

US Safety Management Activities

Presented to: Safety Management Workshop, Kuwait

Presented by: Aaron Wilkins, FAA

Date: May 25 - 27, 2015

Federal Aviation
Administration

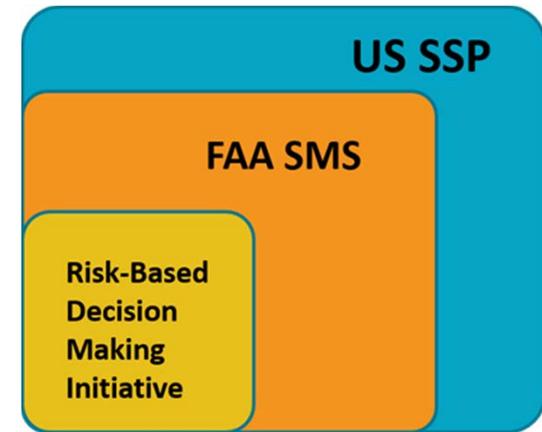

Agenda

1. **US State Safety Program (SSP)**
2. **FAA Safety Management System (SMS)**
3. **SMS and the Aviation Industry**
4. **International Collaboration**

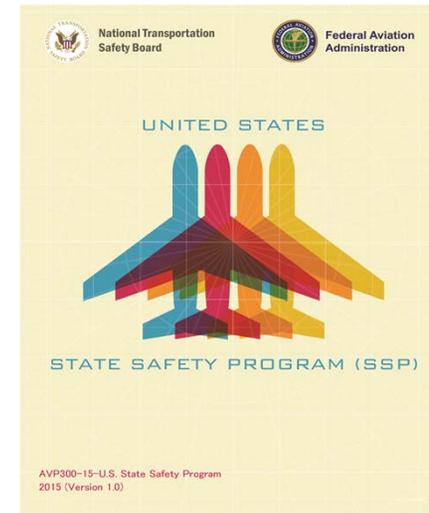

Overview of Safety Management Activities

- The U.S. SSP provides the overarching framework for our safety system
- The FAA SMS provides the details of our approach to safety management, showing how we will meet most of the tenets of the U.S. SSP
- The Risk-Based Decision Making Initiative enables the FAA SMS by putting in place the tools and processes to proactively address emerging safety risk using consistent, data-informed approaches to support system-level, risk-based decisions

U.S. SSP Document

- Published early this year, describes how the US meets the 11 ICAO SSP Framework elements
 - US currently meets SSP intent and most elements, including through implementation of FAA SMS and SMS in the LOBs
- Focuses on roles of FAA and NTSB
 - Although multiple US Government agencies may contribute to US SSP
- *Foreword*, signed by the FAA Administrator and NTSB Chairperson
- Will be reviewed on a regular basis to ensure it reflects evolving aviation safety standards and practices

