MIDAD

A Service Driven Solution

MIDAD

- Having the experience from past – implement a service for future.
- Opportunity and responsibility to cover elements and scope that is wider than current AIS.
- Understand the needs of originators and users throughout the data chain, and continue doing so in future.

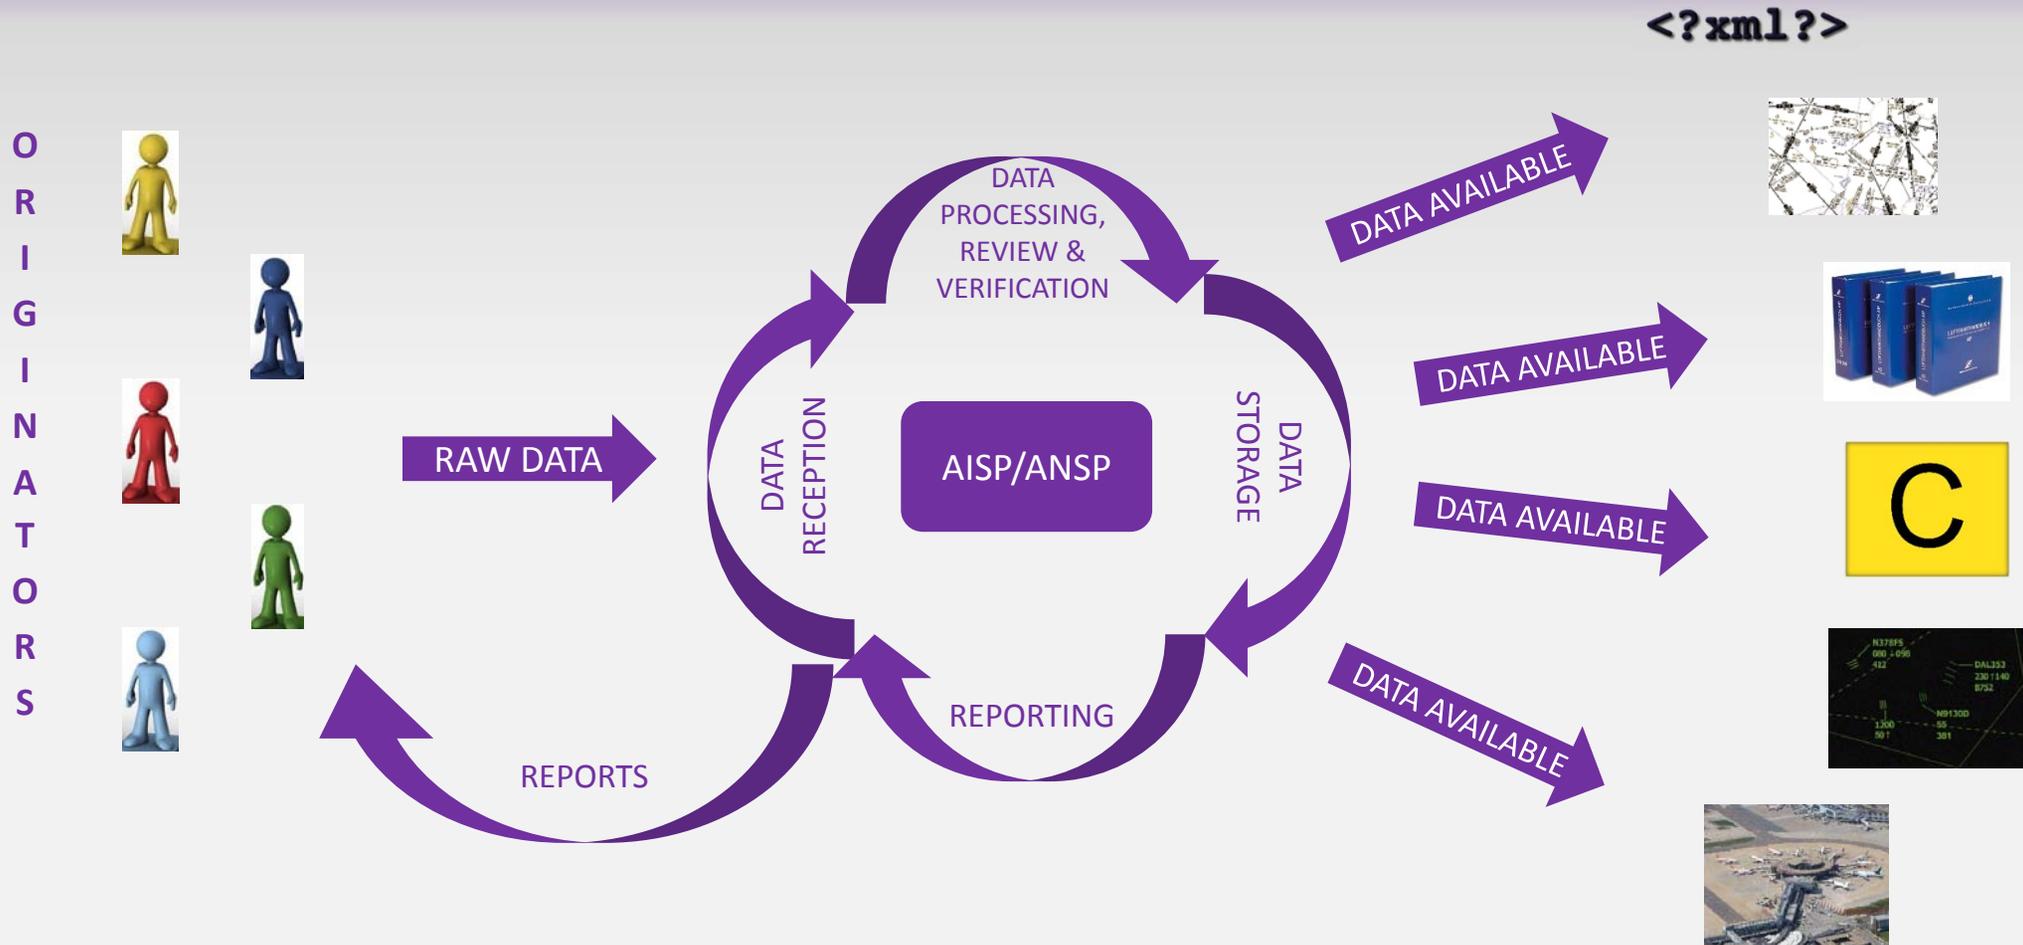

HOW??

WHO??

