GCANS ATFM progress

MIDANPIRG AIR TRAFFIC FLOW MANAGEMENT TASK FORCE

EIGHTH MEETING (ATFM TF/8)

(VIRTUAL, 31 OCTOBER- 1 NOVEMBER2023)

PRESENTED BY : MOHANAD ALI MOHAMMED JAWAD – ATFM MANAGER

outlines

- ▶ Baghdad FIR
- ▶ GCANS ATFM CURRENT STEPS
- ▶ Calculate sector capacity (in ACC, Approach in plan).
- ▶ Establish an ATFM team and define their roles.
- ▶ Provide a basic ATFM course for self-learning.
- ▶ Implement slot coordination in Najaf during specific periods(done by Najaf OCC team).
- ▶ Perform daily, weekly, and monthly traffic analysis with traffic prediction.
- ▶ Create a draft of the GCANS NATIONAL ATFM plan.
- ▶ Send the ATFM daily plan on a daily basis.
- ▶ Conduct monthly ATFM teleconferences.
- ▶ Update Letters of Agreement (LOA) ATFM section with Tehran, shortly with Saudi Arabia.
- ▶ Design Traffic Prediction Python Tool

Baghdad FIR

- Baghdad FIR has two main ACC sectors: **North sector and South sector**.
- Baghdad FIR has three approach sectors: **Kirkuk, Baghdad, and Ali sectors**.
- Baghdad has **6 main international** airports and some military bases.

CHANGES: Baghdad ACC north secondary frequency changed.

GCANS ATFM CURRENT STEPS

- ▶ Calculate sector capacity (in ACC, Approach in plan).
- ▶ Establish an ATFM team and define their roles.
- ▶ Provide a basic ATFM course for self-learning.
- ▶ Implement slot coordination in Najaf during specific periods(done by Najaf OCC team).
- ▶ Perform daily, weekly, and monthly traffic analysis with traffic prediction.
- ▶ Create a draft of the GCANS NATIONAL ATFM plan.
- ▶ Send the ATFM daily plan on a daily basis.
- ▶ Conduct monthly ATFM teleconferences.
- ▶ Update Letters of Agreement (LOA) ATFM section with Tehran, shortly with Saudi Arabia.
- ▶ Design Traffic Prediction Python Tool

Calculate Sector Capacity

► *Dorata task equation* $c = \frac{\phi * \delta}{\mu * T\mu * v\mu}$

c	The number of aircraft that can be controlled simultaneously
φ	The ATCO availability factor.
δ	Average flight time of the aircraft in the sector
μ	number of communications for each aircraft in the sector
Tμ	mean duration of each message
vμ	mean speed of aircraft within the sector

Establish an ATFM team and define their roles

- ▶ Establishing an ATFM team is essential. This team is responsible for coordinating and managing air traffic flow, collaborating with relevant stakeholders, and ensuring that the ATFM procedures are followed. Roles may include ATFM coordinators, traffic analysts, and communication specialists
- ▶ Delegation of ATFM measures to supervisors for effective implementation and oversight.
- ▶ Regularly communicate the pre-established times and measures to all Air Traffic Control Officers (ATCOs) internally to ensure a coordinated approach to managing air traffic flow.

Provide a basic ATFM course for self-learning.

- ▶ Offering a basic ATFM course for relevant personnel is essential to ensure that they understand the principles and procedures of air traffic flow management. This may involve self-learning materials or formal training sessions.
- ▶ Participating in workshops and training related to Air Traffic Flow Management (ATFM) is a valuable way to stay updated on best practices and industry advancements, workshop in Doha in February 2023. This workshop likely covered the latest developments in ATFM, best practices, and provided an opportunity for networking and knowledge sharing.