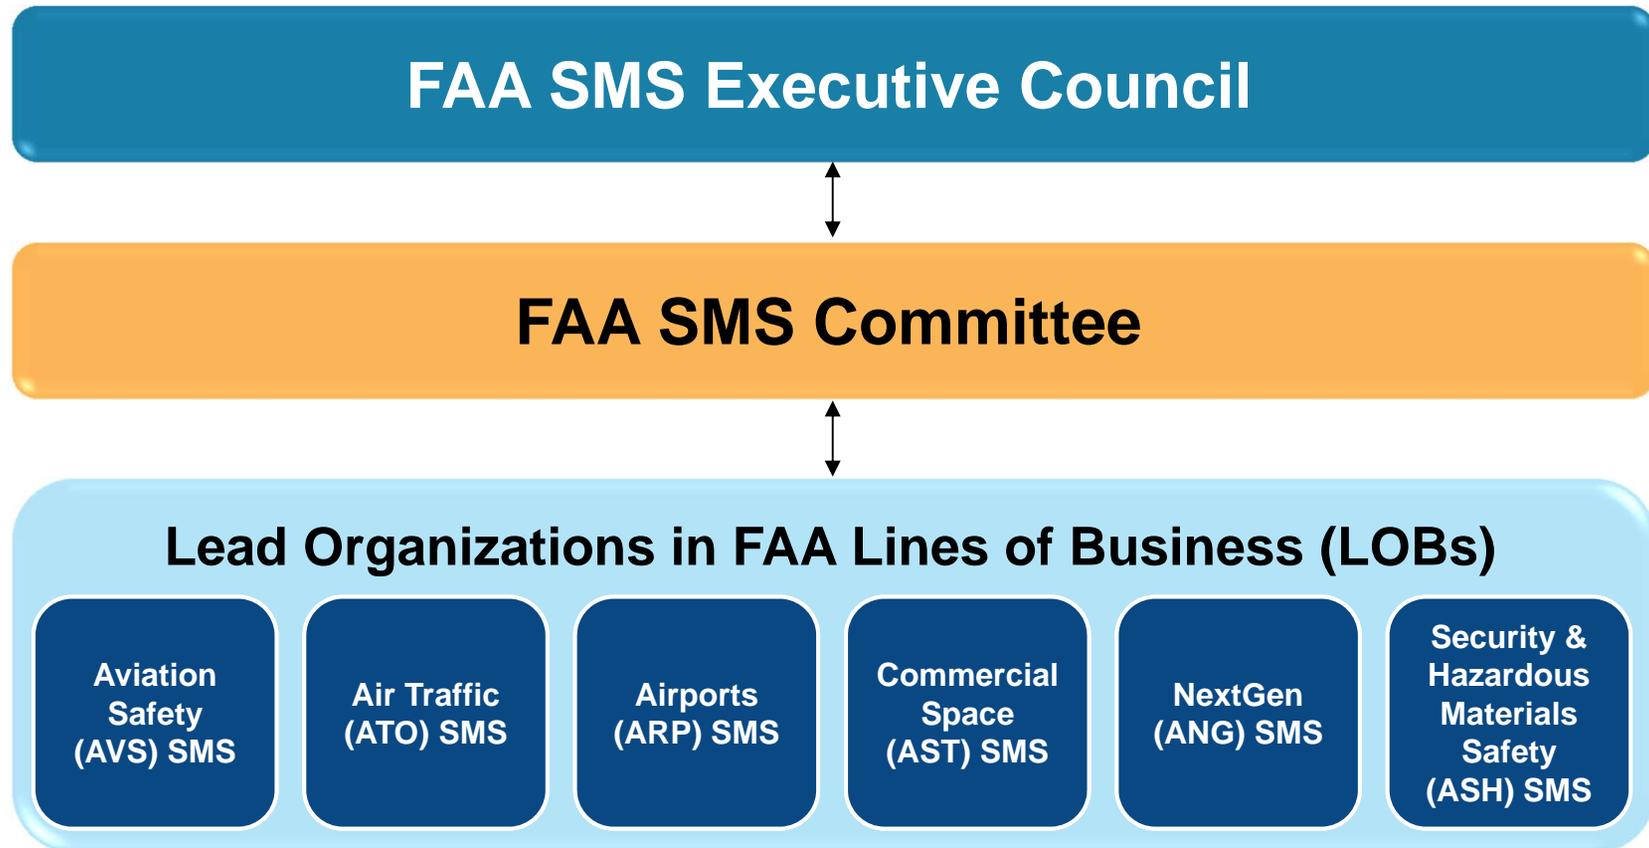

Additional SSP related Activities

US elected to further enhance our SSP by incorporating safety management concepts into our internal processes

- Joint Planning and Development Office (JPDO) SMS Standard
- Department of Transportation (DOT) Safety Management Systems Guidance Document
- FAA SMS Policy and Guidance
- FAA SRM Policy and Guidance
- AVSSMS Requirements Order
- ARP SMS Order
- FAA AVS and Airports SMS rulemaking activities

Management Structure

Why Has the FAA Adopted SMS?

