

ICAO MID

Webinar on the provision of Terrain and Obstacle (TOD) and AIP Datasets

19 May 2022

Sorin Onitiu, ICAO MID FPP Manager

AIP Digital Dataset Provisions

Introducing the Topic

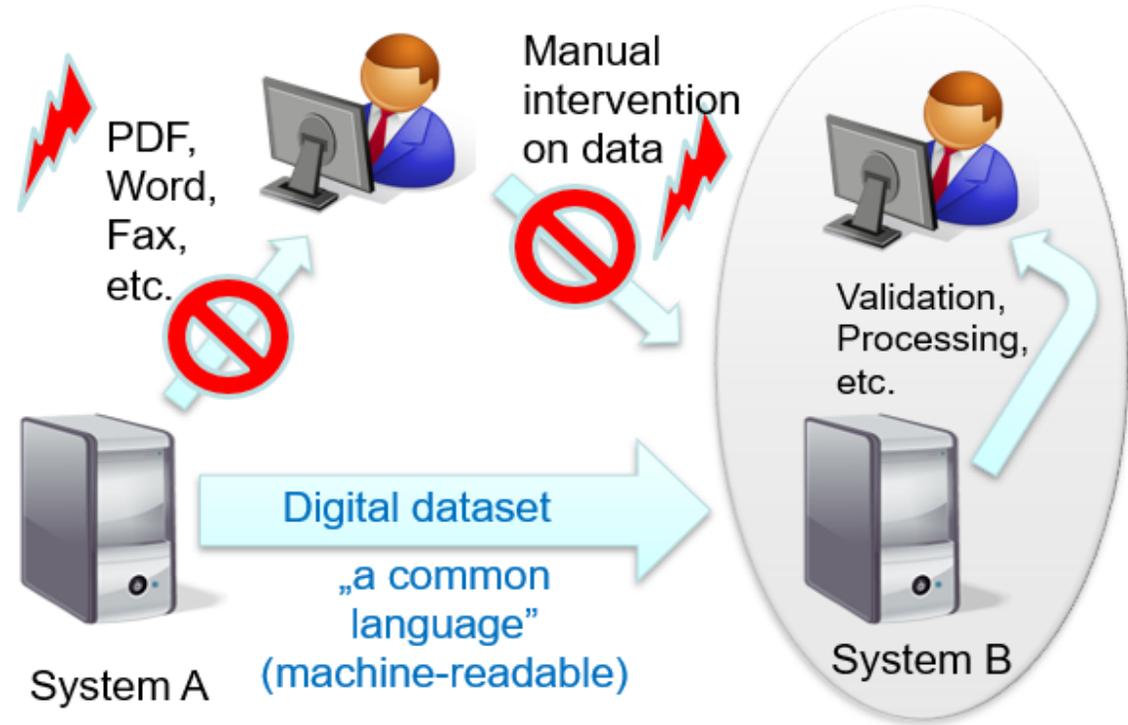

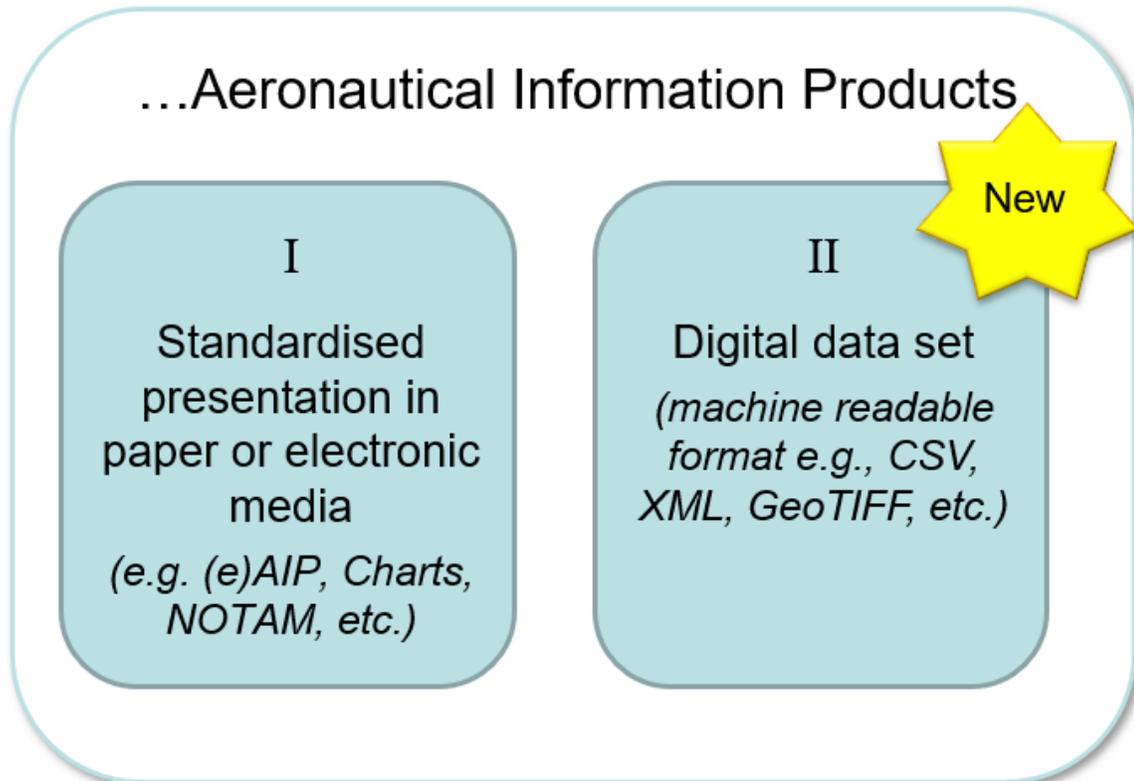

- **Placing AIM into the new Context;**
- **AIM Challenges vs. DDS;**
- **AIP Digital Datasets Implementation challenges (deep-dive);**
- **AIP Digital Datasets Consideration: What, How, When**

