ICAO ATFM Global Symposium November 2017

ATFM Innovation Day 3 13h30

Brian FLYNN
EUROCONTROL

What is Innovation

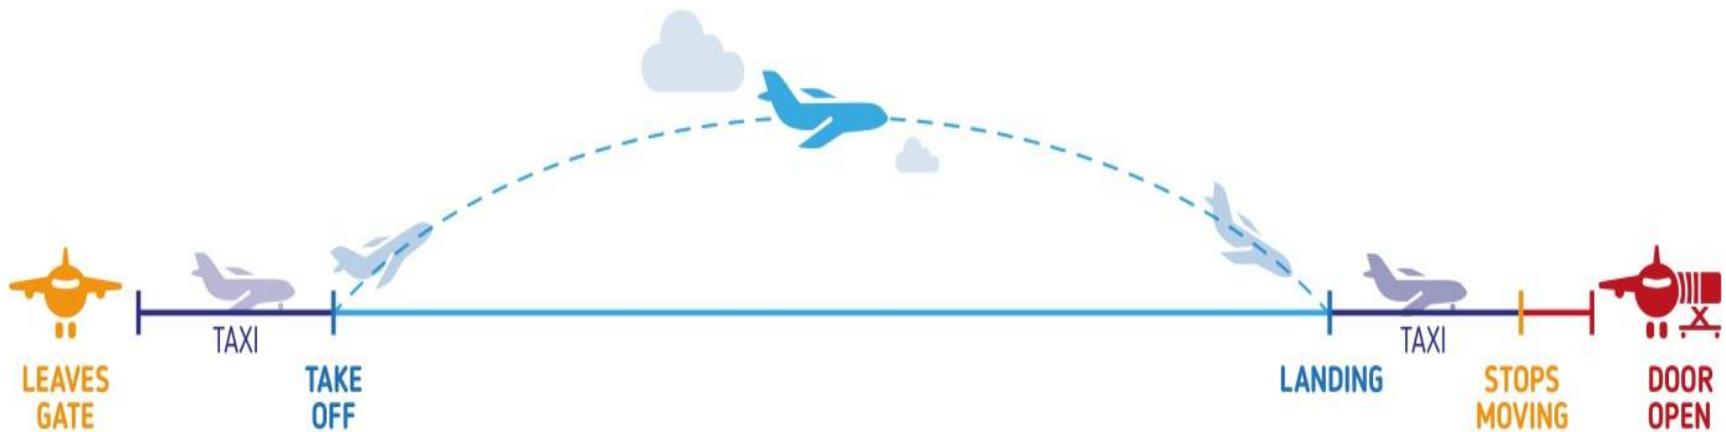

- ***Innovation:*** “*The process of translating an idea or invention into a good or service that creates value.*”
- This presentation is about translating several ideas into a service that creates value. It is not about technology.

Which delay to measure?