- Aviation system is changing rapidly
- Repetitive, recurrent common cause accidents (low hanging fruit) essentially eliminated
- Increase in system demand
- Continues evolution in application of system safety concepts in the aviation system

What Do You Get from an SMS?

- Repeatable, proactive, and systematic processes used to manage safety
- Safety Risk Management (SRM) decision making processes that are structured, consistent, defensible, measurable, and data-driven
- Proactive SRM which facilitates identification of hazards and development of risk controls prior to event occurrence
- Demonstrated safety management performance that enables proactive risk management
- Framework to support a sound safety culture

The Four SMS Components

Safety Policy

Establishes senior management's commitment to continually improve safety; defines the methods, processes, and organizational structure needed to meet safety goals

Safety Assurance

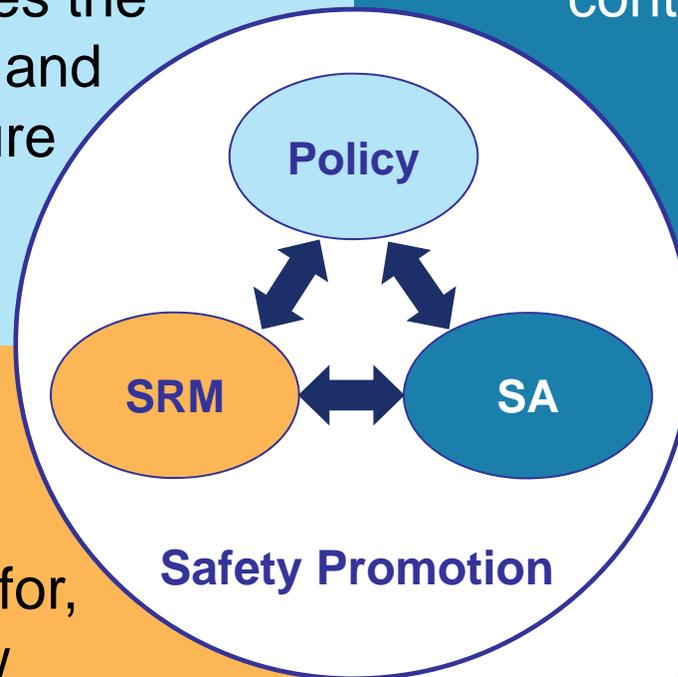

Evaluates the continued effectiveness of implemented risk control strategies; supports the identification of new hazards

Safety Risk Management

Determines the need for, and adequacy of, new or revised risk controls based on the assessment of acceptable risk

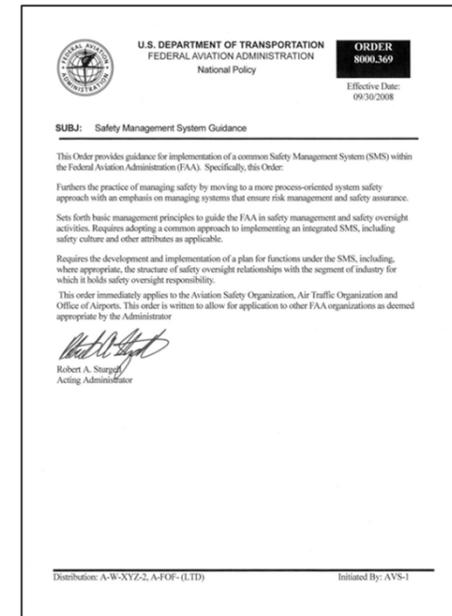

Safety Promotion

Includes training, communication, and other actions to create a positive safety culture within all levels of the workforce

