International Civil Aviation Organization

#### MIDANPIRG RANP/NANP Task Force

Second Meeting (RANPNANP TF/2) (Cairo, Egypt, 17 – 19 February 2025)

#### Agenda Item 5: Review and update MID Air Navigation Plan Volume III

#### REVIEW AND UPDATE OF THE MID AIR NAVIGATION PLAN VOLUME III

(Presented by the Secretariat)

#### **SUMMARY**

This paper presents the MID Air Navigation Plan Volume III for review and further improvement, as deemed necessary.

Action by the meeting is at paragraph 3.

#### REFERENCES

- GANP 7th edition;
- MIDANPIRG/21 (Abu Dhabi, UAE, 4 8 March 2024);
- AIMDP TF/1 (2202-21 January 2025, Amman, Jordan);
- ATM SG/10 (20-23 October 2024, Jeddah, Saudi Arabia);
- CNS SG/13 (20-23 October 2024, Jeddah, Saudi Arabia);
- PBN SG/9 (9-11 December 2024, Doha, Qatar);

#### 1. Introduction

- 1.1 The ICAO Council approved the new eANP Template (Volumes I, II and III) and corresponding procedure for amendment on 18 June 2014 (202nd session, fourth meeting).
- 1.3 The Assembly, through Resolution A41-6, endorsed the 2023-2025 edition of the Global Air Navigation Plan (GANP) as the global strategic direction for safety and the evolution of the air navigation system.
- 1.4 Furthermore, the Assembly 41 resolved that these global plans shall provide the frameworks in which regional, sub-regional and national plans will be developed and implemented, thus ensuring consistency, harmonization and coordination of efforts aimed at improving international civil aviation safety, capacity and efficiency.
- 1.5 The meeting may wish to note that Volume III contains dynamic/flexible plan elements providing implementation planning guidance for air navigation systems and their modernization taking into consideration emerging programmes such as the ASBUs and associated technology roadmaps described in the GANP. The ANP Volume III also includes appropriate additional guidance, particularly with regard to implementation, to complement the material contained in the ANP Volumes I and II. The amendment of Volume III does not require approval by the Council (approval of Part II is under the responsibility of the relevant PIRG).

#### 2. DISCUSSION

- 2.1 As per the MIDANPIRG/21 mandate (para. 5.2.19, refers), the ICAO MID Office issued State Letter AN 1/7 24/185 dated 15 December 2024 to collect the following information and updates from MID States:
  - a) update on the status of implementation of the priority 1 ASBU Threads/Elements;
  - b) progress achieved in the implementation of the Performance Based Approach and development of State National Air Navigation Plan (NANP), by completing the Questionnaire; and
  - c) State's major achievement(s)/success story(ies) in the air navigation field in 2024.
- 2.2 Regarding the implementation status of the Performance Based Approach (PBA) within the MID Region, **Appendix A** presents the activities undertaken by ICAO MID and the progress made by States in developing their National Air Navigation Plans (NANP).
- 2.3 The meeting may wish to note that the following update and proposals have been received from States and MIDANPIRG Sub-Groups to revise MID ANP Volume III as presented at **Appendix B**:
  - a) AIMDP TF/1 proposed to revise the following tables:
    - I. TABLE ASBU-MID-DAIM 3-1: Automated Data-Centric Environment;
    - II. TABLE ASBU-MID- DAIM-3-2: Aeronautical Data Quality;
    - III. TABLE ASBU-MID DAIM-3-3: Provision of Digital Data Sets
  - b) **ATM SG/10** based on ICAO GANP 7<sup>th</sup> edition requested to include KPI 04 to the list of MID Region KPIs in *MID ANP Volume III Table 3* for regional monitoring purposes;
  - c) **MID States:** the list of Performance Objectives and associated Operational Improvements (projects) proposed by States for inclusion in the MID ANP Volume III at **Appendix B**.

#### 3. ACTION BY THE MEETING

- 3.1 The meeting is invited to:
  - a) note and discuss the content of this working paper;
  - b) note the ICAO MID activities and the progress made by States in developing their National Air Navigation Plans (NANP) at **Appendix A**;
  - c) review the content of proposal for the next version of MID Air Navigation Plan Volume III at **Appendix B** and agree on the following Draft Conclusion:

#### DRAFT CONCLUSION 2/1: REVISED MID AIR NAVIGATION PLAN VOLUME III

That, the Revised MID Air Navigation Plan Volume III (Edition February 2025) is endorsed and be published by the ICAO MID Office.