Network Manager
nominated by
the European Commission

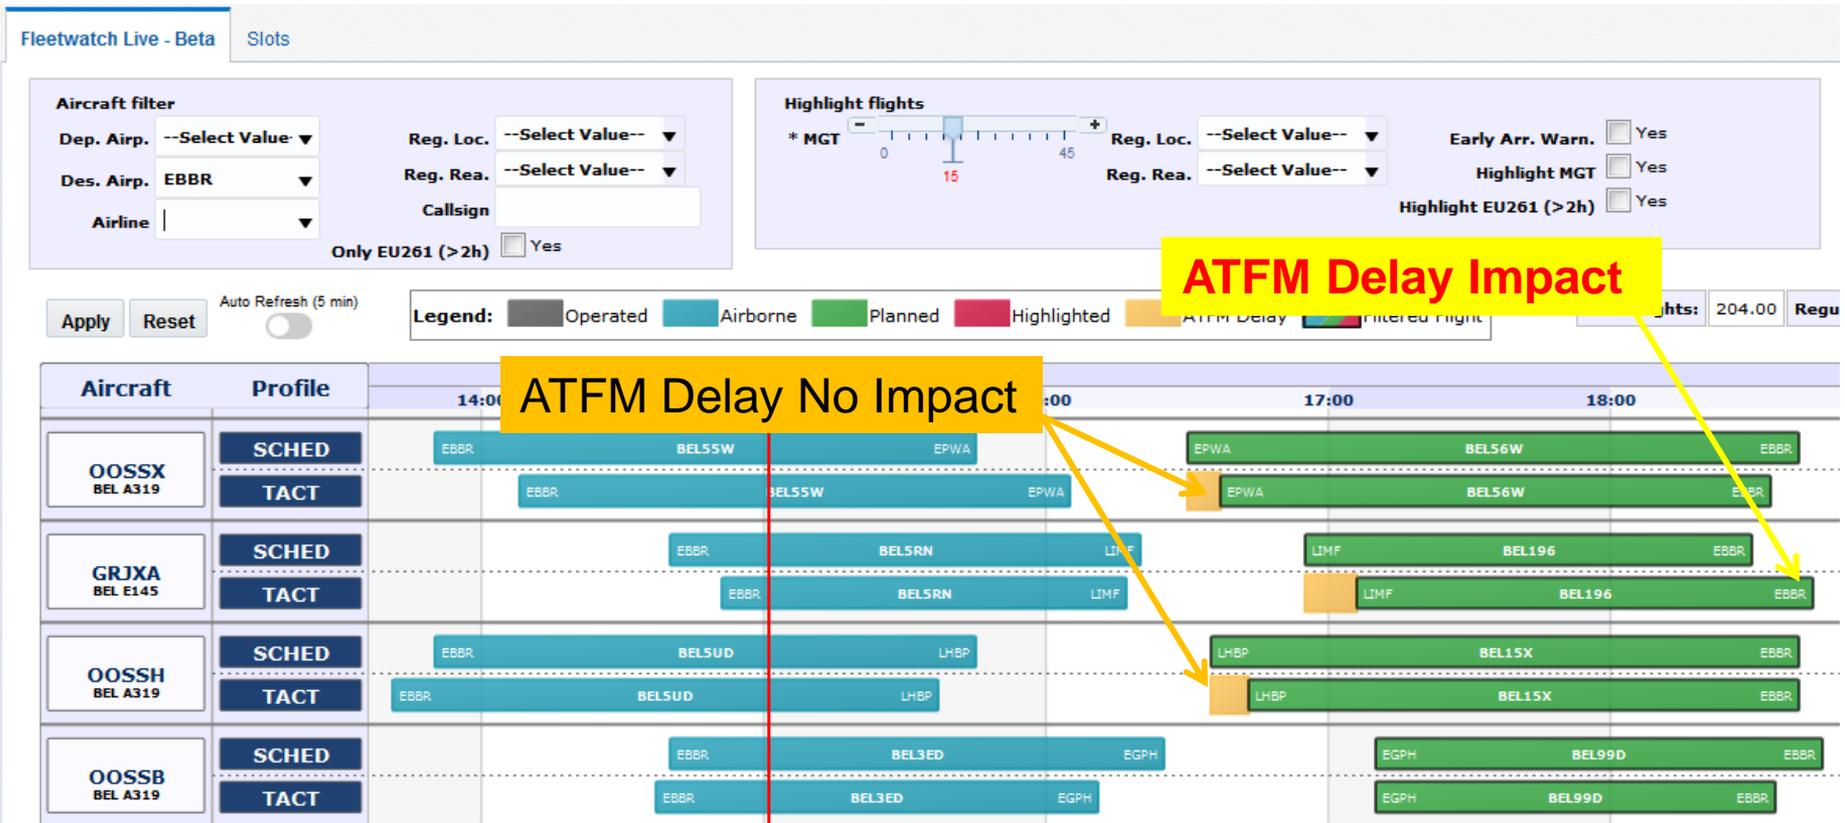

PICK A TIME, ANY TIME...