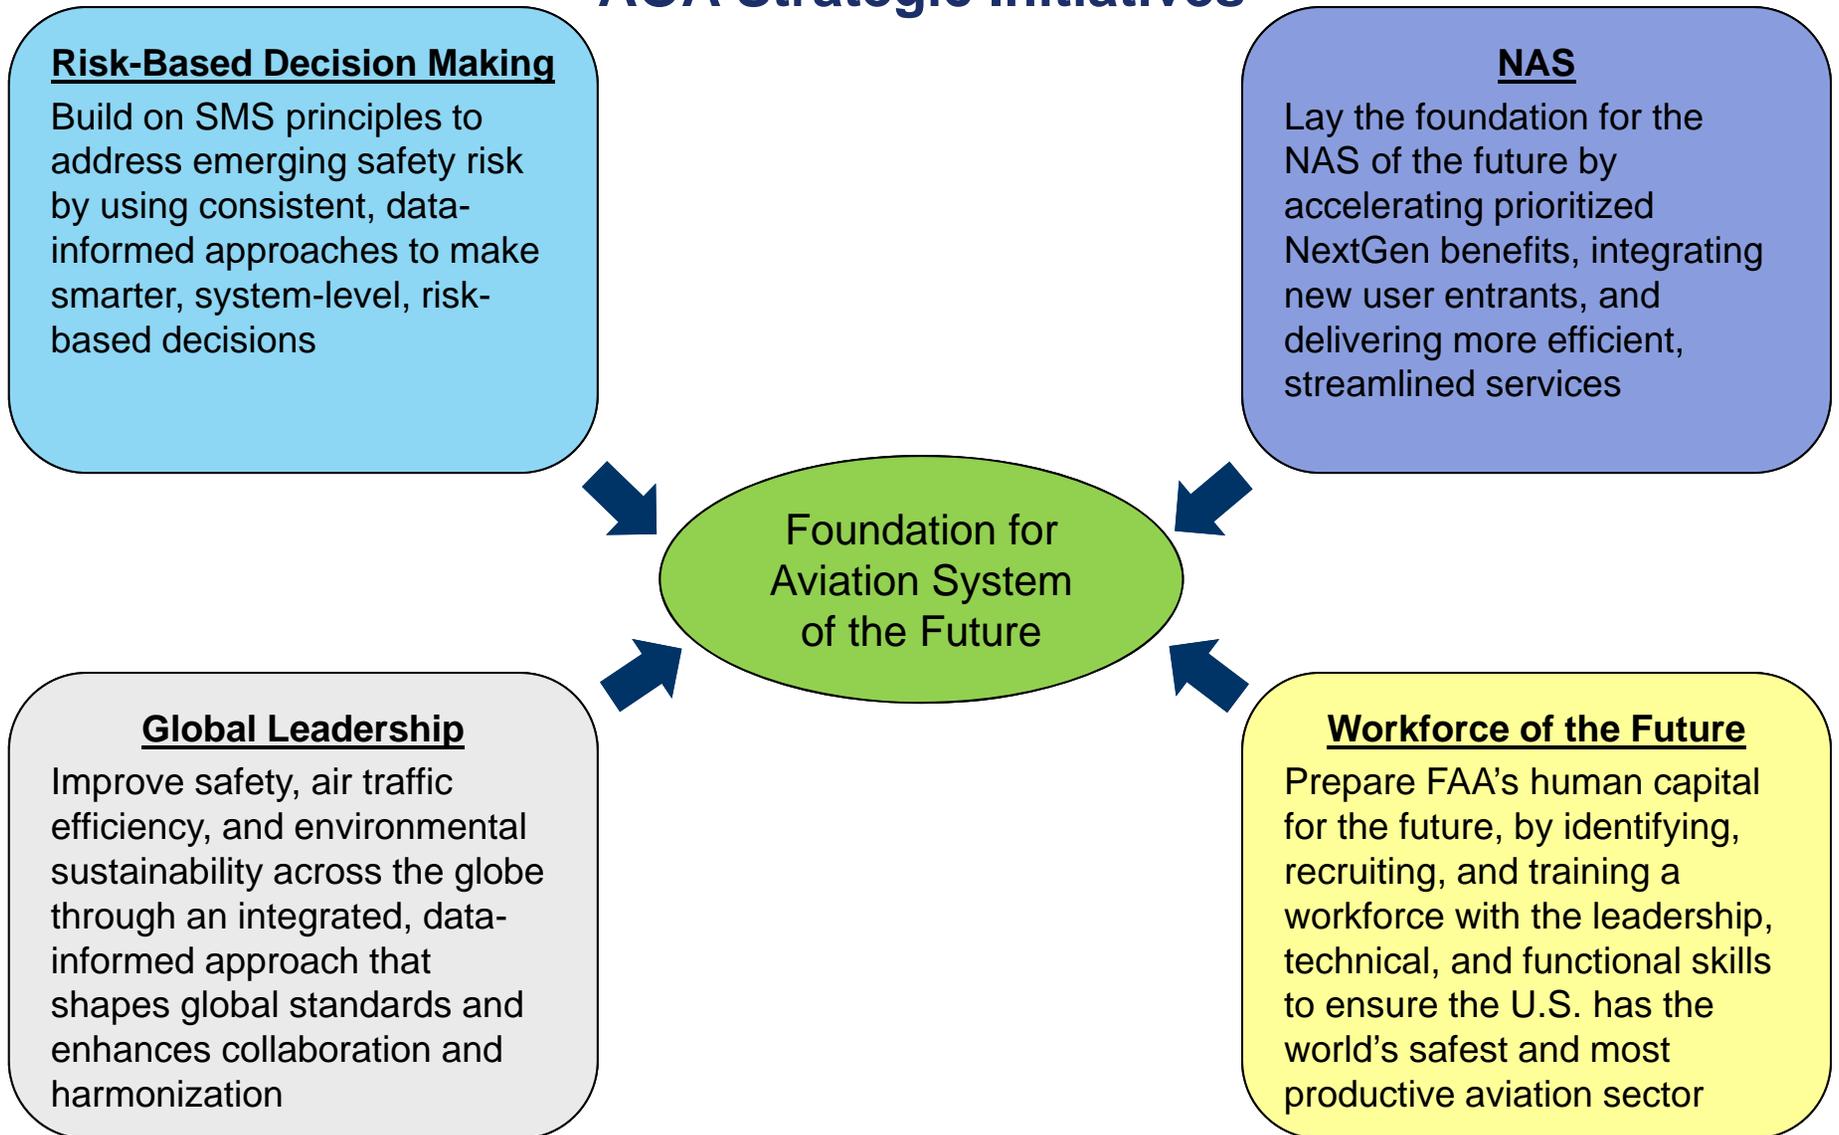

FAA SMS Order

- FAA Order 8000.369A, *Safety Management System Purpose*:
 - Ensure commonality and alignment of SMS implementation across the FAA
- Content:
 - Explains the SMS principles and requirements
 - Establishes the FAA SMS Executive Council
FAA SMS Committee
 - Standardizes terminology for SMS
 - Requires FAA organizations to:
 - Establish guidance for their own SMS activities and their industry segment on implementing SMS
 - Develop and maintain SMS implementation and/or continuous improvement plans

AOA Strategic Initiatives

Risk-Based Decision Making Sub-Initiatives and Activities

1 Improve standardization, data access, and modeling integration

- Taxonomies
- Modeling
- Greater data access
- Hazard tracking
- Safety data and risk analysis competencies and skills