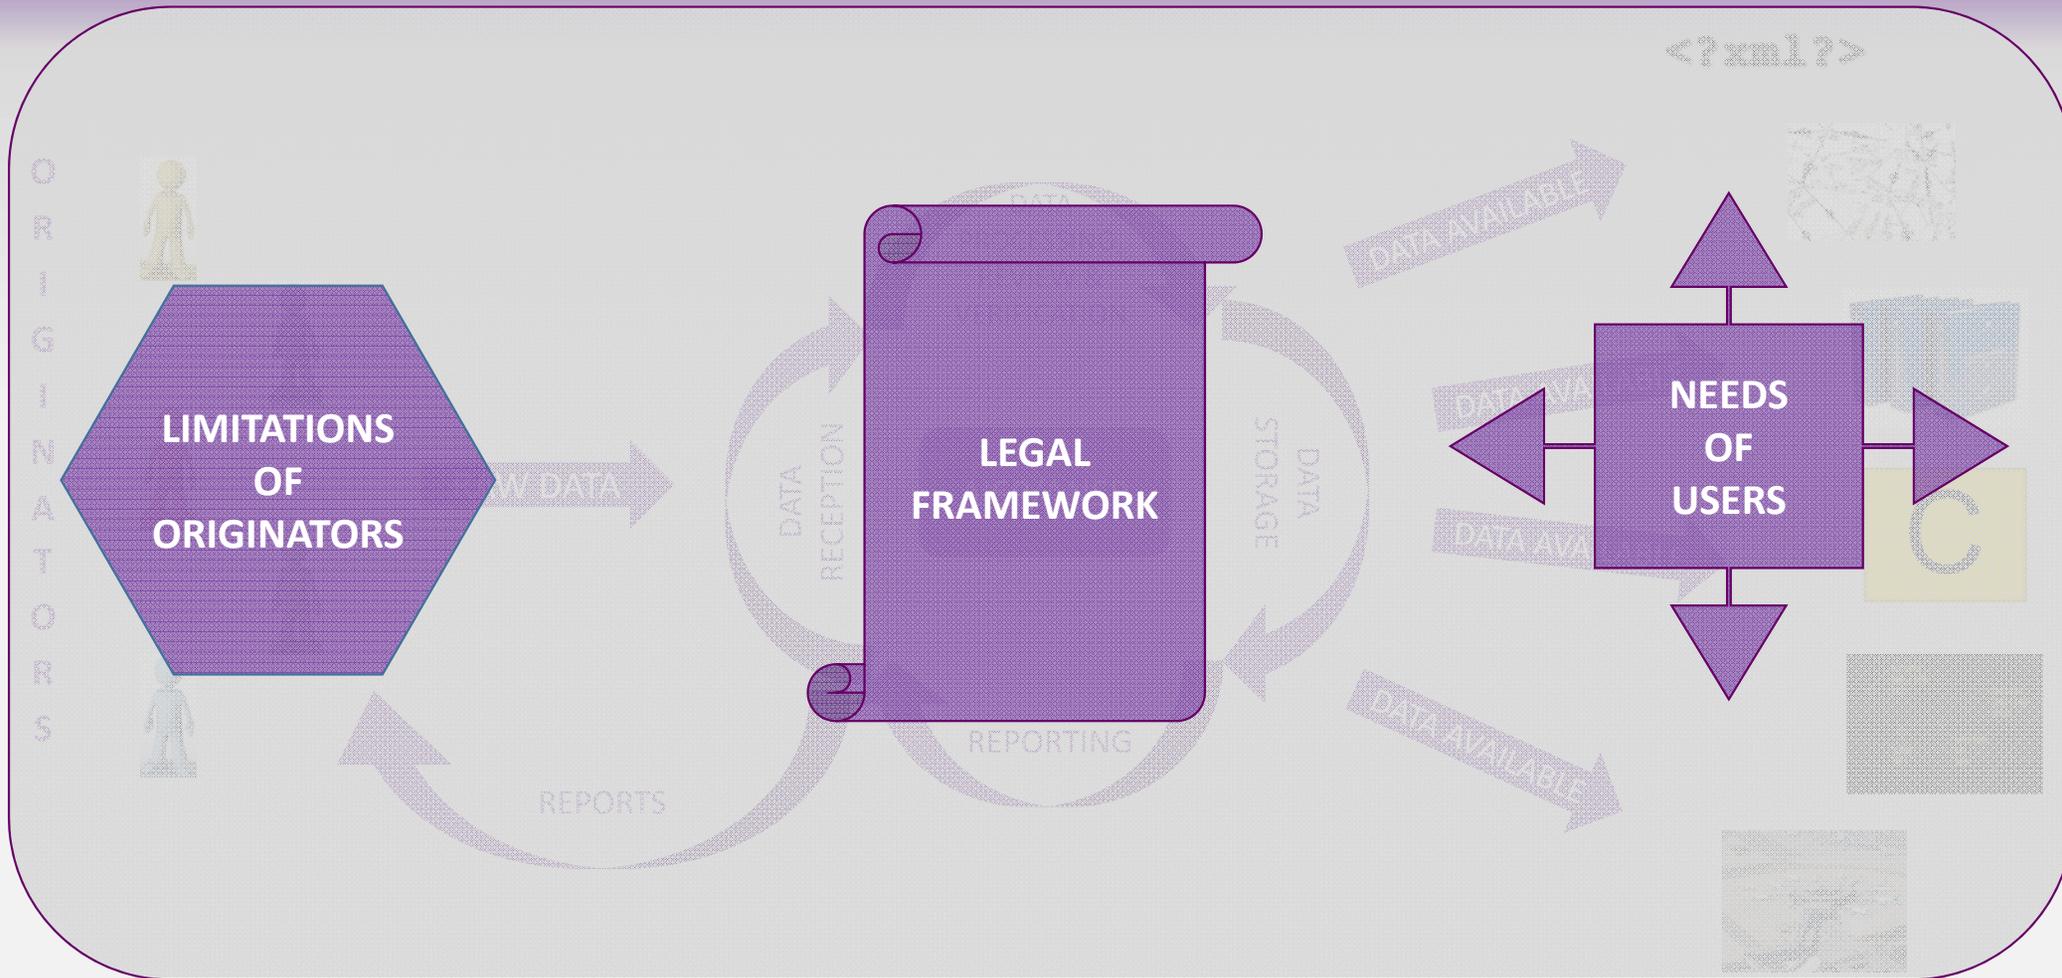

The Aeronautical Data Chain