- Traditional ATFM is based on the **Flight Plan** but ignores **airline fleet schedule** and **airport arrival and departure slots**
- ***Fleetwatch-Live*** combines all these allowing all ATFM partners to optimise the network from all perspectives – ATM, Airport, Airline schedule.
- Full and transparent information sharing is the key

CODA Fleetwatch-Live

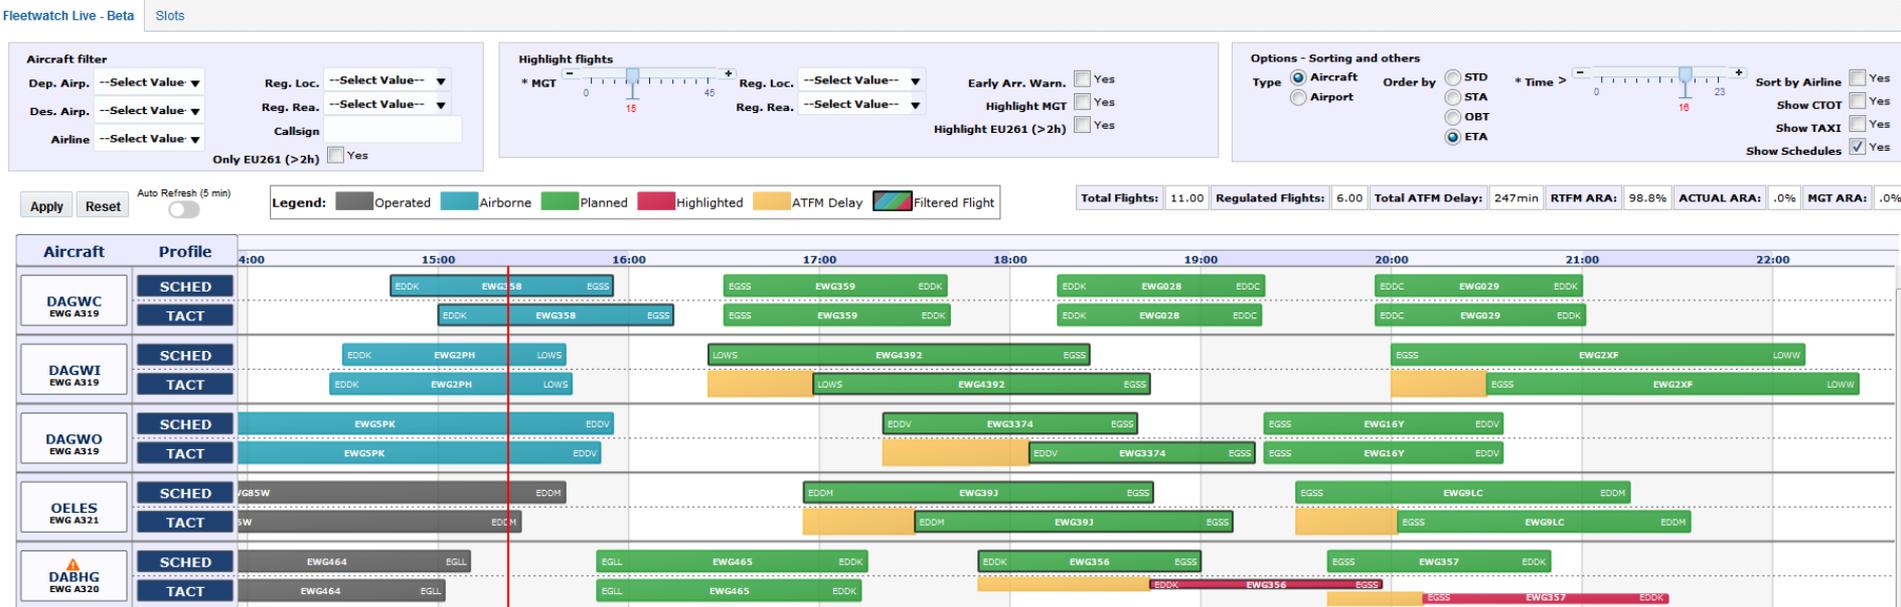

Not all ATFM delay causes actual arrival delay

CODA Fleetwatch-Live

Network Manager

the European Commission

Way Ahead:

- Share all operational data with full transparency – schedules, airport slots, flight plans
- Use all these parameters in the CDM process of ATFM, scheduling, airport slot allocation
- The technology is there today
