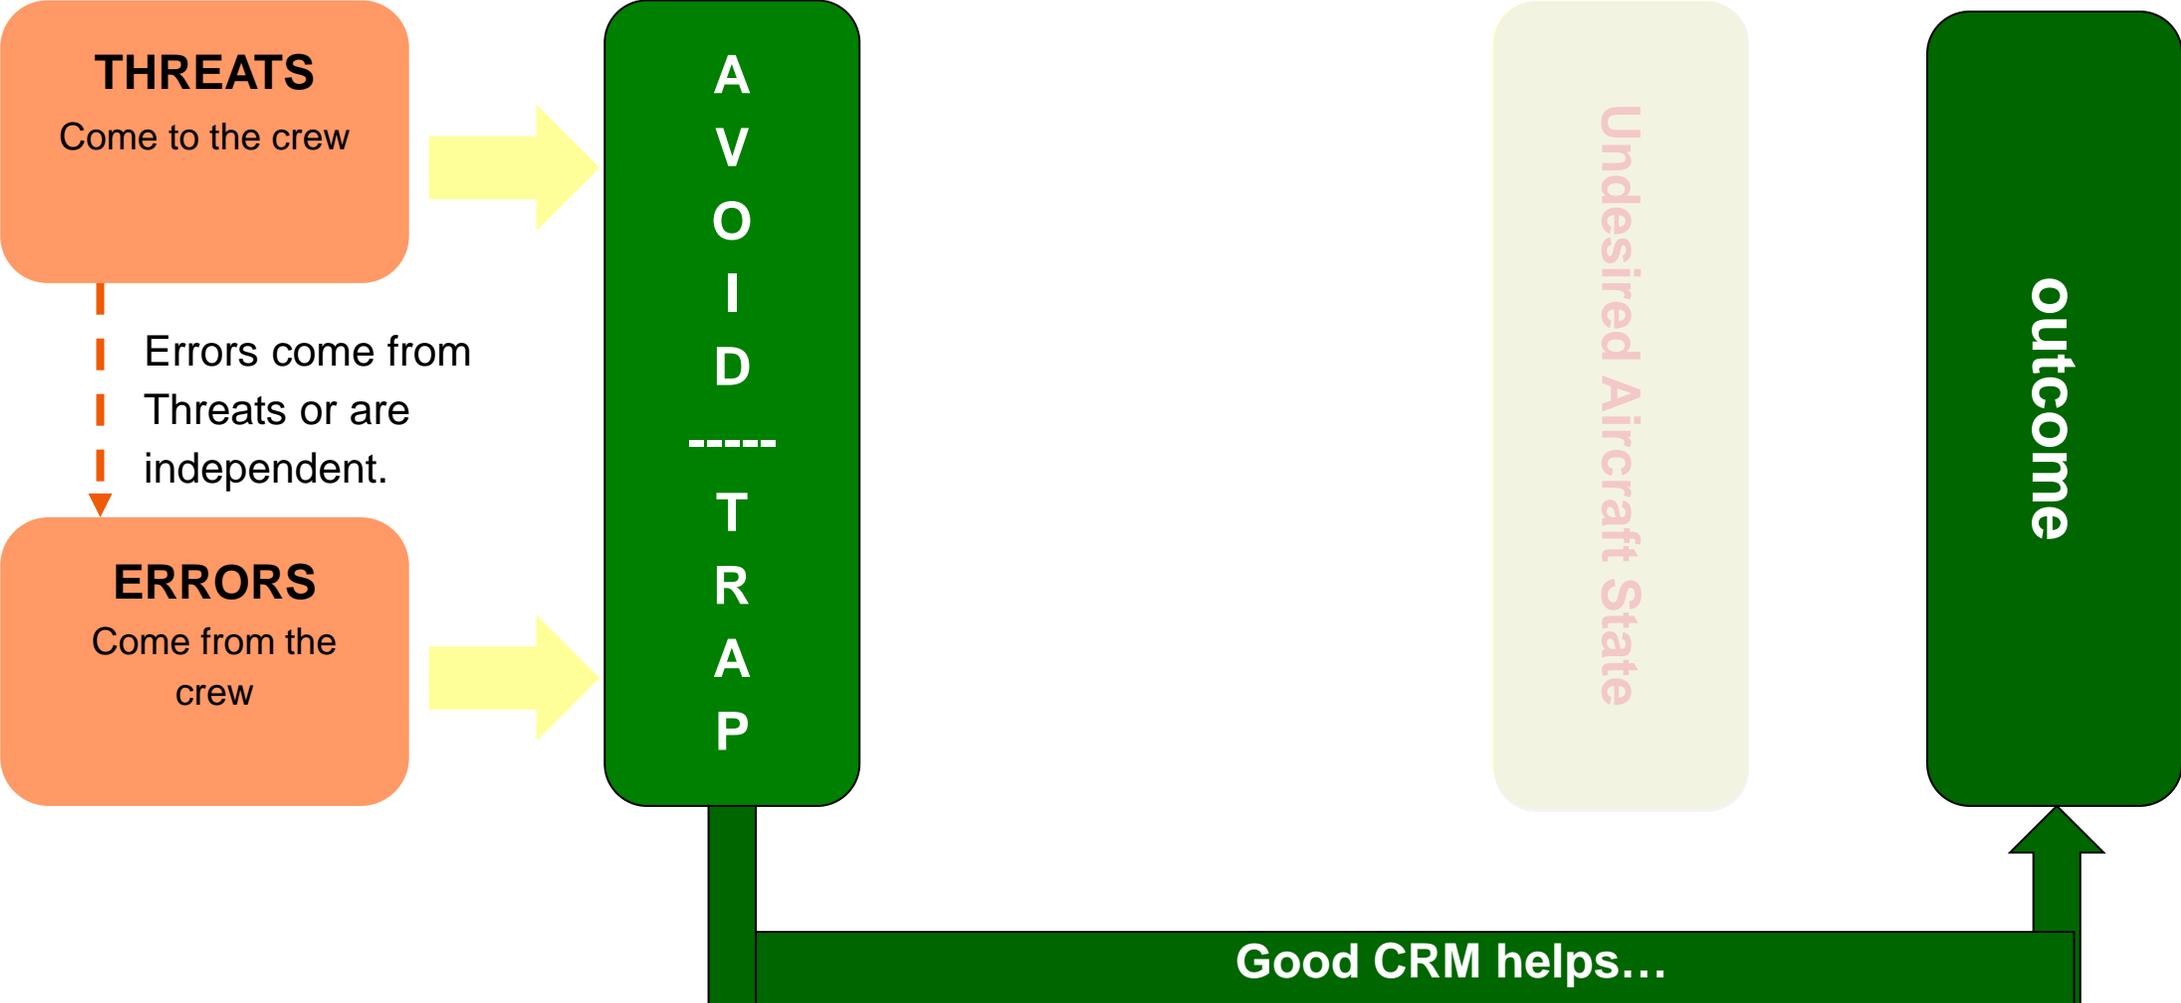

CRM and Threat and Error Management

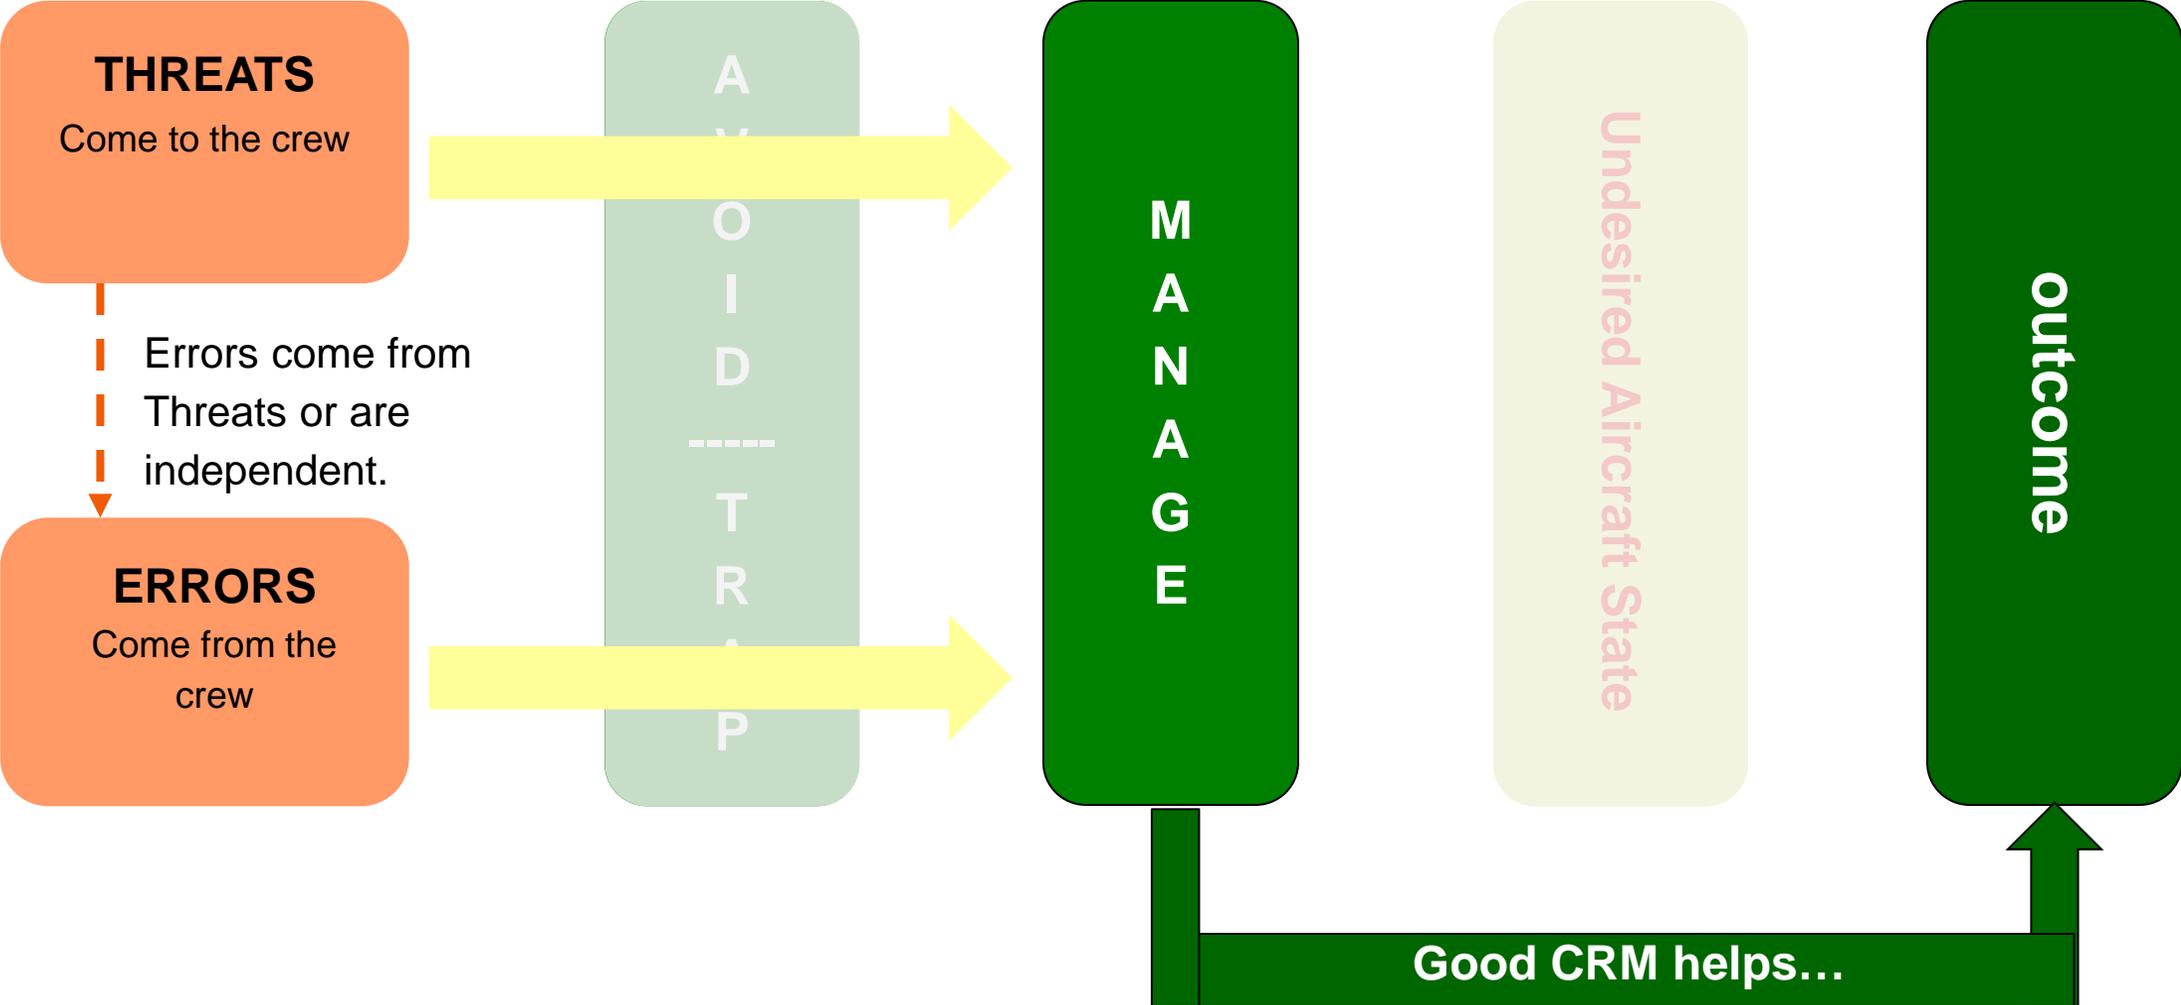

Not avoided, not managed, poor CRM....

Problem solving & Decision Making

HF and CRM

**The Importance of
Human Factors**

Human Factors

**Threat & Error
Management and
CRM**

**CRM Best Practices
PM role**

CRM Best Practices & PM role

CRM Best Practices

- + **Ensure clear delegation of tasks**
- + **Manage** competing activities (i.e., **prioritize**)
- + Use all **appropriate system resources**
- + Use on-board documentation
- + **Assess time-critical** situations
- + **Verbalize** with other crewmember
- + **Manage** risk of **tunnel vision** (narrow-focus)

CRM Best Practices & PM role

Tasksharing - Captain

Leadership role of Captain :

- + Manage priorities
- + Distribute tasks
(if non-standard task sharing)
- + Consult
- + Share situation analysis
- + Decide
- + Assure final authority and decision making
- + Ensure that everyone contributes to communication / information and backup / crosscheck

