

## Agenda Item 3: Planning and implementation issues related to ATM/SAR Updates from MID States on ATM/SAR Implementation

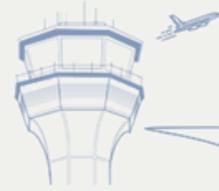

### Update on ATM/SAR developments and implementation

Presented by Saudi Arabia

# Contents

- Latest developments related to ATM/SAR.
- Identified needs and priorities.
- Challenges and difficulties.
- Lessons learnt, and capacity building activities; and
- Ongoing and Planned projects.
- Air Traffic Flow and Capacity Management: Overview on KPIs

## Latest developments related to ATM/SAR

The Aeronautical Rescue Coordination Centre (ARCC) & SAMCC facilities were enhanced by the installation of:

- Deployment of MEOSAR System with 10 Medium Earth Orbit LUTs (MEOLUTs) channels: 6 Channels in Jeddah ACC and four additional/extra channels in Riyadh ACC with local User Terminals/ work-stations to track, receive and process alerts from COSPAS-SARSAT. The MEOSAR system is considered as major enhancement of distress detection and processing capabilities in the MID region. Moreover, SAMCC will introduce return link services- messages (RLS-M) in accordance with Cospas-Sarsat requirements.
- **New Advanced Search and Rescue incident management system** which supports SAR planning and coordination, this system provides the aeronautical rescue coordination centres with a complete view of SAR data, including emergency beacon locations and information about local SAR resources and facilities (e.g. Vessels, helicopters and personnel).

ARCC/SAMCC are Staffed by 12 SAR Controllers/operators providing services and supporting distribution of distress alerts and SAR operations 24h/7 within the service area. The Staff will be trained as SAR Mission Coordinator using the **New Advanced Search and Rescue incident management system.**