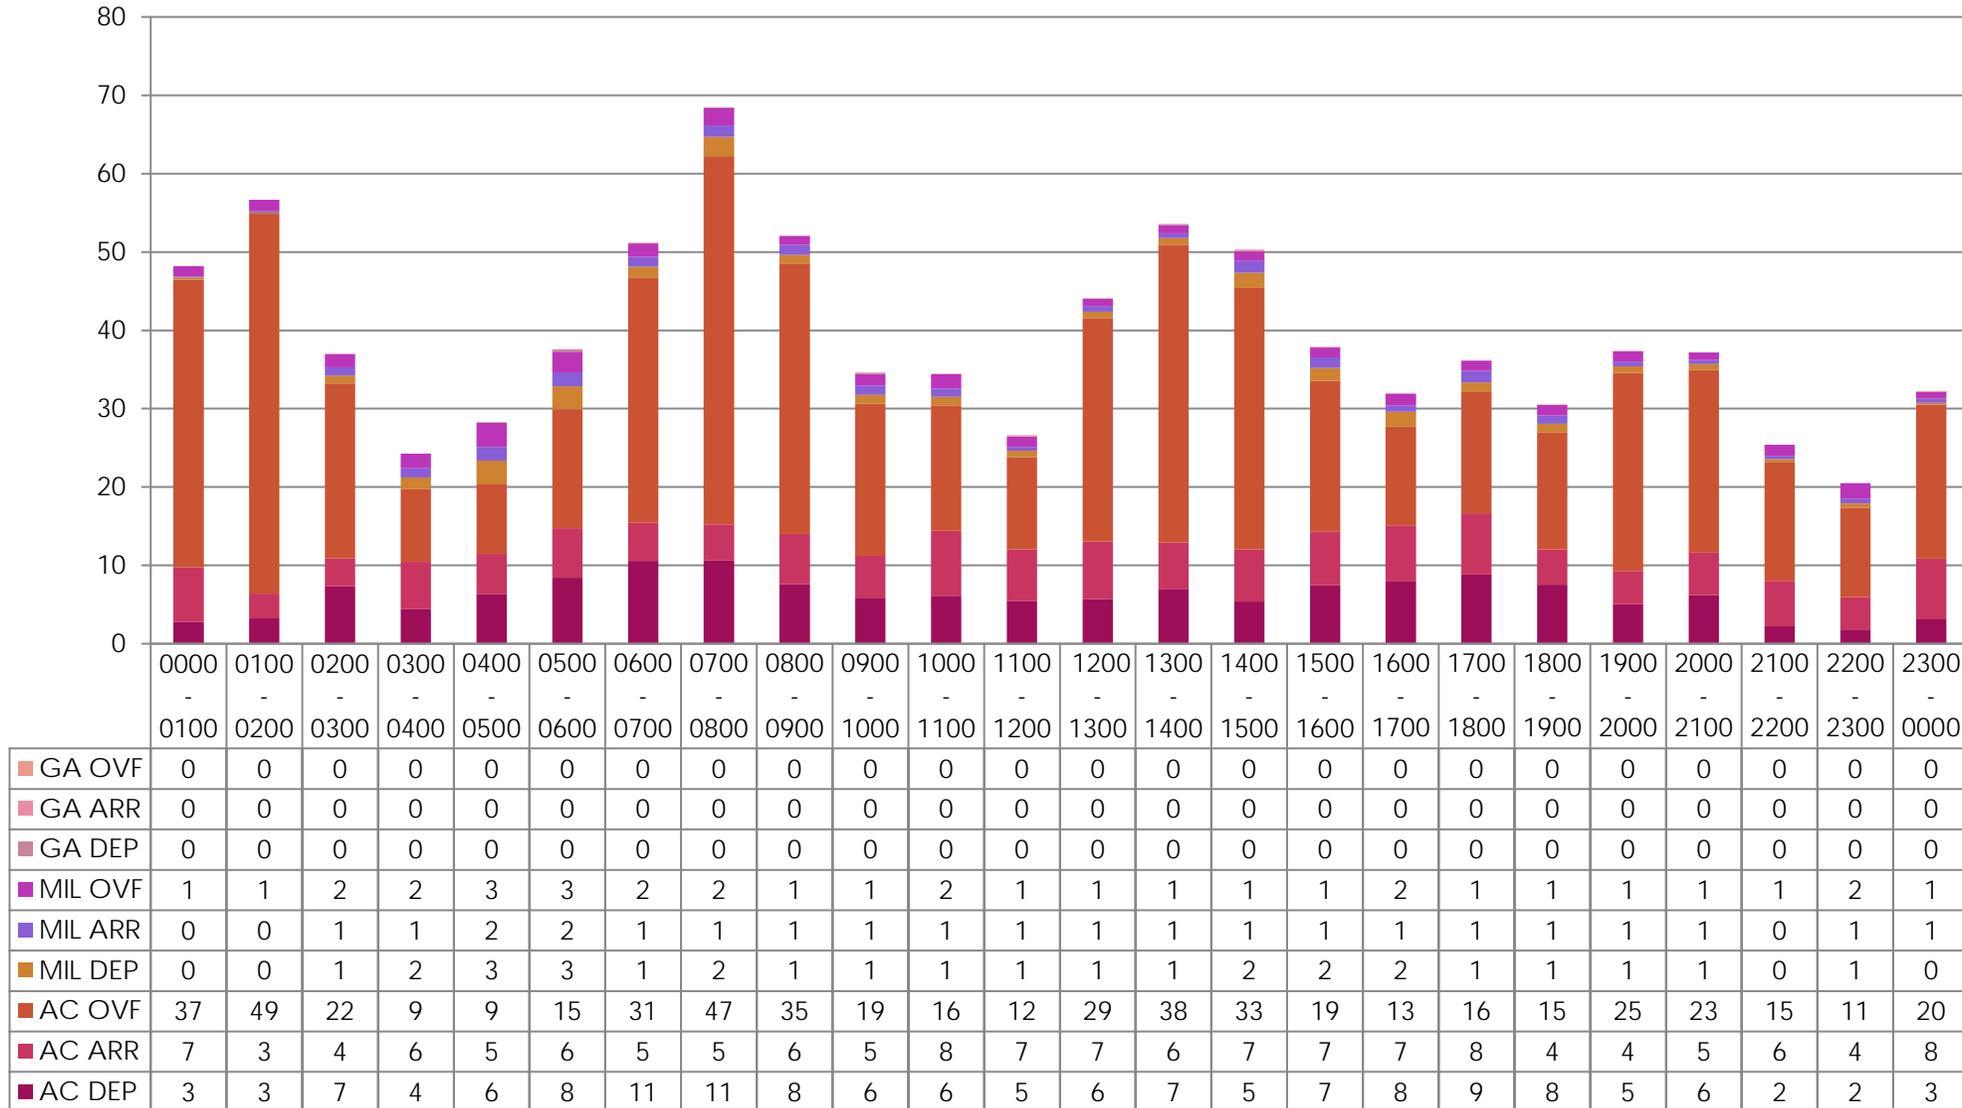

Implement slot coordination in Najaf during specific periods(done by Najaf OCC team).

- ▶ Implementing slot coordination in Najaf during specific periods is crucial for managing peak traffic periods effectively. The Najaf OCC team would play a pivotal role in this, ensuring that aircraft are allocated slots for arrivals and departures to avoid congestion.

Perform traffic analysis with traffic prediction.