CRM Best Practices & PM role

Good Monitoring

Requires

+ Knowledge

- + Through Training

+ Experience

- + Application of Knowledge

+ Skill

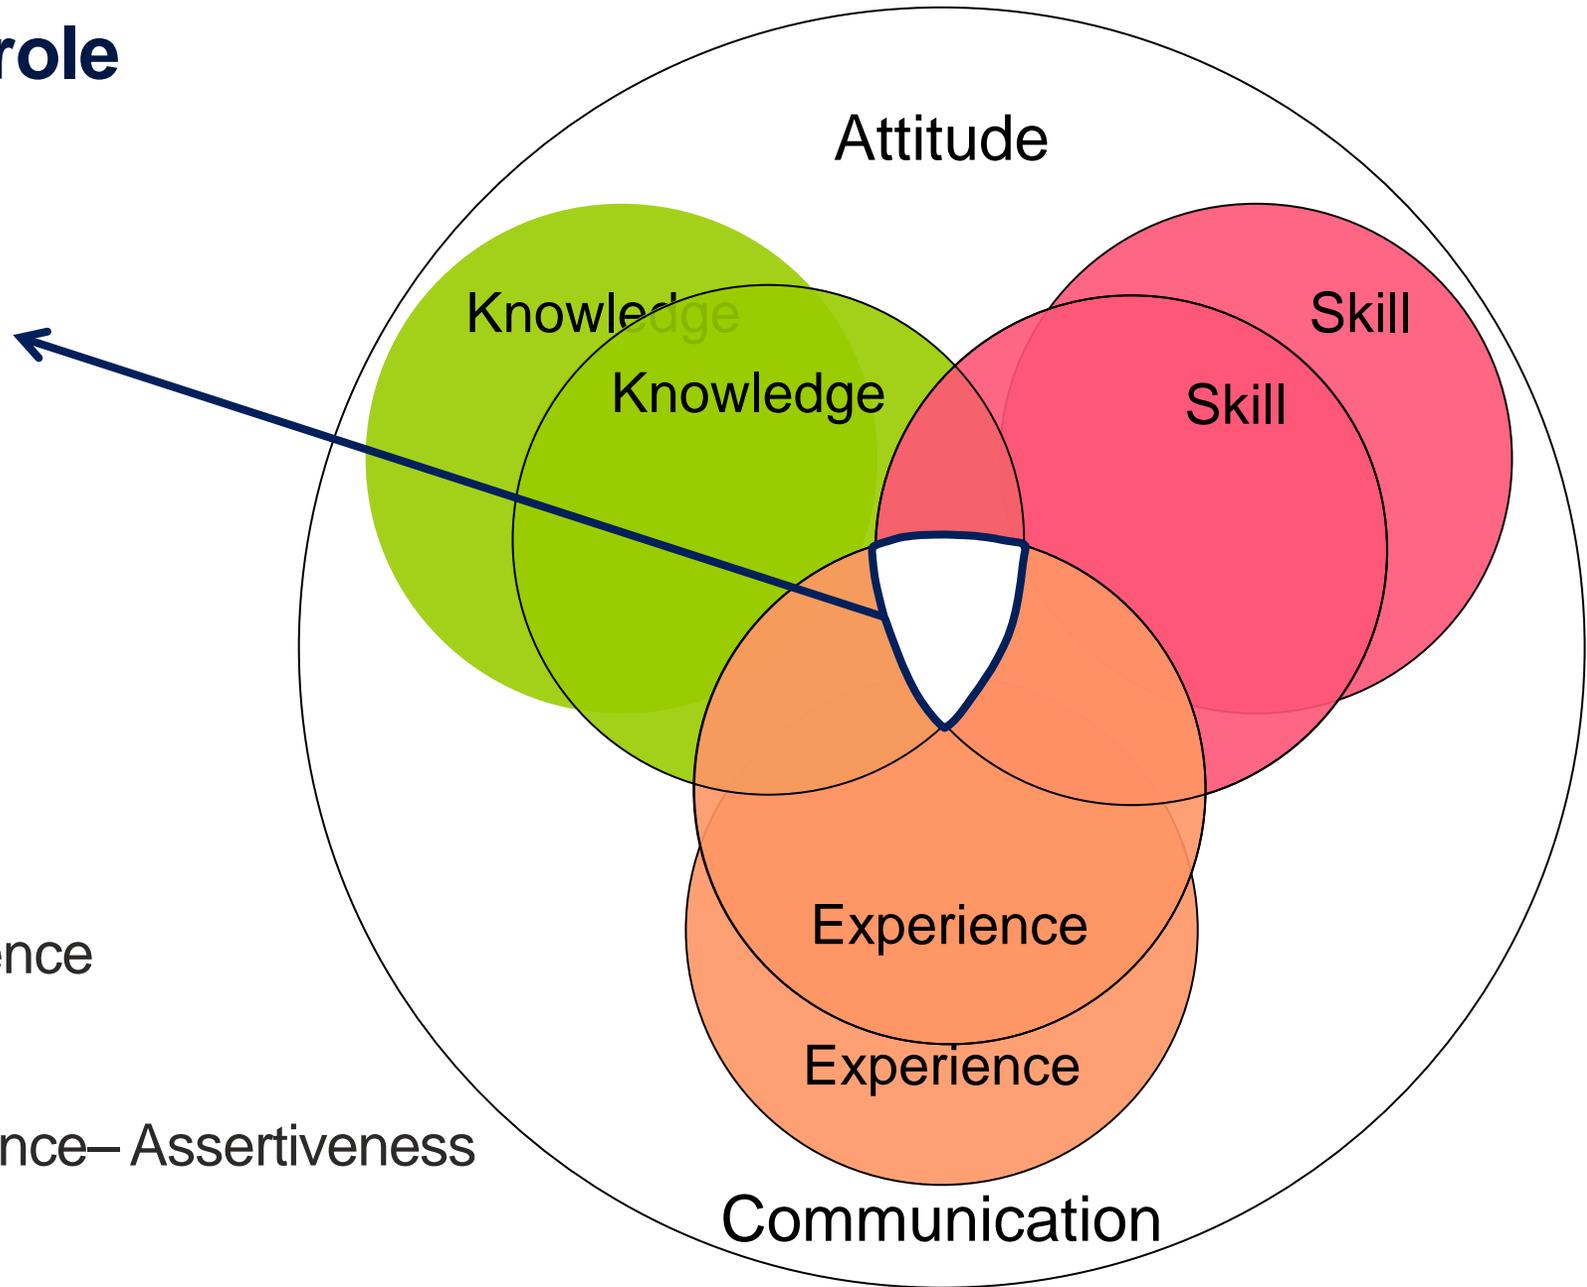

- + Both knowledge & Experience

+ Attitude

- + Conscientiousness— Vigilance— Assertiveness

+ Communication

- + Intra-cockpit / ATC / cabin – Sharing Goals & Intentions

CRM Best Practices & PM role

Tasksharing - PM

› A Key Safety Element in the J. Reason 'Swiss Cheese Model' of Error Detection & Management