\_\_\_\_\_

#### STATES STATUS REGARDING IMPLEMENTATION OF PBA & DEVELOPMENT OF NANP

According to State Letter AN 1/7 - 24/185, dated 15 December 2024, and as detailed in Attachment B, the current status of MID States regarding the implementation of the PBA concept and the development of the NANP is as follows:

| State        | PBA<br>implemented | Details related<br>to the 6 steps<br>approach<br>provided | Example of performance<br>initiatives shared with ICAO<br>MID for inclusion in ANP<br>Volume III | NANP developed | Remarks                                      |

MID AIR NAVIGATION PLAN VOLUME III

#### TABLE OF CONTENTS

#### PART 0 — Introduction

PART I — General Planning Aspects (GEN)

#### PART II - Performance Management Planning (PMP) and ANS Implementation

- 1. Step 1: Define scope, context and set ambitions/expectations
- Step 1: Befine scope, context and set amounts expectations
   Step 2: Know your system identify opportunities, issues and set objectives
   Step 3: Quantify objectives and set targets
- 4. Step 4: Select solutions
- 5. Step 5: Implement solutions
- 6. Step 6: Assess achievements
- 7. MID Region Air Navigation Systems Performance Based Framework

#### APPENDICES

#### MID ANP, VOLUME III

#### PART 0 - INTRODUCTION

#### 1. INTRODUCTION

- 1.1 The background to the publication of ANPs in three volumes is explained in the Introduction of Volume I. The procedure for amendment of Volume III is also described in Volume I. Volume III contains dynamic/flexible plan elements related to the application of a performance-based approach for a cost-effective and benefit-driven modernization of the air navigation system in line with the Global Air Navigation Plan (GANP).
- 1.2 Collaborative decision-making is key for a cost-effective modernization of the air navigation system and ensures that all concerned aviation stakeholders are involved and given the opportunity to influence decisions in order to reach defined performance objectives. Volume III guides the aviation community in the application of performance management process and identification of relevant and timely operational improvements to a given region's air navigation system including some within the Aviation System Block Upgrade (ASBU) framework.
- 1.3 The information contained in Volume III is, therefore, related to:
  - <u>Planning</u>: objectives, priorities, targets and needs planned at regional or sub-regional levels;
  - Monitoring and reporting: performance and implementation monitoring of the agreed targets.
     This information should be used as the basis for reporting purposes (i.e.: global and regional air navigation reports and performance dashboards); and/or
  - <u>Guidance</u>: providing regional guidance material for the implementation of specific system/procedures in a harmonized manner.
- 1.4 MIDANPIRG is responsible for managing and updating Volume III on a regular basis.
- 1.5 Whereas ICAO addresses the planning strategy at the global and regional levels, planning at the national level is the responsibility of States. A national planning framework should be developed by each State based on its needs and in collaboration with regional and global partners. This will ensure to the greatest extent possible that solutions are internationally harmonized and integrated.
- 1.6 National air navigation plans, as well as other national plans dealing with other aspects of aviation such as safety, security and facilitation, should all be linked together in a broader national aviation plan to ensure an integrated strategic approach at the State level. This broader plan can be considered as a civil aviation "master plan" addressing all aspects of air transport at the State level. The objective is to provide a clear and comprehensive planning and implementation strategy for the future development of the entire civil aviation sector in terms of policies, legislation, objectives, facilities, equipment, organization and capacity-building.
- 1.7 The master plan should also emphasize the importance of air transport for the economic development of the State. As such, the master plan should be linked to the State's overarching national development plan, where applicable, in order to mobilize public and private resources and partnerships for the implementation of the plan and to strengthen the civil aviation sector.
- 1.8 A clearly defined relationship between national air navigation plans aligned with the global and regional plans (GANP and RANP), civil aviation master plans and States' national development plans will enable the prioritization and optimum allocation of resources for all planned projects within States and across all sectors of activity.

#### MID ANP, VOLUME III PART I - GENERAL PLANNING ASPECTS (GEN)

#### PLANNING METHOD 1.

- Planning for the modernization of the air navigation system must begin with a thorough understanding of user system requirements and take into account traffic density and complexity, and the level of sophistication required for the provision of necessary services, among other elements.
- The Thirteenth Air Navigation Conference recommended that ICAO encourage the planning and implementation regional groups (PIRGs) to embrace a performance-based approach (PBA) for implementation and adopt the six-step performance management process, as described in the Manual on Global Performance of the Air Navigation System (Doc 9883), by reflecting the process in Volume III of all regional air navigation plans. Recommendation 4.3/1 — Improving the performance of the air navigation system, refers.
- A PBA is results-oriented, helping decision makers set priorities and determine appropriate trade-offs that support optimum resource allocation while maintaining an acceptable level of safety performance and promoting transparency and accountability among stakeholders.
- A PBA is a decision-making method based on three principles: strong focus on desired/required results; informed decision-making driven by those desired/required results; and reliance on facts and data for decision-making. The PBA is a way of organizing the performance management process.
- Although there are several ways to apply a PBA, ICAO advocates for a globally harmonized performance management process based on six well-defined steps. The goal of this cyclic six-step method is to identify optimum solutions based on operational requirements and performance needs so that the expectations of the aviation community can be met by enhancing the performance of the air navigation system and optimizing allocation and use of the available resources.