Placing AIM into the new Context

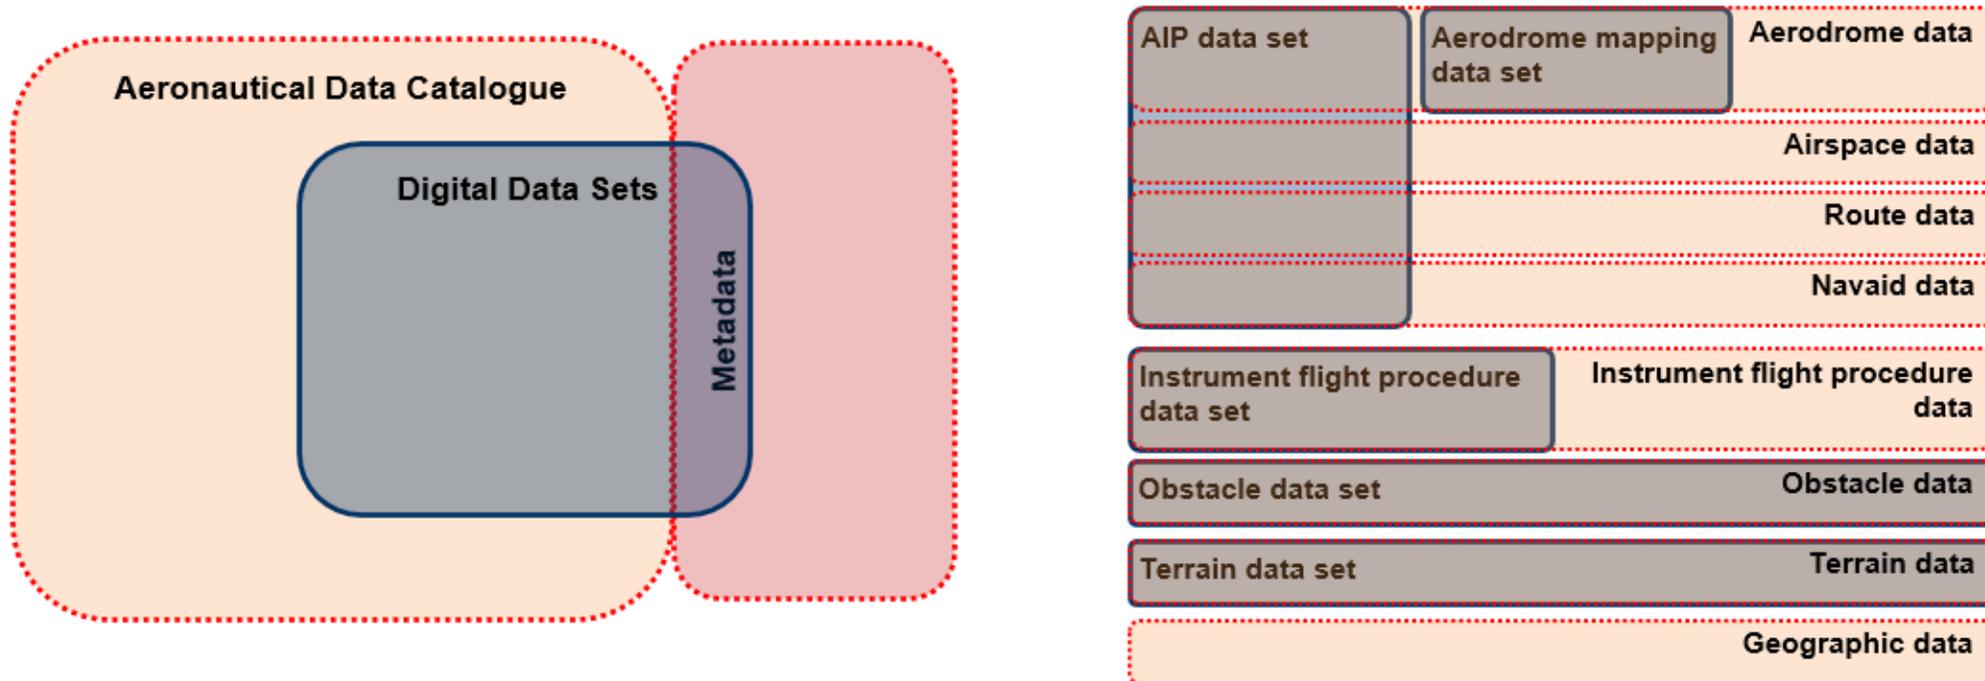

ICAO Annex 15, 16th Edition: “...aeronautical data and aeronautical information may be provided as:...”

Placing AIM into the new Context

Scope of Aeronautical Data Catalogue & Digital Data Sets

AIM Challenges vs. DDS

- **It is recognized that Digital Dataset implementation should enforce the system-to-system interoperability.**
- **The Aeronautical Information Model to be used should:**
 - ✓ Use Unified Modelling Language (UML)
 - ✓ Include data value constraints, data verification rules and provisions for metadata
 - ✓ Include a Temporality model.
- **AIXM 5.x system would enable the provisions of all data sets (exception of digital Terrain data);**
 - ✓ **However, based on data exchange experience, AIXM 5.x alone cannot ensure the system interoperability!**
- **Non-coordinated AIXM 5.x systems are harming the interoperability and implicitly DDS harmonization:**
 - ✓ No common set of BRs
 - ✓ Non-shared encoding rules between providers,
 - ✓ Different level of automation between providers (from manual to fully automated process)

AIP Dataset Implementation Challenges (deep dive)

- **Cross-border data:** FIR BDRY significant points, FIR geographical borders, common route segments (data) consistency.

Possible Solution

- Coordination (SLA) required to decide who is the authoritative source for what data;
- Geographical position e.g., FIR border alignment (AIP description) transposed into digital data;

- **User impacts:**

- Data provision in different formats (AIXM, ARINC 424, csv),
- Handling of cross-border data received from various sources e.g. authoritative source, referential integrity, etc.;
- “Mixed mode” processes e.g. significant points (ENR 4.4) digital dataset and ENR 3.x from (e)AIP, digital data sets vs. charts, etc.