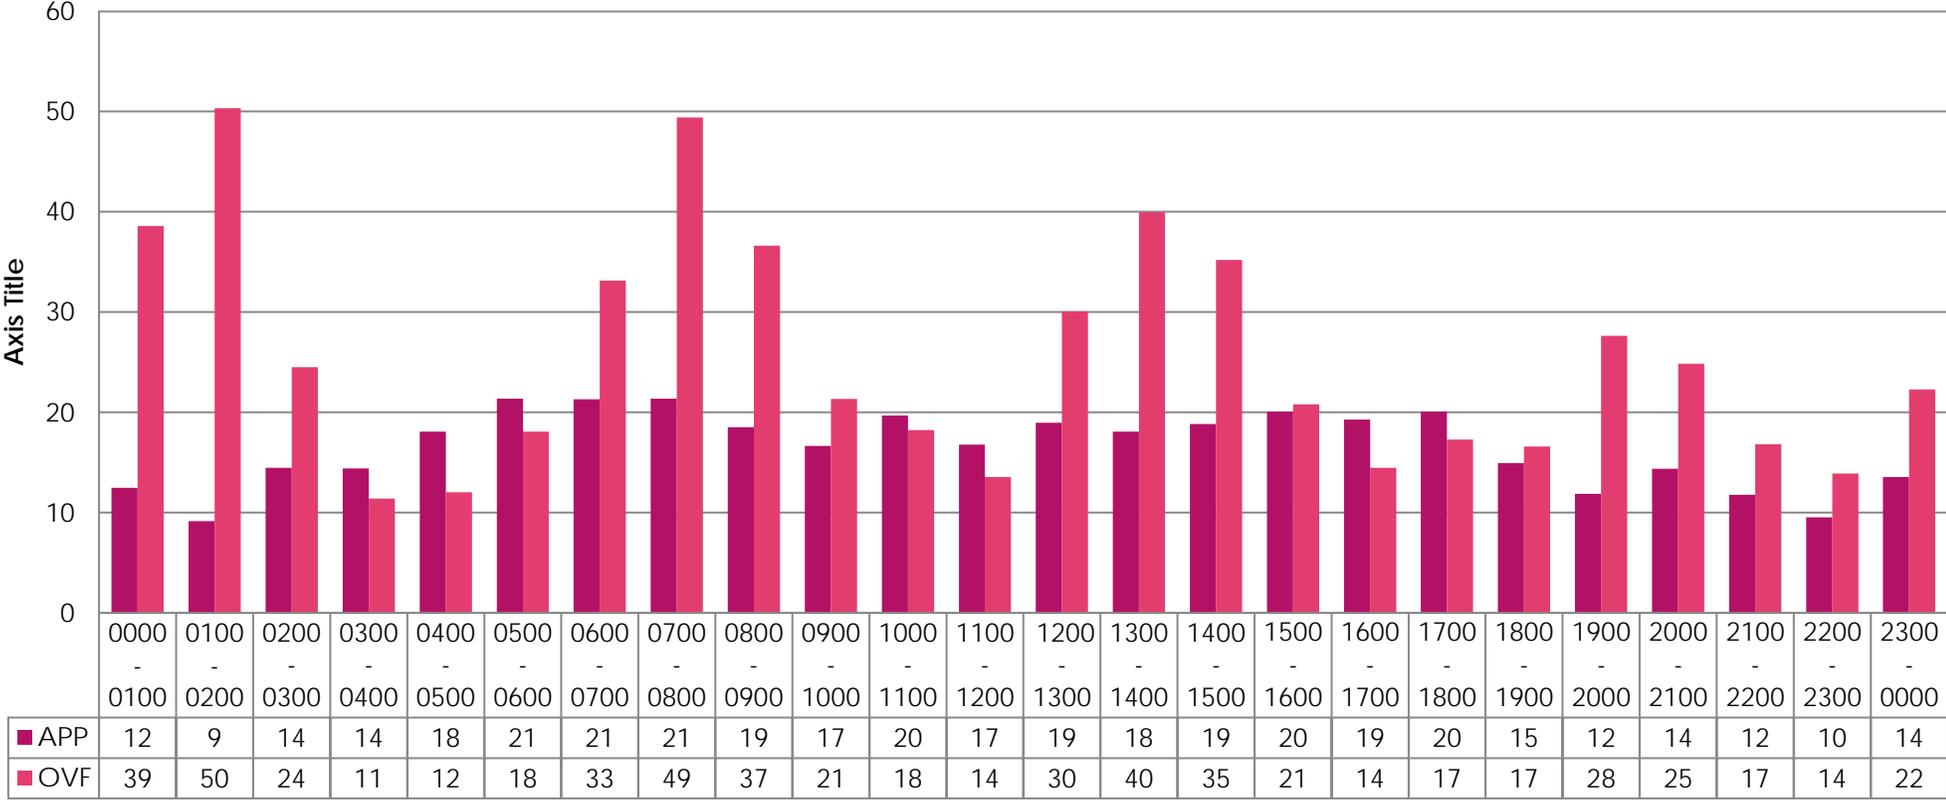

- ▶ Regular traffic analysis on a daily, weekly, and monthly basis is essential for monitoring traffic patterns, identifying trends, and making informed decisions. This analysis helps in capacity planning and resource allocation.