ICAO MID

# ATM SG/7

The MIDANPIRG Air Traffic Management Sub-Group, Seventh Meeting

Virtual Meeting 15 – 18 November 2021

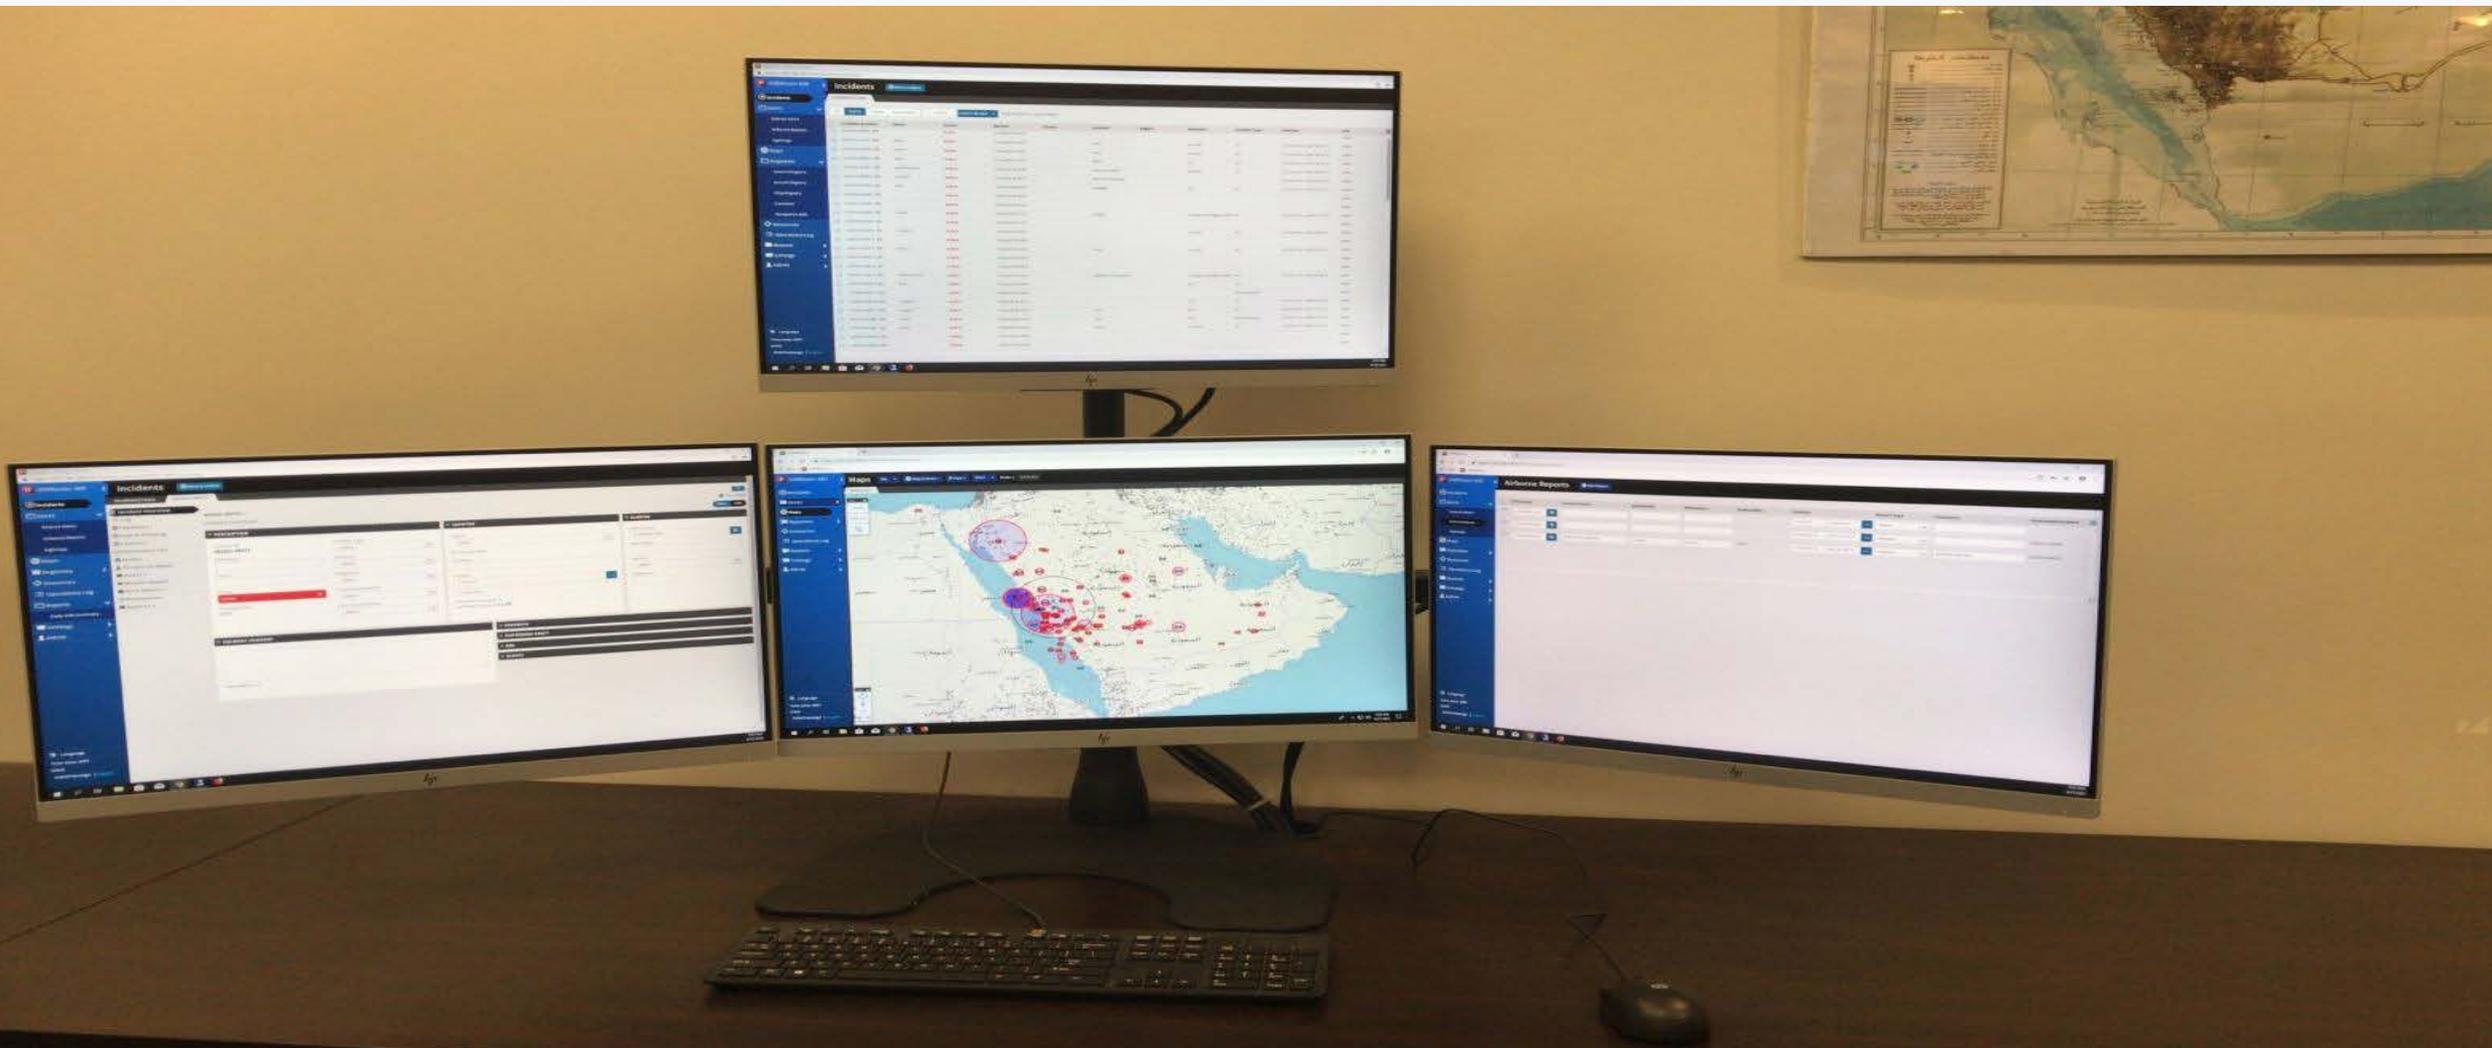

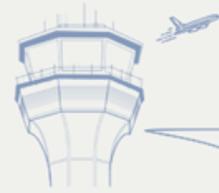

# MEOLUTs Channels at Jeddah ACC

## SAR Management System used by ARCC/SAMCC

## Latest developments related to ATM/SAR

### Deployment of New ATM System at Jeddah, Riyadh ACCs including providing of APP Services in Jeddah, Riyadh, Madinah, Gassim, and Hail)

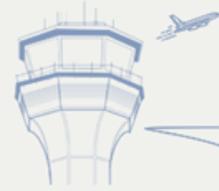

A new ATM system with enhanced capabilities for traffic management, conflict detection, and automatic handover was deployed at Jeddah and Riyadh ACCs with CWPs providing APP services for Jeddah, Riyadh, Madinah, Gassim and Hail. Jeddah and Riyadh ACCs have contingency configuration allowing each Center takeover the whole traffic in case of major failure/outage in one of the centers. A real time exercise to check the contingency configuration was conducted on 13 October 2021.

### Deployment of New ATM System at Dammam and Abha Approach Centers.

The same new ATM system was deployed at Dammam and Abha Approach Centers with the same ATC tool capabilities.