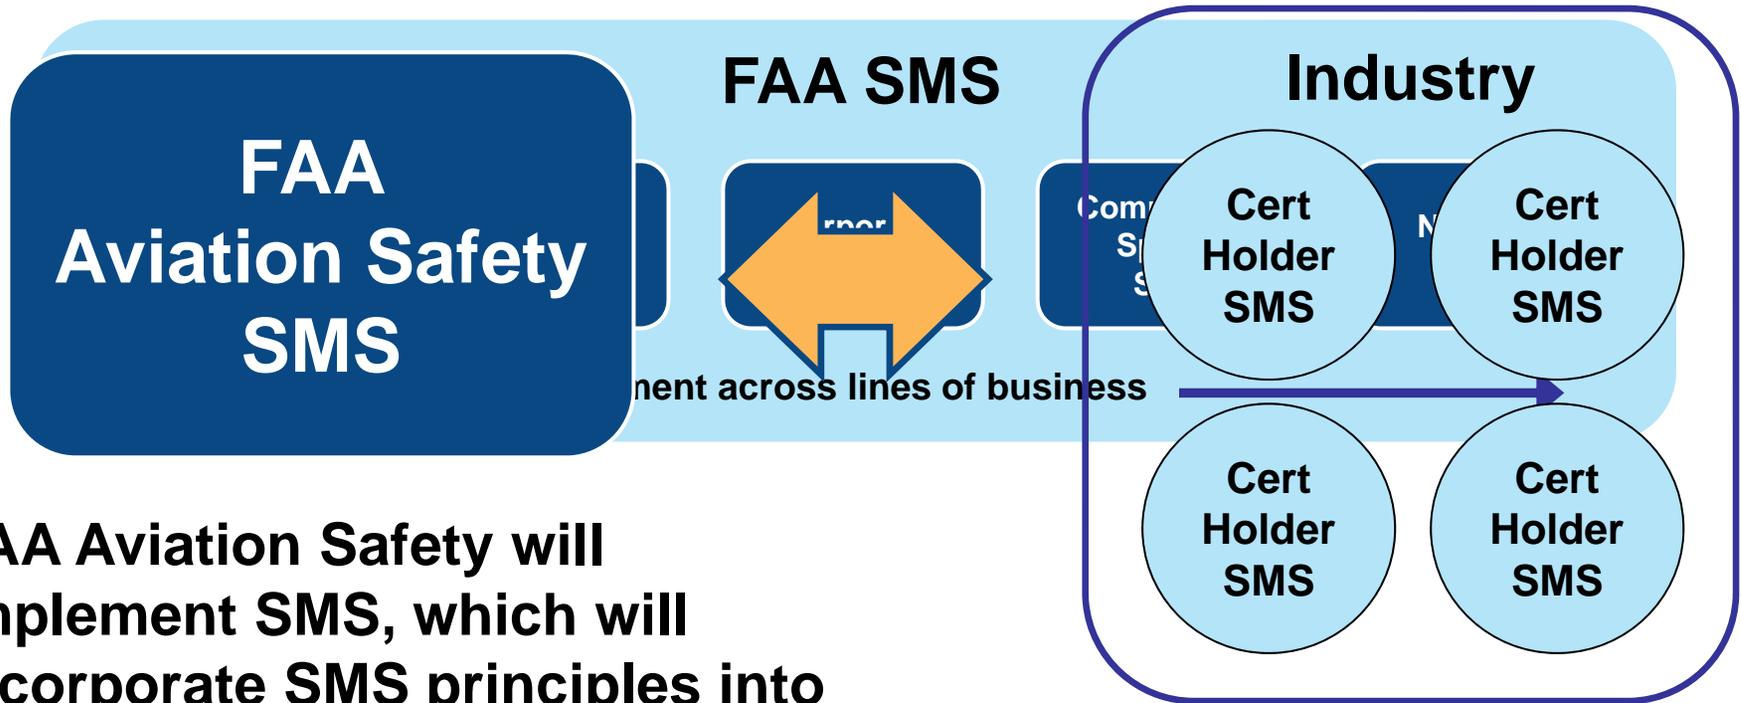

2 Enhance decision making process

- Identify safety hazards of planned changes
- Identify and mitigate safety risk of existing cross organizational issues
- Changes to FAA SMS decision-making and governance structure