BACC Average Type of Flight per Weekday

Civil Mil GA

**GCANS Air Traffic Flow Management
Unit ATFM DAILY PLAN
Date: Oct 31st, 2023**

Airspace:

ORBB

- FROM 03 OCT 23 19:30 TO 02 DEC 23 23:59
GPS JAMMING OR SPOOFING INTERFERENCE WITHIN THE NORTHREN PART OF IRAQ OPERATORS SHOULD INFORM ATC IMMEDIATELY AND EXPECT RADAR VECTORING.
- FROM 05 AUG 23 00:00 TO 04 NOV 23 23:59
FLIGHTS WITH THE FOLLOWING DESTINATIONS CAN FLIGHT PLAN AS FOLLOWS:
- **TO ORER: TASMI UL602 GADSI UM860 NAMDI DCT RER**
- **TO ORSU: TASMI UL602 GADSI UM860 NAMDI DCT SUL**
REF AIP PAGE ENR 1.10-3, PARA. 4.6.4 AND 4.6.5.
- FROM 05 AUG 23 00:00 TO 04 NOV 23 23:59
CIVILIAN AIRLINES HEADING **SOUTHBOUND** CAN FLIGHT PLAN, AS FOLLOWS:
RATVO UM688 KEDIM DCT SISIN UM688 SIDAD
CIVILIAN AIRLINES HEADING **NORTHBOUND** CAN FLIGHT PLAN, AS FOLLOWS:
- **TASMI UL602 GADSI UM860 SEPTU DCT VUSEB UM860 NINVA**
- **TASMI UL602 ALPET L718 DEBNI DCT SEVKU L718 KABAN**
ALL FLIGHTS MUST BE AT FL280 OR ABOVE AT OR BEFORE DEBNI TO REMAIN CLEAR OF PROHIBITED AREA OR/P 401 AS PUBLISHED IN AIP.
LOWER AND UPPER LIMITS: FL280 – UNL.
- FROM 01 OCT 23 07:00 TO 01 NOV 23 07:00EST
CHECKLIST
CHECKLIST YEAR=2023 0584 0585 0638 0639 0640 0641 0678 0680 0687 0694 0710
LATEST AIP AMENDMENTS:
AIRAC AIP AMDT 04/23 EFFECTIVE 10 AUG 2023
AIP AMDT 03/22 EFFECTIVE 27 DEC 2022
LATEST AIP SUPPLEMENTS: NIL
AIC IN FORCE:

► **Send ATFM Daily Plan:** Distributing the ATFM daily plan to relevant stakeholders, including airlines and air traffic controllers, is crucial. This plan provides information on expected traffic flows, slots, and any restrictions or adjustments for the day.

► **ATFM Teleconference:**

Holding regular ATFM teleconferences on a monthly basis is a way to ensure effective communication and coordination among stakeholders. These meetings allow for the discussion of challenges, updates, and the sharing of important information.

Update LOA ATFM Section

- ▶ Liaising and updating Letters of Agreement (LOA) related to ATFM procedures and coordination with neighboring FIRs, such as Tehran FIR, Saudi Arabia (in progress) , is essential. This ensures that ATFM operations are harmonized across adjacent airspace.

GCANS NATIONAL ATFM plan (Draft).

- ▶ Creating a draft of the National Air Traffic Flow Management (ATFM) plan is necessary. This plan outlines the strategy and procedures for managing air traffic flow within the Baghdad FIR, including coordination with adjacent FIRs and regional authorities

Traffic Prediction Python Tool

- ▶ The Traffic Prediction Python Tool is a data-driven solution designed to forecast aviation traffic for specific hours, identify potential traffic peaks, and take into account various factors that influence air traffic. It integrates data from multiple sources, including historical aviation data, weather information, and event schedules, to make accurate predictions.

Traffic Prediction Python Tool (cont.)

Key Components:

- ▶ **Data Collection:** The system collects data from various sources, including civilian and military aviation records (arrival, departure, and overflight), weather data, and information about significant events that can impact aviation traffic.
- ▶ **Data Integration:** All collected data is centralized and cleaned, ensuring it is in a format suitable for analysis.
- ▶ **Data Analysis:** The system applies data analysis techniques to uncover patterns and relationships between aviation traffic and factors like weather conditions, events, and time of day

Traffic Prediction Python Tool (cont.)