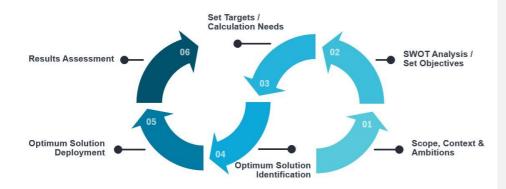

Figure 1 Six-step performance management process

Steps 1 and 2 serve to know the air navigation system, its strengths, weakness, opportunities and threats as well as how it is performing in order to set objectives. The catalogue of performance objectives that is part of the GANP global performance framework facilitates the definition of objectives.

1.7 Based on these objectives, targets can be set in step 3. An analysis of this data leads to the identification of potential solutions, in step 4, to achieve the targets by addressing the weaknesses and threats of the system. Once a set of potential solutions have been identified, a cost-benefits analysis, environmental impact assessment, safety assessment and human factor assessment should be performed to identify the optimum solution. In the GANP performance framework, a list of KPIs, linked to the relevant objectives in the performance objectives catalogue, is provided to set targets though the quantification of objectives (See list below).

| KPI 01<br>KPI 02           | Departure punctuality Taxi-out additional time                                     | KPI 13<br>KPI 14 | Taxi-in additional time Arrival punctuality  |
|----------------------------|--|------------------|--|
| KPI 03                     | ATFM Slot adherence Filed flight plan en-route extension Actual en-route extension | KPI 15           | Flight time variability  |
| KPI 04                     |  | KPI 16           | Additional fuel burn   |
| KPI 05                     |  | KPI 17           | Level-off during climb   |
| KPI 06                     | En-route airspace capacity En-route ATFM delay                                     | KPI 18           | Level capping during cruise  |
| KPI 07                     |  | KPI 19           | Level-off during descent   |
| KPI 08                     | Additional time in terminal airspace Airport peak capacity                         | KPI 20           | Number of Aircraft Accidents   |
| KPI 09                     |  | KPI 21           | Number of RWY Incursions   |
| KPI 10<br>KPI 11<br>KPI 12 | Airport peak throughput Airport throughput efficiency Airport/Terminal ATFM delay  | KPI 22<br>KPI 23 | Number of RWY Excursions<br>Number of Airprox/TCAS<br>Alert/Loss of separation/Near mid<br>Air Collisions/Mid Air Collisions |

- 1.8 Step 5 manages a coordinated deployment of the agreed solution by all stakeholders based on the previous steps. Regional plans might need to be developed for the deployment of solutions by drawing on supporting technology requirements.
- 1.9 Finally, step 6 consists of monitoring and reporting the performance of the system after the full deployment of the solution.
- 1.10 This is an iterative planning process, which may require repeating several steps until a final plan with specific targets is in place. This planning method requires full involvement of regulators (CAAs), service providers, airspace users and other stakeholders, thus ensuring commitment by all for implementation.

#### 2. Review and evaluation of air navigation planning and reporting and monitoring results

- 2.1 The progress and effectiveness against the priorities set out in the National and Regional Air Navigation Plan should be annually reported to ICAO using a consistent reporting format.
- 2.2 Performance monitoring requires a measurement strategy. Data collection, processing, storage and reporting activities supporting the identified regional/national/local performance metrics are fundamental to the success of performance-based approaches.
- 2.3 The air navigation planning and implementation performance framework prescribes reporting, monitoring, analysis and review activities being conducted on a cyclical, annual basis.
- 2.4 Reporting and monitoring results will be used to develop the MID Annual Air Navigation Reports. They will be analyzed by MIDANPIRG to steer the air navigation improvements, recommend corrective actions and review the agreed objectives, priorities and targets, if needed. The results will also be used by ICAO to develop the annual Global Air Navigation Report. The Report results will provide an opportunity for the international civil aviation community to compare progress across different ICAO Regions in the establishment of air navigation infrastructure and performance-based procedures.
- 2.5 The Report will also provide the ICAO Council with detailed annual results on the quality of service provided worldwide as well as the performance areas, which require more attention. This will serve as input for the triennial policy adjustments to the GANP and its priorities.

#### MID ANP, VOLUME III

#### PART II – PERFORMANCE MANAGEMENT PLANNING (PMP) AND ANS IMPLEMENTATION

#### STEP 1: DEFINE SCOPE, CONTEXT AND SET AMBITIONS/EXPECTATIONS 1.

- 1.1 The purpose of Step 1 is to reach a common agreement on the scope and (assumed) context of the "system" on which the performance management process will be applied, as well as a common view on the general nature of the expected performance improvements. An important part of the PBA is the development of cause-effect relationships between these technical performance characteristics and the selected higher level KPAs from the eleven key performance areas (KPAs) as identified in the Global Air Traffic Management Operational Concept (Doc 9854).
- Scope definition is important to avoid misunderstandings, in particular about the performance (improvement) which can be expected within the given scope. By defining the scope of the performance management activity, the limits of responsibility and accountability are also defined. Geographically, the scope could be an Aerodrome, FIR, TMA, CTA, etc., but the scope definition could include additional details such as type of traffic (international, overflight, IFR, VFR), etc.
- 1.3 Within a given scope, the purpose of identifying general ambitions and expectations is to develop a strategic view on the (performance) results that are expected.
- 1.4 States are requested to define the scope and context of the required performance improvements to the national air navigation system as well as the nature of the expected performance improvements.
- The expectations of the global aviation community are defined in 11 Key Performance Areas 1.5 (KPAs). The GANP considers all these areas through the performance ambitions. Although all these areas are equally important, as they are interrelated and cannot be considered in isolation, some areas are more visible to society than others.