3 Evolve the Safety Oversight Model

- Leverage industry's use of safety management principles; exchange safety management lessons learned and best practices

Safety Management Vision

FAA Aviation Safety will implement SMS, which will incorporate SMS principles into FAA Aviation Safety operations. FAA Aviation Safety SMS and industry Cert Holder SMS will be aligned to share data/information, reports of safety risk analyses, etc. used to move effectively and efficiently manage the risk industry. The purpose of the safety of the operations in their operations.

FAA SMS Industry Outreach

- SMS Regulations - Part 5 Rule
 - SMS Requirements for large air carriers implemented in January 2015
- FAA Flight Standards Service SMS Pilot Projects
 - Since 2007, includes airlines, maintenance providers and training organizations
 - SMS Focus Group (SMSFG) provides a two-way communication mechanism between the SMS Program Office and participants in voluntary implementation
- FAA Airports has initiated two pilot studies in cooperation with airports holding an operating certificate
 - Since 2007, multiple airports with varying levels of operations have participated in these studies
 - Range from the development of a SMS Manual and Implementation Plan to Proof-of-Concept studies
- FAA Aircraft Certification Service has also implemented pilot projects for manufacturers and Aviation
- Rulemaking activities undertaken for design and manufacturing organizations, and airports

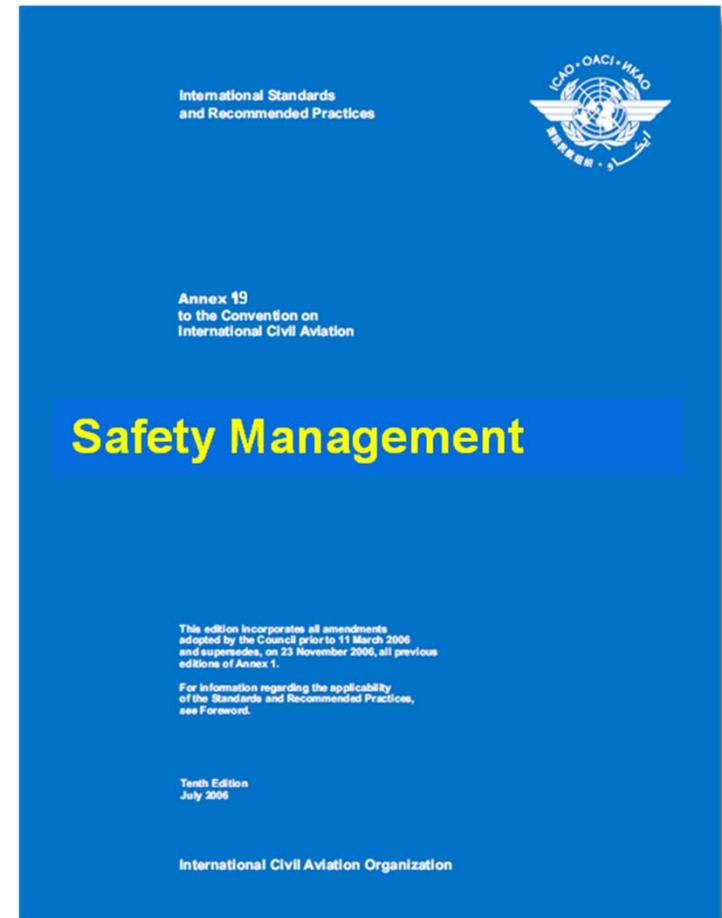

SMS Rule Status

- Final rule published on January 8, 2015 requiring operators authorized to conduct operations under part 121 to develop and implement an SMS
- Requires certificate holders under part 119 authorized to conduct operations in accordance with the requirements of part 121 to have an SMS by March 9, 2018
 - Certificate holders must submit an implementation plan by September 9, 2015
 - The implementation plan must be approved no later than March 9, 2016