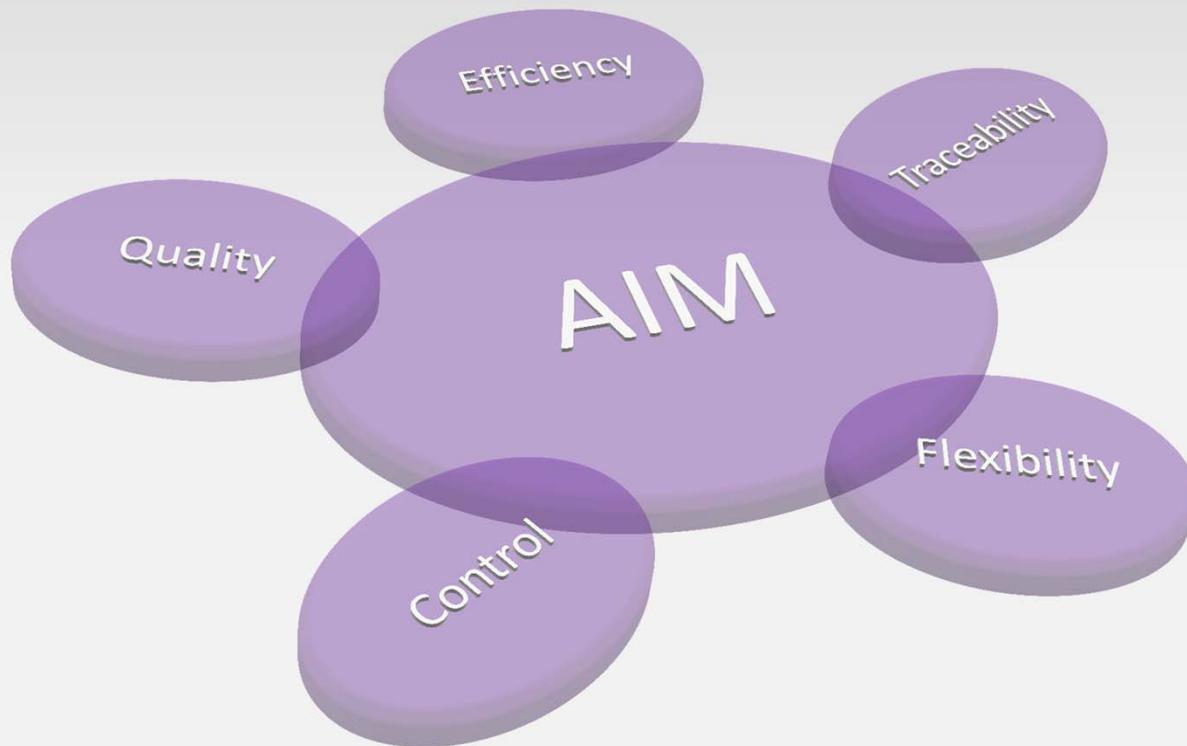

<?xml?>

The Aeronautical Data Chain

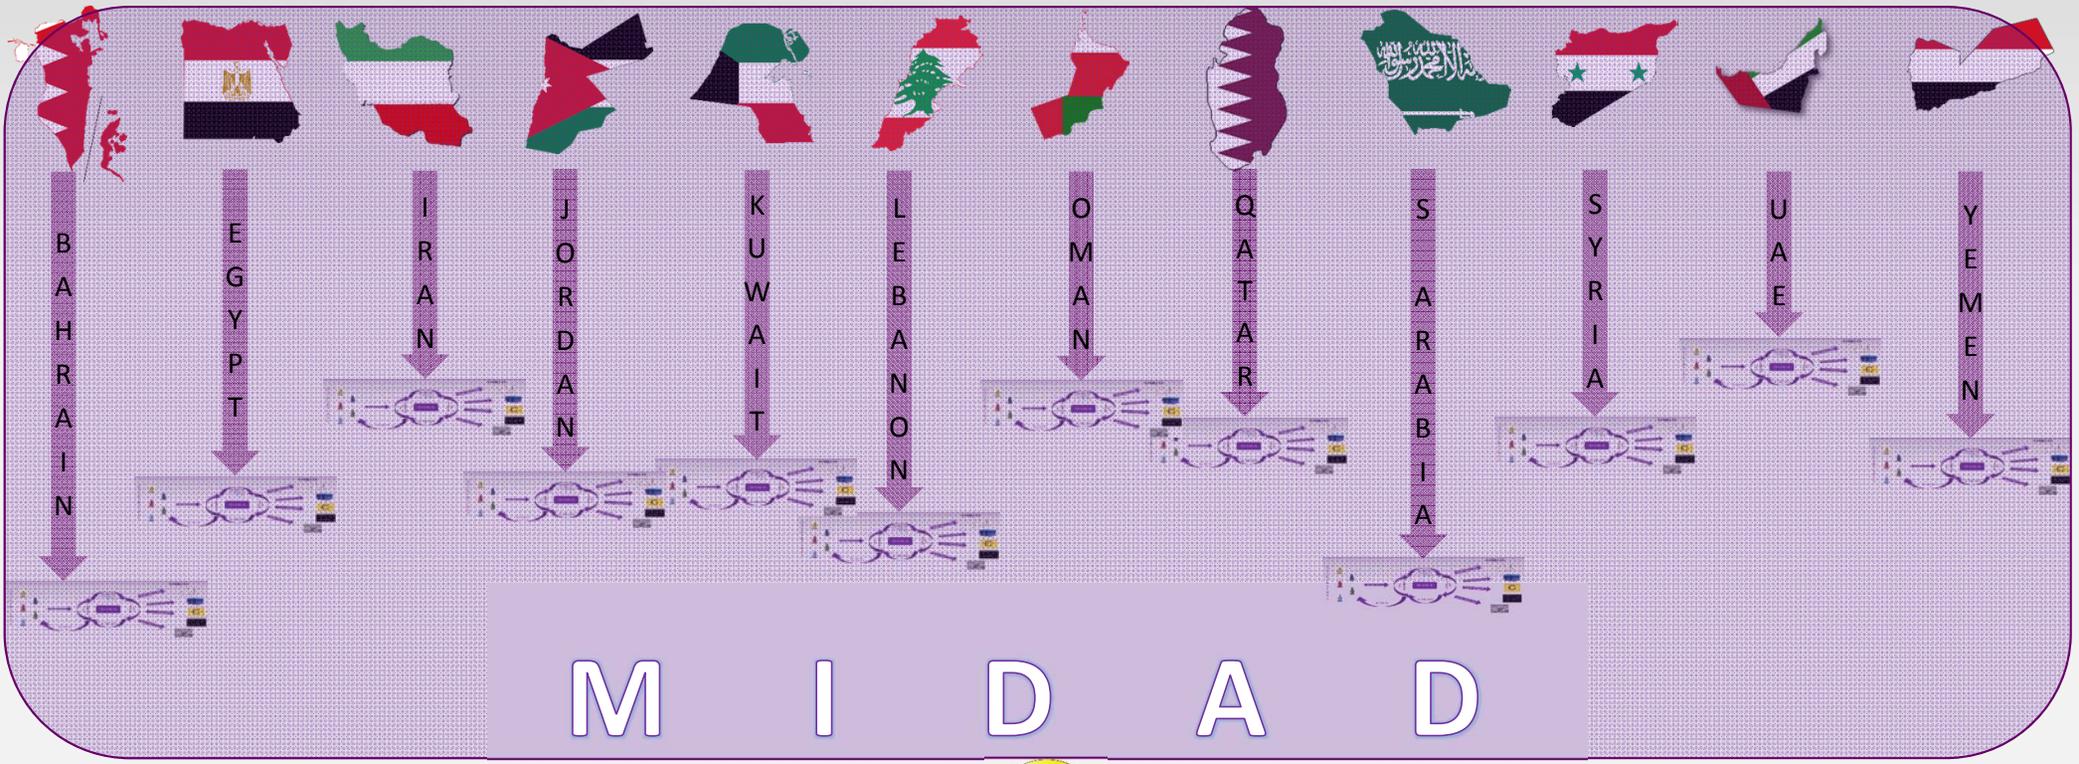

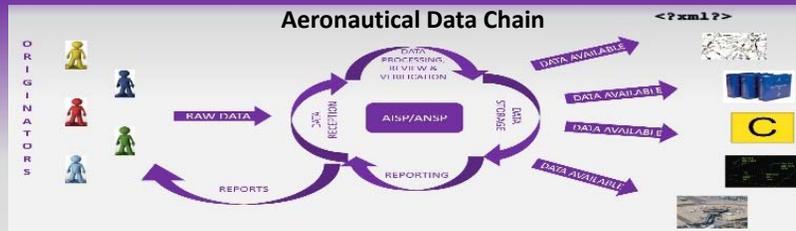

MIDAD

MIDAD is an opportunity to create a service where **AIM is an enabler** for the users and the originators.