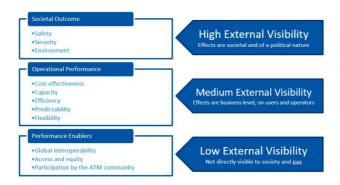

Figure 2 The 11 KPAs of the GANP

| SUMM                                  | SUMMARY OF THE GANP PERFORMANCE AMBITIONS "A high performing system by 2040 and beyond"   |  |  |  |  |  |  |
|---------------------------------------|---|--|--|--|--|--|--|
| KPA                                   | Ambition  |  |  |  |  |  |  |
| ACCESS AND EQUITY                     | No aviation community member excluded or treated unfairly.  |  |  |  |  |  |  |
|                                       | Nominal capacity easily scalable with demand.   |  |  |  |  |  |  |
| CAPACITY                              | Disruptive events do not interrupt service provision and do not significantly affect the performance of the system.                       |  |  |  |  |  |  |
| COST-EFFECTIVENESS                    | No increase of total direct ANS cost while maintaining the safety and quality of service.   |  |  |  |  |  |  |
|                                       | Significant increase of ANS productivity, irrespective of demand.   |  |  |  |  |  |  |
| EFFICIENCY                            | Reduction of the gap between the flight efficiency achieved and the desired optimum trajectory of airspace users.                         |  |  |  |  |  |  |
| ENVIRONMENT                           | ANS-induced inefficiencies to be progressively removed to contribute to the global ICAO aspirational goals for CO <sub>2</sub> emissions. |  |  |  |  |  |  |
|                                       | To benefit from achieved flight efficiency gains.   |  |  |  |  |  |  |
| FLEXIBILITY                           | To absorb required changes to individual business and operational trajectories.   |  |  |  |  |  |  |
| INTEROPERABILITY                      | Essential at an operational and technical level.  |  |  |  |  |  |  |
| PARTICIPATION BY<br>THE ATM COMMUNITY | Pre-agreed level of participation to make the maximum shared use of the air navigation resources.   |  |  |  |  |  |  |
| PREDICTABILITY                        | No increase in ANS delivery variability including asset availability.   |  |  |  |  |  |  |
| SAFETY                                | Zero ANS-related accidents and a significant (50%) reduction of ANS-related serious incidents.  |  |  |  |  |  |  |
| SECURITY                              | Zero significant disruptions due to cyber incidents   |  |  |  |  |  |  |

Achieving the above ambitions and realizing the GANP vision will require a series of transformational changes.

## 2. STEP 2: KNOW YOUR SYSTEM – IDENTIFY OPPORTUNITIES, ISSUES AND SET OBJECTIVES

- 2.1 The purpose of Step 2 is to develop a detailed understanding of the performance behaviour of the system (this includes producing a list of opportunities and issues), and to decide which specific performance aspects are essential for meeting the general expectations. The essential performance aspects are those which need to be actively managed (and perhaps improved) by setting performance objectives.
- 2.2 Based on the scope, context and general ambitions/expectations which were agreed to during the previous step, the system should be analysed in order to develop an inventory of present and future opportunities and issues (weaknesses, threats) that may require performance management attention. This part of the process is generally known as the SWOT (strengths, weaknesses, opportunities and threats) analysis.
- 2.3 A SWOT analysis, requires the identification of:
  - <u>Strengths</u>: internal attributes of a system or an organization that can help in the realization of ambitions or in meeting expectations.
  - <u>Weaknesses</u>: internal attributes of a system or an organization that are a detriment to realizing ambitions or meeting expectations.
  - Opportunities: are external conditions that help in the realization of ambitions or in meeting expectations.

- *Threats*: external conditions that are a detriment or harmful to realizing ambitions or meeting expectations.
- Once the strengths, weakness, opportunities and threats are identified, action can be taken to target and exploit or remove these factors. The SWOT analysis should be conducted at local/national level.

#### Regional objectives

- 2.5 Based on regional performance and operational needs, differences, constraints and opportunities, MIDANPIRG is responsible for defining regional planning and implementation priorities, aligned with the GANP.
- Considering the global objectives defined in the GANP and those identified by States, within the key performance areas prioritized in step 1, MIDANPIRG may set common objectives to be pursued by the States within the Region and to be monitored at regional level.