### Deployment of remote connections using the new ATM system during Q3/Q4-2021

Under the enhancement of Air Navigation Systems and Procedures (EANSPP), remote connections using the new ATM system were set at Jazan, Taif, Tabuk, Yenbu, Najran and Khamis Towers. The Situation Data Display (SDD) is mainly used for awareness purpose on traffic from/to the related airports and Electronic Flight Strips Management system is used to manage the progress of the flights (Paper strip is used as backup).

## Latest developments related to ATM/SAR

### Deployment of new MSSR Radars serving Jeddah, Riyadh, and Dammam CTAs

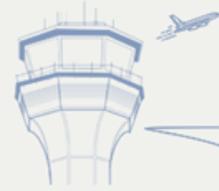

To keep the redundancy level of ATS Surveillance within Jeddah, Riyadh and Dammam CTAs/TMAs, new MSSR radars were deployed to replace old radars that were dismantled due the end of lifecycle and lack of spare parts

### Deployment of new MSSR Radar at Jazan Airport and introduction of ATC APP service

A new MSSR Radar is deployed at Jazan airport to support the introduction of approach service for this airport. The ATC approach service will be operational by the Q2-2022 and will be provided remotely from Abha Approach Center.

### Deployment of two new RCAGs and three MSSR Radars at Um Almelh and Shaibah (Empty Quarter)

Under the upgrading of ATS communications and surveillance in KSA empty quarter, two new Remote Communication Air/Ground (RCAGs) and three MSSR radars were installed. All facilities will use VSAT connections/Links between the sites and Jeddah ACC. The commissioning is expected to be by Q1-2022.

## Latest developments related to ATM/SAR

### Deployment of IT platform for airspace reservation (Trial Phase)

A new platform was deployed for airspace reservation and activation. The platform is aiming to introduce efficiency in the process of managing the airspace reservation requests and activation. It's considered as enabler for FUA.

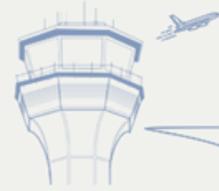

### Deployment of Integrated Electronic Flight Plan System (IFPS)

A new system for flight plan data processing and exchange allowing airspace users and operators to submit their FPLs through web-based service. The System will check automatically the validity of the data items considering the status of ATS routes, the flight profile, and active NOTAMs ..etc.

### Cooperation with SITA to enhance the ground network related to Data Link Services (DLS)

Agreement with SITA to install 17 VHF/VDL (VHF Ground Stations - VGS) Mode 2 supporting Data Link Services using selected RCAG and RTR sites. The VGS are used to provide DLS for Airlines Operational Control (AOC) and ATS.

## Latest developments related to ATM/SAR

### Installation and operation of new Voice Communication Systems (VCS) at Jeddah & Riyadh

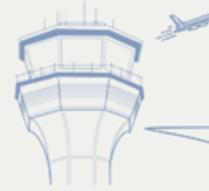

Installation and operation of new VCS at Jeddah and Riyadh ACCs with revision of IP backup system established between the two ACCs to allow switchover and takeover all ATC sectors in case of major failure or outage at one of the ACC Centers.

### Upgrade of ATC Towers Communication Systems at Hail, Gassim and Jazan.

Upgrade of communication systems (VCS, Recorder, Master Clock) with redundant IP-LAN connections and Main/Standby radios and backup portable radios.

### Upgrade of ATIS Systems

Implementation of new ATIS system to automatically extract METAR messages from the Central Database of the National Centre of Meteorology (NCM) in Saudi Arabia and display it at ATIS system located in TWRs. This system will be implemented for all ATS TWRs with local backup based on the arrangements between ATS TWRs and MET Offices.

## Latest developments related to ATM/SAR

### Introduction of 5NM radar Separation in CTAs at Jeddah, Riyadh, Madinah, Dammam & Abha

Optimization of radar separation by application of 5 NM within CTAs of Jeddah , Riyadh, Madinah, Dammam, and Abha.