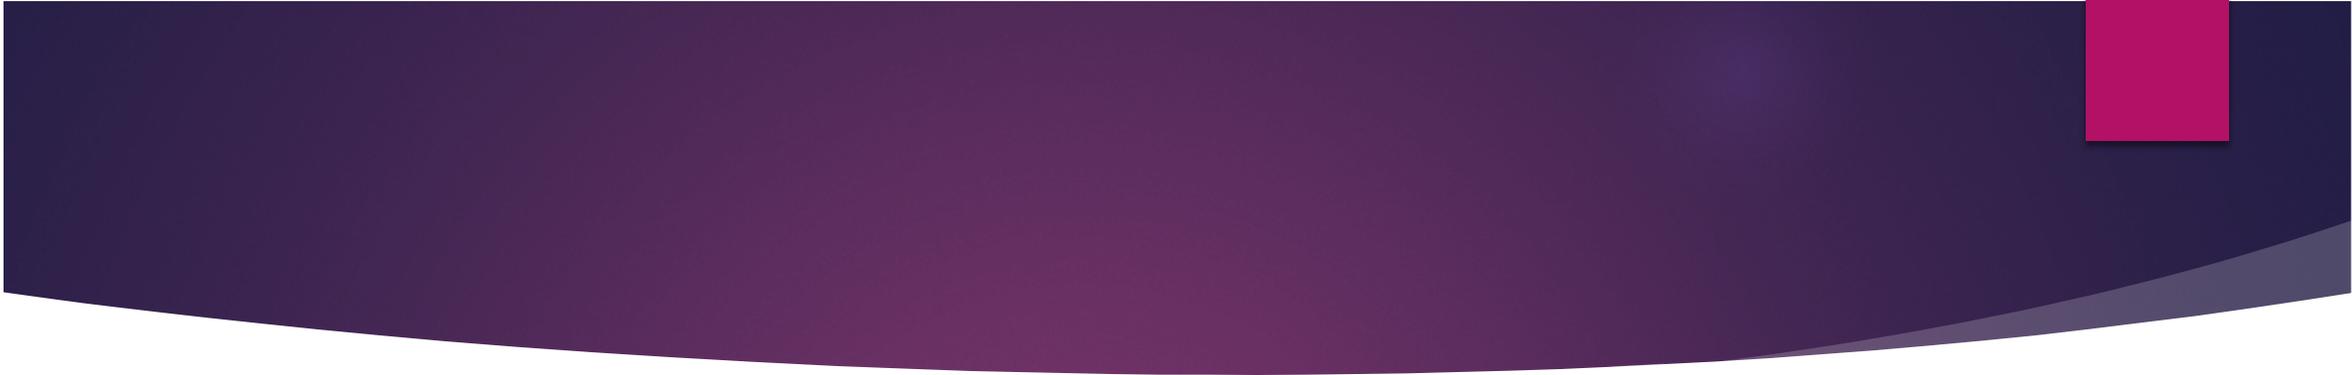

- ▶ **Feature Engineering:** Relevant features are created to help the system understand and predict how events and weather conditions affect traffic. This involves categorizing events by their impact and creating seasonal and time-of-day features.
- ▶ **Machine Learning Models:** The system uses machine learning models to predict aviation traffic. These models are trained on historical data and take into account all the features created during the feature engineering stage.
- ▶ **Peak Identification:** Using the trained models, the system identifies peaks in aviation traffic. Peaks are determined based on deviations from the average traffic and the influence of various events and conditions.

Traffic Prediction Python Tool (cont.)

- ▶ **Real-time Updates:** To improve the accuracy of predictions, the system is updated with real-time data, especially for weather conditions and live event information.
- ▶ **Monitoring and Evaluation:** The system's performance is continually monitored and evaluated to enhance its accuracy over time. Feedback from aviation authorities and users is used to make necessary adjustments.
- ▶ **Scaling and Customization:** The system is designed to be scalable, covering multiple regions and airports. It can also be customized to meet specific requirements and accommodate various events.
- ▶ **Compliance and Security:** The system ensures compliance with aviation regulations and data security standards, especially when handling military aviation data.

Future upgrades

- ▶ **Alerting System:** An alerting system is integrated to notify relevant authorities when significant traffic peaks are predicted, particularly during major events or adverse weather conditions.
- ▶ **Visualization:** The system provides a user-friendly dashboard that displays predicted aviation traffic, highlighting peaks and the factors contributing to them. It also includes a calendar view that integrates major events and weather conditions.

Thank you for your
attention, Any
questions?