#### 3. STEP 3: QUANTIFY OBJECTIVES AND SET TARGETS

- The principle of "reliance on facts and data for decision-making" implies that objectives should be specific, measurable, achievable, relevant and time-bound (SMART). The purpose of Step 3 in the process is to ensure that these aspects are properly addressed.
- During this step, the current/past performance (Perfromance Baseline), expected future performance, as well as actual progress in achieving performance objectives is quantitatively expressed by means of Key Performance Indicators (KPIs).
- KPIs are not often directly measured. They are calculated from supporting metrics according to clearly defined formulas. Performance measurement is therefore done through the collection of data for the supporting metrics.
- Data collection should take place at the most detailed level of granularity that can be afforded because the availability of detailed data greatly increases the effectiveness of the performance-based approach.
- Performance targets are closely associated with performance indicators (KPIs) as they represent the values of performance indicators that need to be reached or exceeded to consider a performance objective as being fully achieved.
- To understand how challenging it is to reach a target, one should know the baseline performance. The difference between the baseline and the target is called the performance gap. The determination of the baseline performance (calculation of baseline indicator values) is done based on the previous iteration of the process (historical data).

#### List of regional indicators

The GANP includes a series of KPIs linked to the catalogue of performance objectives within the 11KPAs. At the Regional level, MIDANPIRG defines regional performance objectives, using the key performance indicators (KPIs) of the GANP, to achieve regional performance ambitions. The list of KPIs to be used for the regional level is as follows:

**Table 3. MID Air Navigation KPIs** 

| KPI<br>(KPAs)                    | Title / Definition   | Measurement Units   | Variants   |
|----------------------------------|--|---|--|
| KPI01 (predictability)           | Departure punctuality Percentage of flights departing from the gate on-time (compared to schedule).  | % of flights  | Variant to be selected from those available in the GANP  |
| KPI02<br>(Efficiency             | Taxi-out additional time Actual taxi-out time compared to an unimpeded/reference taxi-out time.  | e compared to an unimpeded/reference Minutes/flight   |  |
| Environmental<br>Impact)         |  |   |  |
| KPI 04 (Efficiency)              | Filed flight plan en-route extension Flight planned en-route distance compared to a reference ideal trajectory distance.   | % excess distance   | Variant, using a 40 NM cylinder around the departure airport and a 100 NM cylinder around the destination airport as the start/end of en-route airspace. |
| KPI06<br>(Capacity)              | En-route airspace capacity The maximum volume of traffic an airspace volume will safely accept under normal conditions in a given time period.   | Movements/hr  | Variant to be selected from those available in the GANP  |
| KPI09<br>(Capacity)              | Airport peak capacity The highest number of operations an airport can accept in a one-hour time frame (also called declared capacity). Can be computed for arrivals, departures or arrivals + departures.  | Number of arrivals /<br>hour  | Variant to be selected from those available in the GANP  |
| KPI13 (Efficiency Environmental  | Taxi-in additional time Actual taxi-in time compared to an unimpeded/reference taxi-in time  | Excess taxi-in time in<br>Minutes/flight  | Variant to be selected from those available in the GANP  |
| Impact)  KPI14  (predictability) | Arrival punctuality Percentage of flights arriving at the gate on-time (compared to schedule)  | % of flights  | Variant to be selected from those available in the GANP  |
| KPI20<br>(Safety)                | Number of Aircraft Accidents Accident' is defined in ICAO Annex 13, Chapter 1-Definitions; ADREP: Accident Data Report   | Number of accidents /<br>year   | Variant 1 (GASP): Aircraft MTOW > 2 250 kg<br>1.1 National accident occurrence level   |
| KP121<br>(Safety)                | Number of RWY Incursions Number of occurrences at an aerodrome involving the incorrect presence of an aircraft, vehicle, or person on the protected area of a surface designated for the landing and take-off of aircraft. (CICTT Taxonomy definition) | Number of runway<br>incursions / year   | None   |
| KPI22<br>(Safety)                | Number of RWY Excursions  Number of veer offs or overruns of the runway surface.   | Number of runway<br>excursions / year   | None   |
| KP123<br>(Safety)                | Number of Airprox/TCAS Alert/Loss of separation/Near mid Air Collisions/Mid Air Collisions Number of airproxes, TCAS alerts, loss of separation as well as near collisions or collisions between aircraft in flight.                                   | Number of<br>airprox/TCAS<br>alert/loss of<br>separation/near midair<br>collisions/midair<br>collisions (MAC)/ year | Variants to be selected from those available in the GANP   |

<sup>3.8</sup> The measurement of these KPIs, as well as the progress in achieving performance objectives will be monitored at the regional level. Yet, States, as part of their national air navigation plan, should use additional KPIs to measure the progress in achieving all their performance objectives.