### Enhancement of PBN IFPs at Jeddah.

Enhancement of PBN IFPs by introduction of Point Merge Concept to allow efficient sequencing of arrivals and increase capacity.

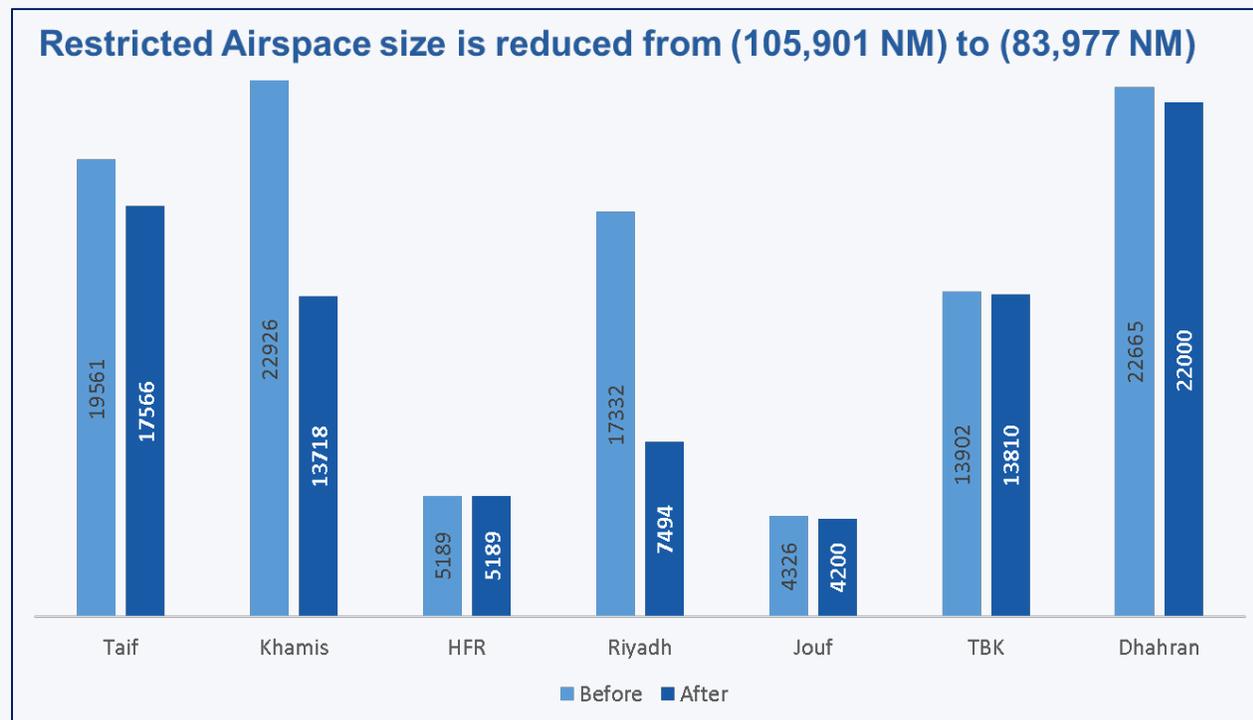

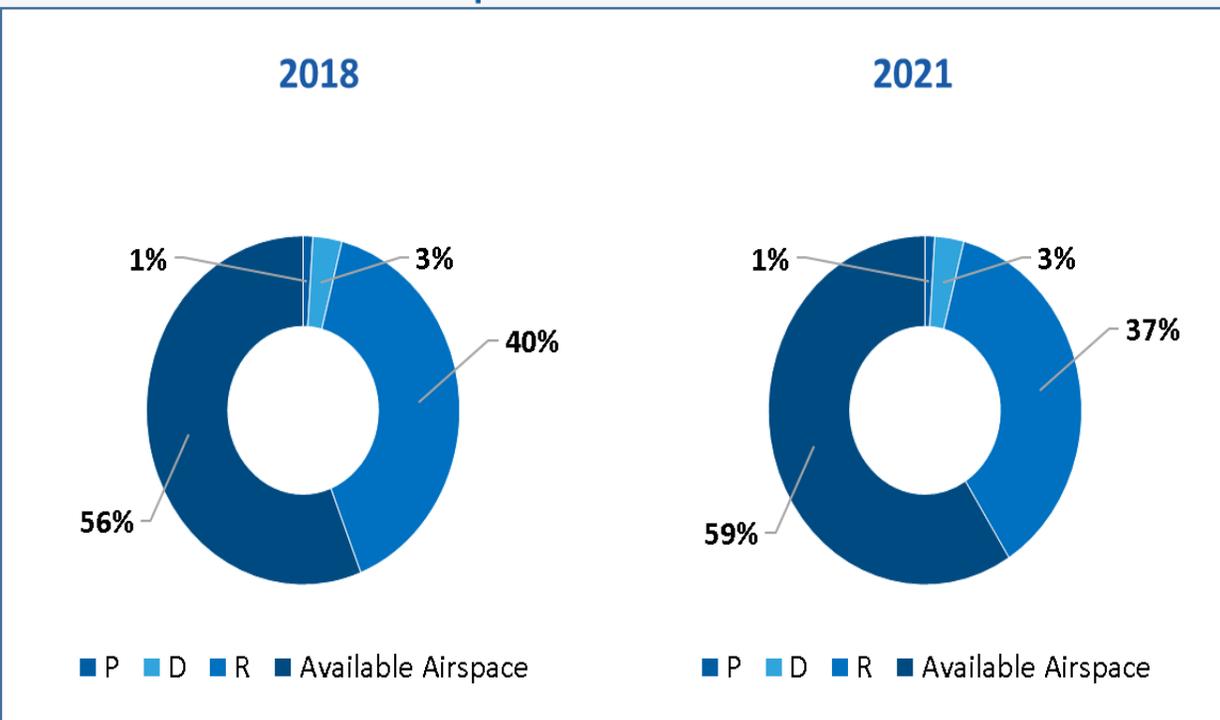

### Progressive implementation of Flexible Use of Airspace through arrangements with military

Signature of 8 LoAs and an SLA related to CNS/ATM facilities.

# Progressive implementation of Flexible Use of Airspace through arrangements with military

Recaptured 3.6%

# Identified needs and priorities

## Needs

- Specialized training targeting emerging activities and new entrants (UAS)
- Workshops on best practices and success stories related to ATM enhancements/improvements
- Involvement of ICAO MID Office to facilitate the development and signature of working arrangements.
- Regular updates and exchange of information on the upcoming development related to ATM.

## Priorities

- Widely implementation of PBN
- Signature of contingency arrangements between States
- Setting of AMHS/OLDI connections
- High skilled ATM Staff to cope with needs and upcoming developments.

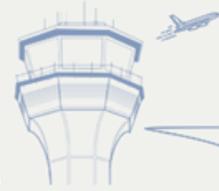

# Challenges and difficulties

## Challenges

- Meet airspace user needs including new entrants (e.g. UAS, Water ADs)
- Management of new flying activities below 1000 FT.
- Use of virtual/online technologies for the qualifications of Staff
- Introduction of new technologies and automation for aeronautical data management and exchange.
- Cyber-threats

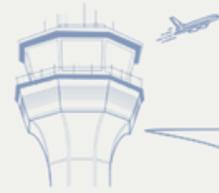

## Difficulties

- Resources required for the development of services
- Slow recovery from COVID-19 pandemic
- Replanning of CNS/ATM projects
- Integration between all services providers for automatic exchange of aeronautical data and information.

## Lessons learnt, and capacity building activities

- Success of ATM projects should focus on training, OJT and hands-on activities
- Customize and quick guide documentation will support compliance and implementation of changes
- Detailed Safety Risk Assessment will allow identification of Safety Requirements supporting efficient and effective implementation of projects.
- Introduction of e-Library and portal will ease access and sharing of the technical and operational documentation.
- Encouragements will enhance the overall performance
- Online/virtual meetings will increase the number of participants in any event and contribute to the enhancement of capabilities.
- Cooperation with universities will offer opportunities for the development of customize and local tools and applications.

