

ICAO MID

30 November 2020

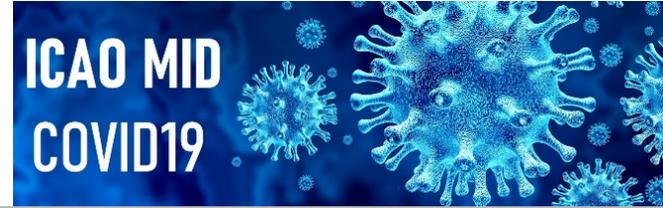

MIDAMC STG/6 Meeting

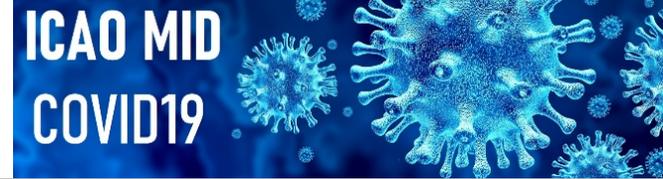

Agenda Item 4

MID IP Network

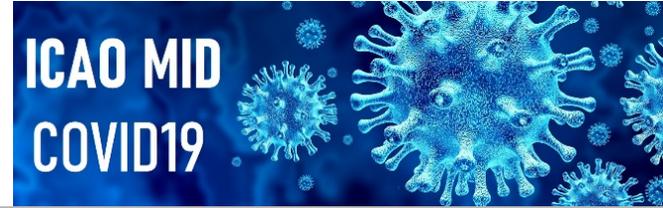

CRV Project

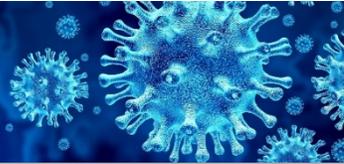

The CRV aims to help States achieve a safe, secure, reliable and economical backbone network to handle current and anticipated network traffic demand as well as enabling the new features enhancement in the APAC and MID Regions. MIDANPIRG/16 through Conclusion 16/15 invited States to engage with the recommended supplier to establish individual service contracts.

- CRV service provider (PCCW) offered a bundle discount with around 10-15% less if Six (6) States place order in the same period. However, CRV overall cost could be reduced if a high number of States join the project
- The MIDAMC STG/5 (October 2019, Amman) agreed that one to one meetings should be arranged between PCCW and interested States in 2020, to:
 - understand specific requirements and concerns
 - review the solution commercially and technically
 - discuss the System Engineering plan to CRV

The meeting is requested to discuss the current status of CRV implementation in the MID Region, and propose the way forward

Thank you for your Attention