#### 4. STEP 4: SELECT SOLUTIONS

- 4.1 The purpose of this step is to combine the knowledge of baseline performance, opportunities and issues with the performance objectives and targets, in order to make decisions in terms of priorities, trade-offs, selection of solutions and resource allocation. The aim is to optimize the decisions to maximize the achievement of the desired/required (performance) results.
- 4.2 This is the part of the process where decision-makers need to know their options for mitigating pre-identified issues and therefore to exploit available opportunities. The list then needs to be analyzed in a performance oriented way, to assess/quantify the impact of drivers, constraints, impediments, etc., on the objectives under consideration. The solution might be ASBU or non-ASBU solution. Depending on the nature of the project, the output of this process is either a single preferred solution or a roadmap of selected solutions. In any case, decision-makers need to gain a good understanding of the strategic fit, the benefits, cost and feasibility of each option for operational improvement.
- 4.3 States should consider the operational improvements (ASBU elements) within the ASBU framework as potential solutions to improve the selected objectives/KPIs in the operational environment under analysis. In order to help States with this task, ICAO has developed the Air Navigation System Performance Analysis (AN-SPA) tool, available for free at: https://www4.icao.int/ganpportal/ANSPA/Reports
- 4.4 Considering the identified needs at regional level, the ICAO SARPs linked to the ASBU framework, the required performance improvements, the States' needs and capabilities and users' requirements, MIDANPIRG sets in the MID Region Air Navigation Strategy (MID Doc 002) available at: <a href="https://www.icao.int/MID/MIDANPIRG/Pages/MID-Docs.aspx">https://www.icao.int/MID/MIDANPIRG/Pages/MID-Docs.aspx</a>, the list of priority 1 ASBU Threads/Elements with their associated areas of applicability and targets, for implementation by States and monitoring at the regional level.
- 4.5 In addition to the priority 1 ASBU Elements, States should report to ICAO all the optimum solutions that they have identified for the achievement of the agreed performance objectives, in order to be included in the annual Web-based MID Air Navigation Report available at: <a href="https://www.icao.int/MID/MIDANPIRG/Pages/MID-AN.aspx">https://www.icao.int/MID/MIDANPIRG/Pages/MID-AN.aspx</a>.

#### 5. STEP 5: IMPLEMENT SOLUTIONS

- 5.1 Step 5 is the execution phase of the performance management process. This is where the changes and improvements that were decided upon during the previous steps are organized into detailed plans, implemented, and begin delivering benefits.
- 5.2 Once the optimum solution/s has/have been identified, it is the moment to start the execution phase of the performance management process. The changes and improvements that have been identified as the optimum solution for the problem during the previous steps are organized into plans, implemented and begin delivering services to achieve the expected performance. During this execution phase, it is important to keep track of the project deployments (time, budget, etc.).

#### 6. STEP 6: ASSESS ACHIEVEMENTS

- 6.1 The purpose of Step 6 is to continuously keep track of performance and monitor whether performance gaps are being closed as planned and expected.
- 6.2 Once the project is implemented, it is time to assess the benefits from the implementation. This means measuring the performance of the operational environment under analysis once the solution/s has/have been deployed.
- 6.3 First and foremost, this implies data collection to populate the supporting metrics with the data needed to calculate the performance indicators. The indicators are then compared with the targets defined during Step 3 to draw conclusions on the speed of progress in achieving the objectives.
- 6.4 This step also includes monitoring progress of the implementation projects, particularly in those cases where the implementation of solutions takes several years, as well as checking periodically whether

all assumptions are still valid and the planned performance of the solutions is still meeting the (perhaps changed) requirements.

- 6.5 With regard to the review of actually achieved performance, the output of this step is simply an updated list of performance gaps and their causes. In practice, the scope of the activity is often interpreted as being much wider and includes recommendations to mitigate the gaps.
- 6.6 This is then called performance monitoring and review, which in addition to this step, includes step 1, 2 and 3.
- 6.7 For the purpose of organizing performance monitoring and review, the task can be broken down into five separate activities:
  - · Data collection
  - Data publication
  - Data analysis
  - · Formulation of conclusions; and
  - · Formulation of recommendations.
- 6.8 As part of the process to assess the achievements, States should calculate/estimate the benefits accrued from the implementation of the solutions implemented in step 5.
- 6.9 States should also report to ICAO on annual basis the status of implementation of the selected solutions and progress achieved. The updates will be reflected in the annual Web-based MID Air Navigation Report available at: <a href="mailto:icao.int/MIDANReport/Pages/default.aspx">icao.int/MIDANReport/Pages/default.aspx</a>; which will reflect also the priority 1 ASBU Threads/Elements implementation status against the objectives and targets as set forth in the MID Air Navigation Strategy (MID Doc 002), available at: <a href="mailto:MID Docs (icao.int">MID Docs (icao.int)</a>.
- 6.10 The following Tables available in the **Appendix** are used for the collection of detailed information related to the implementation of associated priority 1 ASBU Threads/Elements, which are used also for the determination of the performance indicators included in the MID Region Air Navigation Strategy (MID Doc 002): DAIM 3-1, DAIM 3-2, DAIM 3-3, DAIM 3-4, AMET 3-1, AMET 3-2, AMET 3-3, AMET 3-4, APTA 3-1, ACAS 3-1 and ASUR 3-1. Other Tables might be developed for other Threads/Elements.
- 6.11 The monitoring of these Tables is assigned to the relevant MIDANPIRG Sub Groups.