Support and monitoring roles of PM:

- + Relay critical information for PF awareness
- + Provide timely inquiry statements before deviations develop
- + Provide standard and excessive deviation callouts (as applicable) and ensure PF response on intended corrective action(s)
- + Propose precise solutions if PF does not respond
- + Provide emergency statement if required
- + Take over control, if conditions warrant such action

CRM Best Practices & PM role

Tasksharing - PM

“Shall we extend gear to reduce speed ?”

“Don't you think we are high and fast ?”

- › Unexpected tailwind
- › Runway condition
- › Visibility change

Information Statements

Inquiry Statements

Solution Statements

Taking over
“Go-around / flaps”

Callouts

Emergency Statement

Take Over

“V DEV, airspeed and GS high, Sir”

“500 ft, not stabilized, Go-around !”

CRM Best Practices & PM role

Training & Evaluating Monitoring Skills

Reinforce the responsibility of PM

- + Explain WHY inefficient monitoring reduces TEM performance

Develop clearly defined PM tasks, Training Objectives and proficiency standards. Ensure Instructors & Evaluators proficiency

- + Explain HOW clearly defined PM standards, training objectives, and instructor proficiency are necessary to enhance pilot's monitoring performance

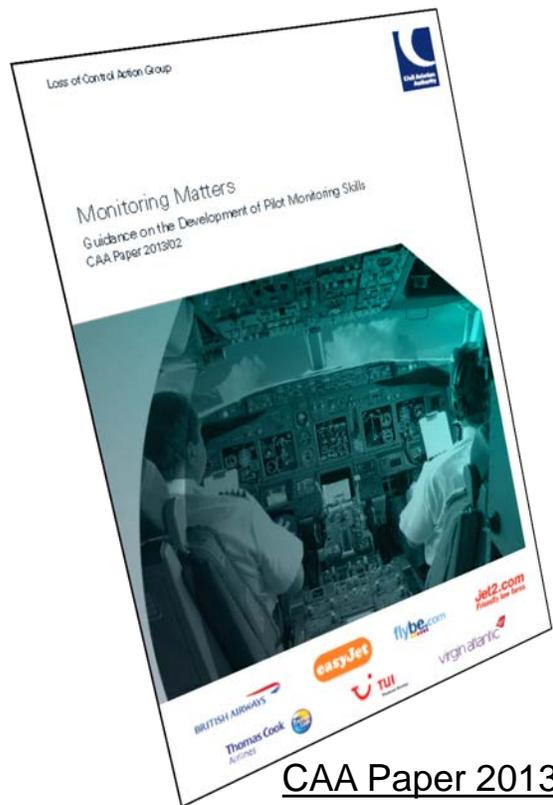

Incorporate Monitoring training into training exercises

- + Suggests methods of incorporating monitoring training into training modules and instructors guides (Refer to Airbus OTT)

What is a Threat?

Threat

+ “Events, or errors, that occur **beyond the influence of the crew**, increase operational complexity and workload, and **which must be managed to maintain safety margin**”

Threats come **to the crew**

CRM and Threat and Error Management

What is an Error?

Errors →

- + “Actions or inactions by the Flight Crew, that lead to **deviations** from organizational or Flight Crew intentions or expectations”
- + Errors are: spontaneous, linked to threats, or can be part of error chains.”

› Errors come from the crew

What is a Hazard?

- + “A condition or an object with the **potential** of causing :
 - + Injuries to personnel
 - + Damage to equipment or structures
 - + Loss of material, or
 - + Reduction of ability to perform a prescribed function.”

ICAO (SMM 3rd version)

› In TEM Concept **Threats** & **Errors** are considered as **Hazards**

What is an Undesired Aircraft State?

UAS

UNDESIREDCRAFT STATE

- + “**Flight Crew-induced** aircraft position or speed deviations, misapplication of flight controls, or incorrect systems configuration, associated with a **reduction of safety margins**”
- + Undesired aircraft State is **not an outcome**:
 - + It is a transitional situation between normal situation and outcome.
 - + **Restoring margins of safety is still possible.**