Aeronautical information services will be moved from publication managers to information enablers.

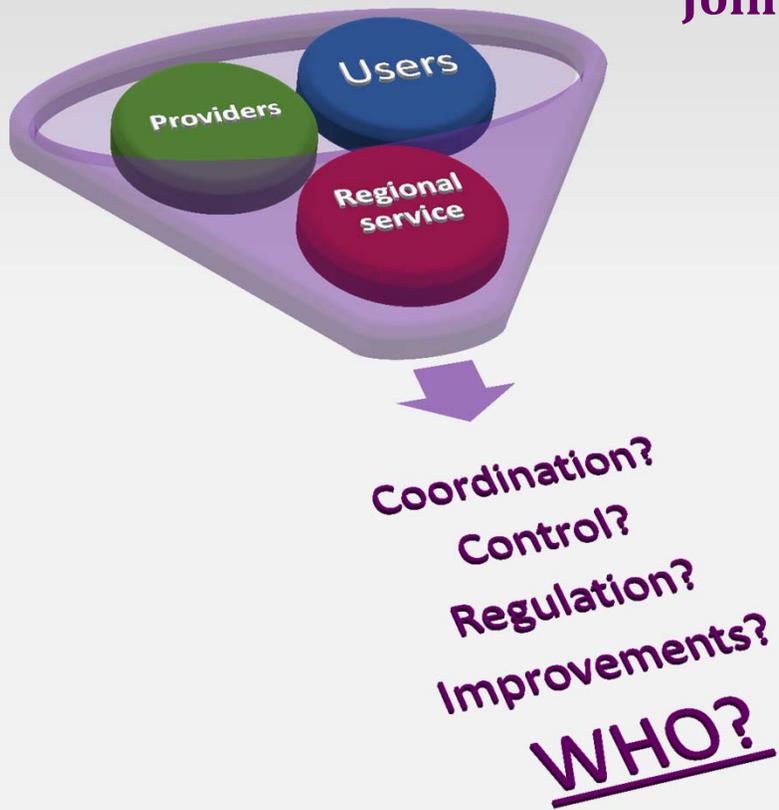

MIDAD - A Service Driven Solution

Satisfied User

MIDAD - A Service Driven Solution

Joint solution = Joint service

Joint service = Joint management

Solid foundations

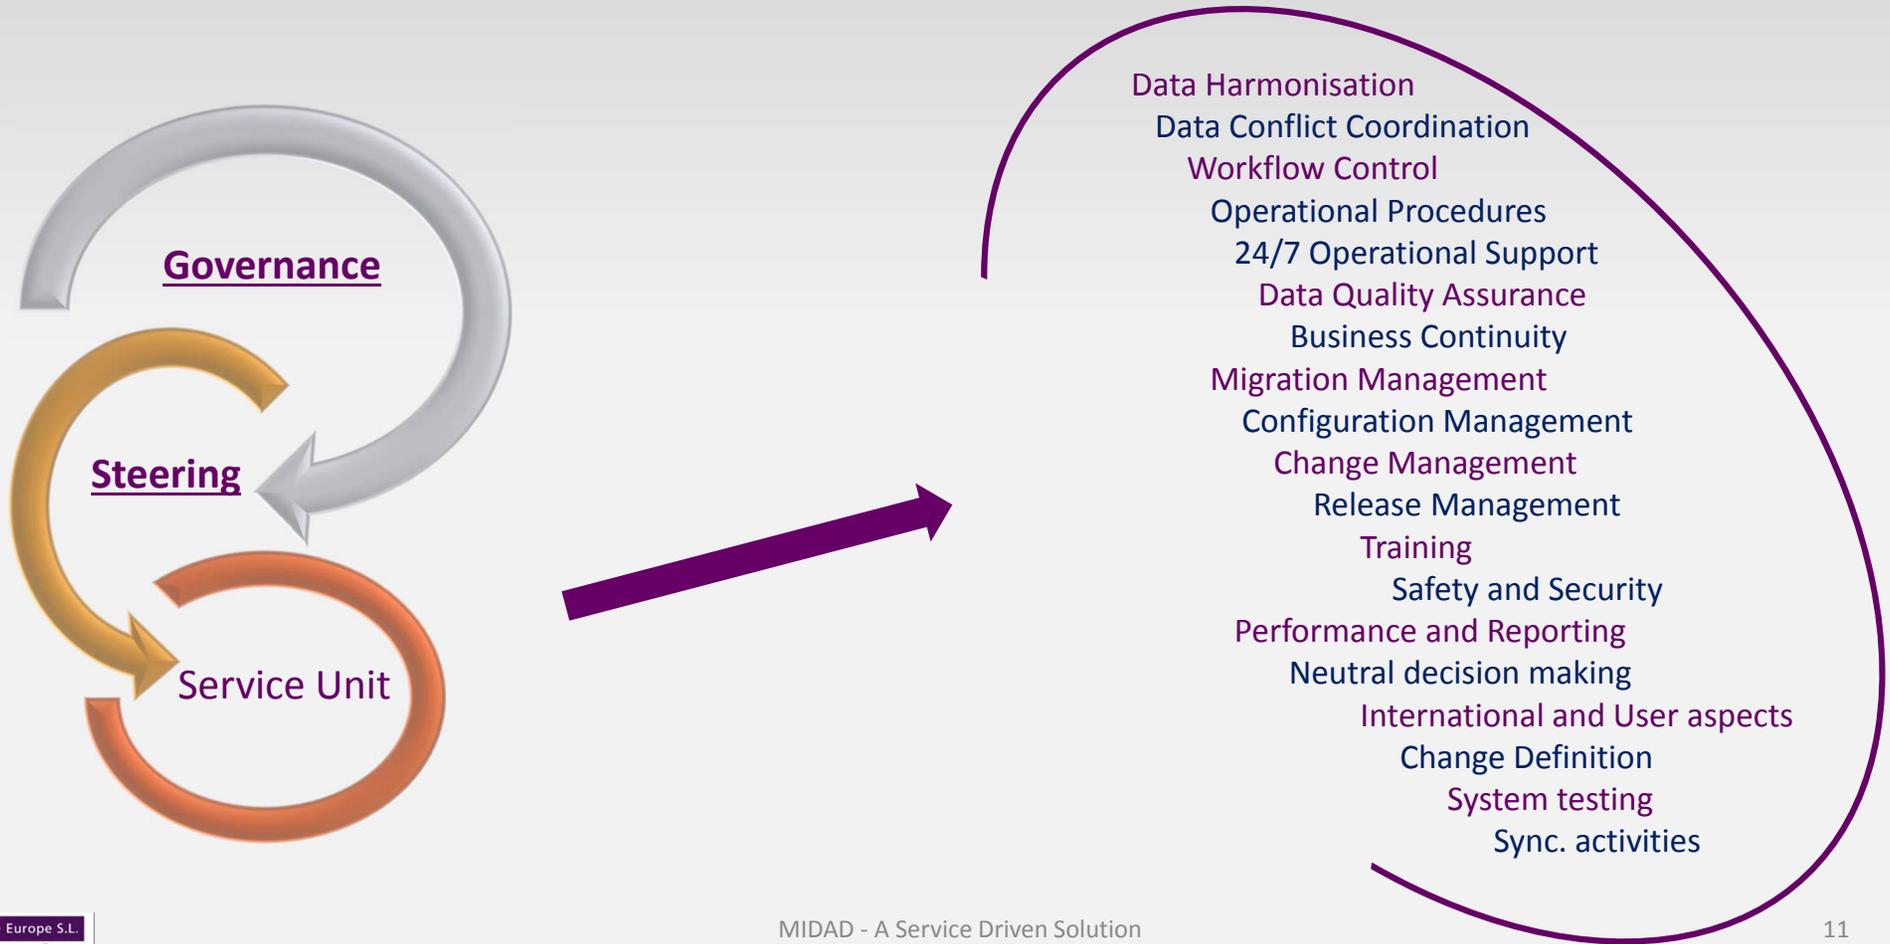

Evolution and Improvements

While participating on a joint service, the national regulations and requirements still need to be met. Coordination and cooperation is key.

- How to make sure all participating states contribute and deliver according to agreed processes? How to make sure operations is neutral, service, data and product focused and all participating actors are handled with same standards?
- How to make sure that MIDAD continues with the same focus and principles over time? Continuously covering both and national and international requirements.
- How to ensure that MIDAD does not create additional (unnecessary) workload for participating states?

MIDAD Service Unit

A neutral body representing all states that supports the MIDAD