#### 7. MID Region Air Navigation Systems Performance Based Framework

7.1 The following Template could support States in the development of their National Air Navigation Plans (NANPs). It is used also to collect information from States on the implementation of the performance based approach (6 step approach) for the measurement of their air navigation system performance; and for the reporting and monitoring at regional level.

### MID Region Air Navigation Systems Performance Based Framework/Template

#### Column

- (1) Scope of Performance Improvement
- (2) KPA (from the ICAO defined 11 Key Performance Areas (KPAs))
- (3) Performance Objectives (ambition/expectations)
- (4) KPIs based on the ICAO list of KPIs and associated variant
- (5) The Baseline of each KPI
- (6) The target of the KPI
- (7) Selected ASBU element(s) /Enabler(s) and/or Non ASBU solution(s) for each operational improvement
- (8) Target Implementation date
- (8)(9) Remarks/Progress

**Note:** The following is just a Sample

| Scope/<br>Applicability | KPA & Focus<br>Area                                    | Performance<br>Objective                     | KPI/ Variant   | KPI Baseline            | KPI Target              | Operational Improvements<br>(ASBU Elements/Enablers<br>& Non ASBU) | Target Date             | P Formatte |

#### DAIM Digital Aeronautical Information Management

In order to assist States in the planning for the transition from AIS to AIM in an expeditious manner, the following Tables, should be used:

- 1- Table DAIM 3-1 sets out the requirements for the Provision of AIS/AIM products and services based on the Integrated Aeronautical Information Database (IAID). It reflects the transition from the current product centric AIS to data centric AIM. For the future digital environment, it is important that the authoritative databases are clearly designated and such designation must be published for the users. This is achieved with the concept of the Integrated Aeronautical Information Database (IAID), a single access point for one or more authoritative databases (AIP, Terrain, Obstacles, AMDB, data-driven charting, etc.) for which the State is responsible. This Table will be used for the monitoring of the GANP and MID Region Air Navigation Strategy element DAIM-B1/1.
- 2- Table DAIM 3-2 sets out the requirements for aeronautical data quality. It will be used for the monitoring of the GANP and MID Region Air Navigation Strategy element DAIM-B1/1.
- 3- **Table DAIM 3-3** sets out the requirements for the implementation of the World Geodetic System 1984 (WGS-84). The requirement to use a common geodetic system remains essential to facilitate the exchange of data between different systems. The expression of all coordinates in the AIP and charts using WGS-84 is an important first step for the transition to AIM. This Table will be used for the monitoring of the GANP and MID Region Air Navigation Strategy element DAIM-B1/1.
- 4- Table DAIM 3-4-1 sets out the requirements for the provision of Terrain and Obstacle data sets for Area 1 and Area 4. It will be used for the monitoring of the GANP and MID Region Air Navigation Strategy elements DAIM-B1/3 and DAIM-B1/4.
- 5- Table DAIM 3-4-2 sets out the requirements for the provision of Terrain and Obstacle data sets for Area 2. It will be used for the monitoring of the GANP and MID Region Air Navigation Strategy elements DAIM-B1/3 and DAIM-B1/4.
- 6- Table DAIM 3-4-3 sets out the requirements for the provision of Terrain and Obstacle data sets for Area 3 and implementation of Airport Mapping Databases (AMDB). It will be used for the monitoring of the GANP and MID Region Air Navigation Strategy elements DAIM-B1/3, DAIM-B1/4 and B1/5.

