Cabin Crew procedures to identify, evaluate and manage passengers with a suspected communicable diseases

EGYPTAIR 

- Guidance material disseminated to crew members for specific public health measures for passengers suspected with Virus Disease (VD)(e.g. Ebola)
- Distancing other passengers if possible away from the symptomatic passenger (re-seating); while allocating infected passengers seats, preferably near a toilet, for their exclusive use.

- Covering nose and mouth of the infected passengers with a surgical facemask.
- Limiting contact with passengers to the minimum necessary. Designated , one or two cabin crew members to provide assistance, service if needed. Immediate notification to Pilot in command.
- Hand washing with soap after any direct or indirect contact with the suspected infected passenger.

- Immediate isolation of passenger upon arrival & to be the last passenger to leave the aircraft.
- Passengers seated in vicinity, including seated across the aisle, of the suspected infected passenger and those who were in direct contact, would be the main source of transmission of Virus Disease (VD)(e.g Ebola) , therefore shall be included in the contact tracing list.