# Ongoing and Planned projects

## Deployment of ATS digital remote TWRs at ALULA and for the new Red Sea airport (under construction )

Introduction of ATS digital remote TWRs to provide AFIS service at ALULA and ATC service at Red Sea airport. The Red Sea Digital Remote TWR will be based on local solution where the digital TWR is based at the airport.

## Deployment of ADS-B Ground Stations Network by the end of Q4-2022

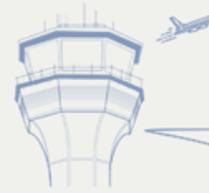

Introduction of 13 ADS-B Ground Stations network to be used as secondary layer of ATS Surveillance and to enhance the level of situational awareness for ATCOs within Non-radar Areas.

## Introduction of CPDLC Service within areas with low and medium traffic

The new ATM System is capable of processing CPDLC messages and data. The feature was validated during the deployment of the ATM system at Jeddah, Riyadh, ACCs, and Dammam, Abha APP Centers. SANS has a plan to introduce the service by the end of 2022.

## Extension of airspace “Class A” upper limit up to FL600 in Jeddah FIR

Extension of the Airspace Class A upper limit up to FL 600. This extension will affect all ATC Sectors, CTAs and ATS routes. This will increase the capacity of the airspace by adding seven (7) additional IFR flight levels (East bound:3 flight levels and westbound :4 flight levels).

## Agenda Item 3: Planning and implementation issues related to ATM/SAR MID ATFM Implementations

# Air Traffic Flow and Capacity Management

Presented by Saudi Arabia

## KPI-01 Departure punctuality

Percentage of flights departing from the gate on-time (compared to schedule time).

This is an airspace user and passenger focused KPI: departure punctuality gives an overall indication of the service quality experienced by passengers, and the ability of the airlines to operate their schedule at a given departure location.

AirPort	TOTAL FLIGHTS	TOTAL ON-TIME	KPI (%)
OERK	6121	5374	87.80%
OEJN	4805	4209	87.60%
OEDF	2159	1959	90.74%
OEMA	679	625	92.05%
<b>KSA</b>	<b>13764</b>	<b>12167</b>	<b>88.39%</b>

KSA departure punctuality assessed based on the four major international airport assessment is:

Airline	TOTAL FLIGHTS	TOTAL ON-TIME	KPI (%)
SVA	7623	6836	89.68%
KNE	2376	2128	89.56%
FAD	1600	1432	89.50%
MSR	322	274	85.09%
QTR	185	146	78.92%
GFA	159	152	95.60%
RJA	141	134	95.04%
UAE	127	105	82.68%

## KPI-02 Taxi-out additional time

Actual taxi-out time compared to an unimpeded/reference taxi-out time.

This KPI will give an efficiency indication for the ground movement operations. It includes an average of queuing/sequencing that is taking place at the departure runways, no-optimal taxi routing, intermediate aircraft stops, aerodrome layout and CO2 emission considerations.

AirPort	TOTAL FLIGHTS	TOTAL ON-TIME	KPI (%)
OERK	6124	5018	81.94%
OEJN	4801	4231	88.13%

## ATFM Dashboard and data analysis

Its crucial to have a clear and overall required data presented in a way, to ease the data analysis and identifying the focused area to improve and find solutions

In SANS, we developed a dashboard to ensure having an overview overall performance area where we can uplift operation and ensure on time performance

Data outcome shall be coordinated to concerned stakeholder internally and externally addressing the issue and propose solution if applicable

ICAO KPI LINK ["https://www4.icao.int/ganpportal/ASBU/KPI"](https://www4.icao.int/ganpportal/ASBU/KPI)