#### Table DAIM 3-1

## Provision of AIS/AIM products and services based on the Integrated Aeronautical Information Database (IAID)

#### EXPLANATION OF THE TABLE

#### Column:

- Name of the State or territory for which the provision of AIS/AIM products and services based of the IAID is required.
- 2 Requirement for the implementation and designation of the authoritative IAID, shown by:
  - FI Fully Implemented
  - PI Partially Implemented
  - NI Not Implemented
  - Note 1—The IAID of a State is a single access point for one or more databases (AII Terrain, Obstacles, AMDB, etc.). The minimum set of databases which shoul be integrated is defined in Annex 15.
  - Note 2 The information related to the designation of the authoritative IAID should be published in the AIP (GEN 3.1)
- Requirement for an IAID driven AIP production, shown by:
  - FI Fully Implemented (eAÎP: Text, Tables and Charts)
  - PI Partially Implemented
  - NI Not Implemented
  - Note 3 AIP production includes, production of AIP, AIP Amendments and AIP Supplements
  - Note 4 Charts' GIS-based database should be interoperable with AIP database
- 4 Requirement for an IAID driven NOTAM production, shown by:
  - FC Fully Compliant
  - NC Not Compliant
- 5 Requirement for an IAID driven SNOWTAM processing, shown by:
  - FI Fully Implemented
  - NI Not Implemented
- 6 Requirement for an IAID driven PIB production, shown by:
  - FC Fully Compliant
  - PC Partially Compliant
  - NC Not Compliant
- 7 Requirement for Procedure design systems to be interoperable with the IAID, shown by:
  - FI Fully Implemented
  - PI Partially Implemented
  - NI Not Implemented
  - Note 5 full implementation includes the use of the IAID for the design of the procedures and for the storage of the encoded procedures in the IAID
- 8 Requirement for ATS systems to be interoperable with the IAID, shown by:
  - FI Fully Implemented
  - PI Partially Implemented
  - NI Not Implemented
- Action Plan short description of the State's Action Plan with regard to the provision of AIN products and services based on the IAID, especially for items with a "PC", "PI", "NC" or "NI status, including planned date(s) of full compliance, as appropriate.
- 10 Remarks additional information, including detail of "PC", "NC", "PI" and "NI", as appropriate

# TABLE DAIM-3-1 Provision of AIS/AIM products and services based on the Integrated Aeronautical Information Database (IAID)

| State State | HAID | AIP | NOTAM | SNOWTAM      | PIB | Procedure<br>Design | ATS | Action Plan | Remarks       |

#### AMET Meteorological information

## **Table AMET 3-1**

## **Meteorological observations products**

#### **EXPLANATION OF THE TABLE**

#### Column

- 1 Name of the State
- 2 Status of implementation of Automatic Weather Observation System (AWOS) information, where:
  - FI Fully Implemented
  - PI Partially Implemented
  - NI Not Implemented
  - N/A Not Applicable
- 3 Status of implementation of Local reports (MET REPORT/SPECIAL), where:
  - FI Fully Implemented
  - PI Partially Implemented
  - NI Not Implemented
  - N/A Not Applicable
- 4 Status of implementation of Aerodrome reports (METAR/SPECI), where:
  - FI Fully Implemented
  - PI Partially Implemented
  - NI Not Implemented
  - N/A Not Applicable
- 5 Status of implementation of Lightning Information, where:
  - FI Fully Implemented
  - PI Partially Implemented
  - NI Not Implemented
  - N/A Not Applicable
- 6 Status of implementation of Ground-based weather radar information, where:
  - FI Fully Implemented
  - PI Partially Implemented
  - NI Not Implemented
  - N/A Not Applicable
- 7 Status of implementation of Meteorological satellite imagery, where:
  - FI Fully Implemented

PI – Partially Implemented

NI – Not Implemented

N/A – Not Applicable

8 Status of implementation of Aircraft meteorological report (ie. ADS-B, AIREP, etc.), where:

FI - Fully Implemented

PI – Partially Implemented

NI – Not Implemented

N/A – Not Applicable

9 Status of implementation of Vertical wind and temperature profiles, where:

FI – Fully Implemented

PI – Partially Implemented

NI – Not Implemented

N/A – Not Applicable

10 Status of implementation of Wind shear alerts, where:

FI – Fully Implemented

PI – Partially Implemented

NI – Not Implemented

N/A – Not Applicable

11 Remarks

# ACAS Airborne Collision Avoidance System (ACAS)

## Table ACAS 3-1

## EXPLANATION OF THE TABLE

Column

1

2

Name of the State Status of implementation: Y – Fully Implemented N – Not Implemented National Regulation(s) Reference(s) Remarks

| State | Status | Regulation Reference | Effective<br>Date | Remarks |
|-------|--------|----------------------|-------------------|---------|
| 1     | 2      | 3                    | 4                 | 5       |
|       |        |                      |                   |         |
|       |        |                      |                   |         |
|       |        |                      |                   |         |
|       |        |                      |                   |         |

#### ASUR Surveillance systems

## Table ASUR 3-1

# **Surveillance Implementation Monitoring Table**

## EXPLANATION OF THE TABLE

n

- Name of the State / ATS Units where Radar service provided
- 2
- Surveillance Gap
  Y Yes, non-radar covered area (GAP) exist
  - N No, GAP areas not existed
- Multi- Surveillance Data processing capability
  Y Yes, implemented
  N No, not implemented
- Surveillance Sensor used 4
  - $Y-Yes,\,implemented$
  - N No, not implemented
- Dual Surveillance sources
  - Y Yes, available
  - N No, not available
- Issuance of ADS-B Carriage Mandate
  - N No, not issued
  - Date effective date of ADS-B carriage mandate
  - Reference link to mandate regulation

| State/              | Surveillanc<br>e Gaps | Multi-<br>Surveillanc<br>e Data<br>Processing<br>Capability | Surveillance Sensor Used |                    |                  |      |       |                 | Dual<br>Surveillanc |      | -B carriage<br>nandate |