Annex 19 - Safety Management

- First new ICAO Annex in over thirty years
- Will define the safety management and oversight responsibilities of member States
- Vehicle that will allow for the integration of the safety management functions of a State

Two Phase Development

- Phase 1:
 - Consolidation of existing safety management provisions in various Annexes into the new Annex
 - Transfer or duplication of existing safety management related content
 - Modifications to improve the language for clarity
 - Modifications to ensure standardization and harmonization
- Phase 2:
 - Development of further safety management provisions arising from priorities identified by SMP as well as inputs from the ANC and member States

Phase 1 Complete

- Annex 19, Safety Management is complete
 - Adopted by the ICAO Council in February 2013
 - Effective in July 2013 (published)
 - Applicable to Member States in November 2013

SMP Work Program for Phase 2

- Further SMS and SSP development, including better linkage between the SSP and Safety Oversight
- The SMP also recommended addressing:
 - Data protection
 - Accident investigation links
 - Guidance material
 - Implementation issues
- SMP delivered its recommendations for the next iteration of Annex 19 to the ANC in November 2014
- Currently, SMP is developing guidance material.

Safety Management International Collaboration Group (SM ICG)

- Purpose: to promote a common understanding of safety management principles and requirements, facilitating their application across the international aviation community
 - Collaborate on common SMS/SSP topics of interest
 - Share lessons learned
 - Encourage the progression of a harmonized SMS
 - Share products with the aviation community
 - Collaboration with international organizations such as ICAO and civil aviation authorities that have implemented or are implementing SMS and SSP

SM ICG Member Organizations

- FAA AVS
- EASA
- TCCA Canada
- ANAC Brazil
- CAA of New Zealand
- CASA Australia
- JCAB Japan
- Part of EASA Team
 - AESA Spain
 - CAA of Netherlands
 - ENAC of Italy
 - DGAC of France
 - FOCA Switzerland
 - Trafi of Finland
 - UK CAA
- Observers
 - ICAO
 - CAA of UAE
 - CAA of Hong Kong

SM ICG Project Teams

- Projects identified and Project Teams established by the SM ICG Steering Committee.
- Project areas of interest include standardization, promotion and guidance.
- SM ICG products will include the development and support of:
 - A common understanding of SMS requirements, safety oversight processes, and safety measures;
 - Guidance material for regulatory authorities and industry which may include guidance and tools, safety behavior assessment tools, training material, and promotion/communication material;
 - Standard taxonomy, which may include standard hazard definition and taxonomy, common SMS and SSP terminology, and data sharing; and
 - Knowledge sharing between authorities.

SM ICG Final Products

- Pamphlet - "10 Things You Should Know About Safety Management Systems"
- Paper - "A Common Approach to Safety Performance"
- Paper - "Development of a Common Taxonomy for Hazards"
- Guide - The Senior Manager's role in Safety Management Systems
- Guide - The Frontline Manager's role in Safety Management System
- Guide - SMS Evaluation Tool
- Paper - Safety Management Terminology
- Paper - SM ICG Findings on SMS Equivalence
- Guide - Risk Based Decision Making
- Guide - A Systems Approach to Measuring Safety Performance
- Guide - Measuring Safety Performance – Guidelines for Service Providers
- Guide – Examples of Hazards in the Aviation System
- Guide – SMS Inspector Competency Guidance
- Joint papers submitted to various venues

- Available via SKYbrary - <http://bit.ly/SMICG>

Next Steps

- Continue to further develop and integrate RBDM, FAA SMS and US SSP
- Continue SMS rulemaking activities
- Continue voluntary SMS implementation activities
- Continue international collaboration via SM ICG and ICAO SMP
- Further information regarding safety management activities:
<http://www.faa.gov/about/initiatives/sms/>
- Continue industry outreach activities