Possible Solution

- Regional initiative in harmonizing data exchange formats (AIXM 5.1);
- Single source (authoritative) for digital data applied also by neighbouring State;

- **Data Set Format:**

- Data file as export vs. product (e.g. SWIM service);
- Temporality mechanism catering AIP AMDT + AIP SUPP

Possible Solution

- Quick win vs. strategic approach;
- TEMPDELTA concept extended to SUPP;

AIP Dataset Considerations: What, How, When

Decisions Matrix (sample)

Domain	National Datasets Plan			
What	Priority	Responsible	Time	Remarks
	AIP	AIS HQs	2020	<i>"Should"</i> provisions
	Obstacle Area 1	AIS HQs	Q1/2021	<i>"Shall"</i> provisions
	Terrain Area 1	AIS HQs	Q1/2021	<i>"Shall"</i> provisions
	Obstacle Area 2, 3 & 4	Airports/ANSP	Q2/2022	Area 2a/Area 4: <i>"Shall"</i> Area 2b,c & d/Area 3: <i>"Should"</i>
	Terrain Area 2, 3 & 4	Airports/ANSP	Q2/2022	Area 2a/Area 4: <i>"Shall"</i> Area 2b,c & d/Area 3: <i>"Should"</i>
	IFPD	ANSP	TBD	<i>"Should"</i> provisions
	AMDB	TBD	TBD	<i>If applicable, based on Regulator decision</i>

AIP Dataset Considerations: What, How, When

Decisions Matrix (sample)

Domain	National Datasets Plan		
How	Elements	Tech Specs/ Implementation Plan	Description
	Implementation Scenarios	Implementation Plan	<ul style="list-style-type: none"> • With AIM supplier support; • "In-house" solution, internal resources;
	Content	Tech Specs	<ul style="list-style-type: none"> • Resolve PANS-AIM inconsistencies; • Mapping PANS-AIM to AIMDB AIXM 5.1; • Tech Specs for mapping, metadata and BRs; • Content adapted to specific of State AIP; • Consistency assured between AIP dataset vs. #AIP-DS#;
	Completeness	Tech Specs	<ul style="list-style-type: none"> • Full dataset vs. sub-set/grouping; • SUPPs are encoded;
	Delivery Mechanism	Tech Specs	<ul style="list-style-type: none"> • SWIM Interface (request/reply, pub/sub, etc.) • SWIM Service (Overview, Registry, etc.) • Transition AIM 1.0 to AIM 2.0 (SWIM dissemination mechanism)

AIP Dataset Considerations: What, How, When

Decisions Matrix (sample)

Domain	National Datasets Plan		
When Transition Plan	Strategy Plan	Timeframe	Description
	Global ICAO	2019 – 2024 2025 - onwards	<ul style="list-style-type: none"> • B1-DAIM: Digital Datasets; • B2-DAIM: SWIM environment;
	ICAO EUR/NAT region	2025 – 2030 2030 - onwards	<ul style="list-style-type: none"> • Block 2: Provision of ICAO digital datasets; • Block 3: SWIM dataset distribution;
	ICAO MID region (Doc. 008)	2019 – 2024 2024 – 2028 2028 - onwards	<ul style="list-style-type: none"> • Near-term: ETOD Area 1 + 4, AMDB (if applicable); • Mid-term: AIP + IFPD • Long-term: Distribution SWIM Information Services
	State Transition Time AIC Publication GEN 3.1.6 notification	2020 - 2021 TBD	<ul style="list-style-type: none"> • AIP Dataset, etc. • Transition period for provision in parallel w/ AIP datasets; • AIP content removal in close coordination with the users; • “Co-existence time” decided upon survey/questionnaire; • Duration of the “grace period”; • State alignment to ICAO SARPs; • Brief description in GEN section – ref. PANS-AIM, Appendix 2)
