

**Destination Green**

ICAO Symposium on Aviation and Climate Change, "Destination Green", 14 – 16 May 2013

# Introduction to Sustainable Alternative Fuels for Aviation and ICAO's activities

Ph. Novelli – ICAO Environment Branch

# Content

- **Introduction to sustainable alternative fuels**
- **ICAO's activities**

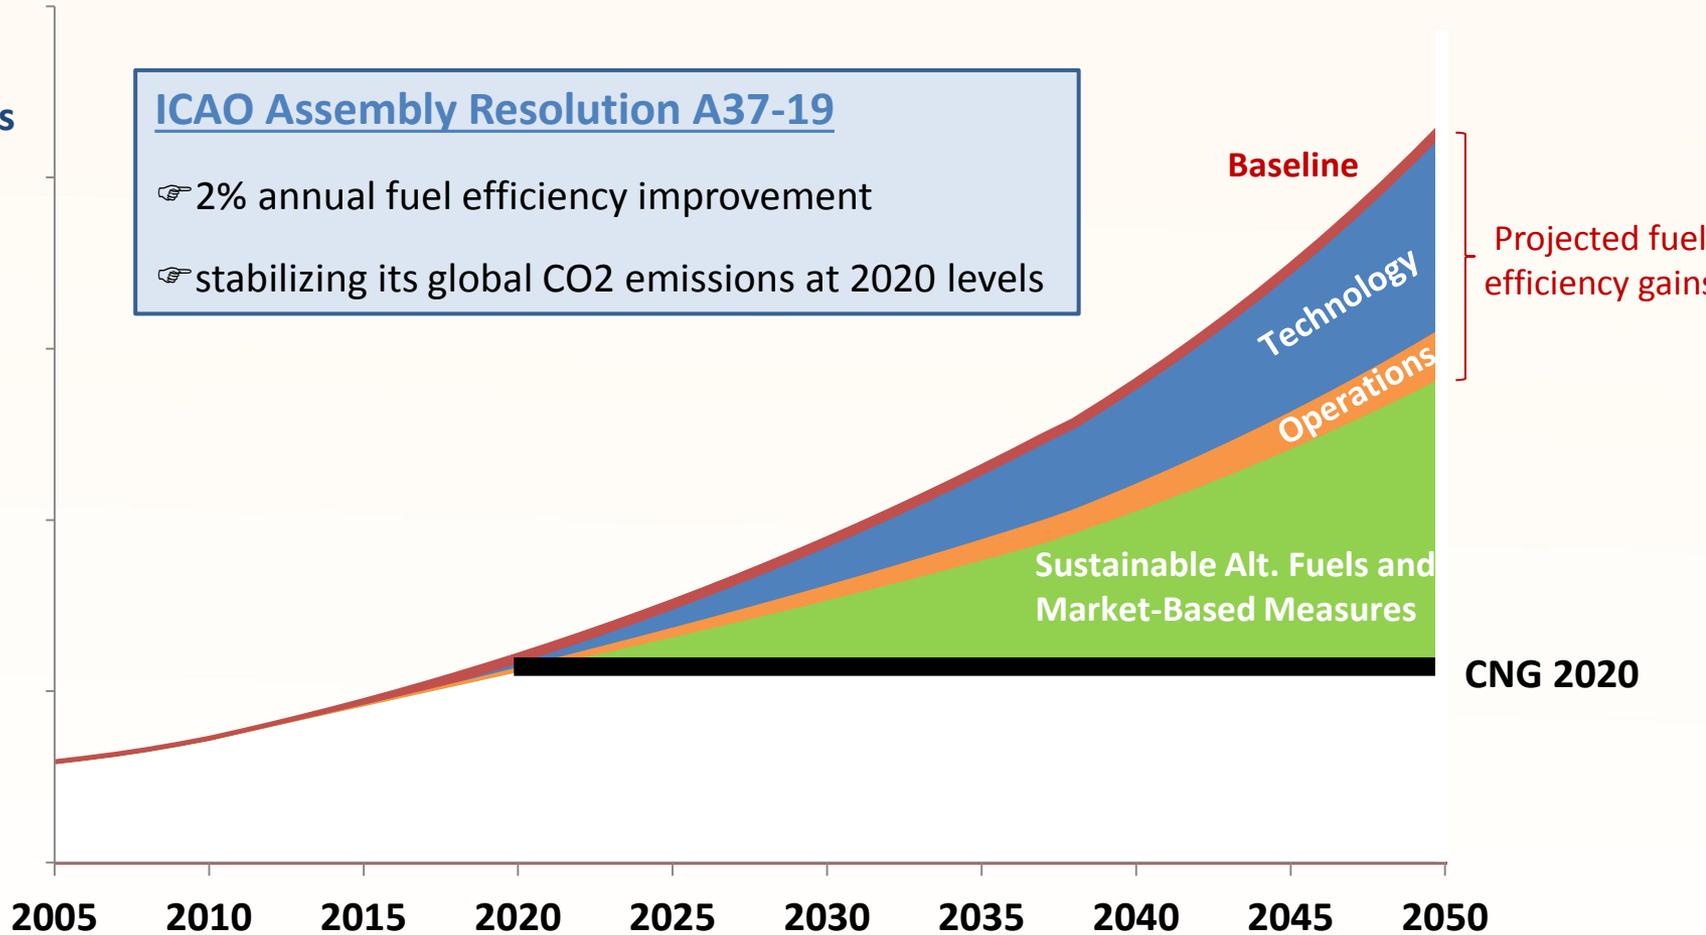

# Emission trends and aspirational goals

CO<sub>2</sub>  
Emissions

ICAO Assembly Resolution A37-19

- 2% annual fuel efficiency improvement
- stabilizing its global CO<sub>2</sub> emissions at 2020 levels

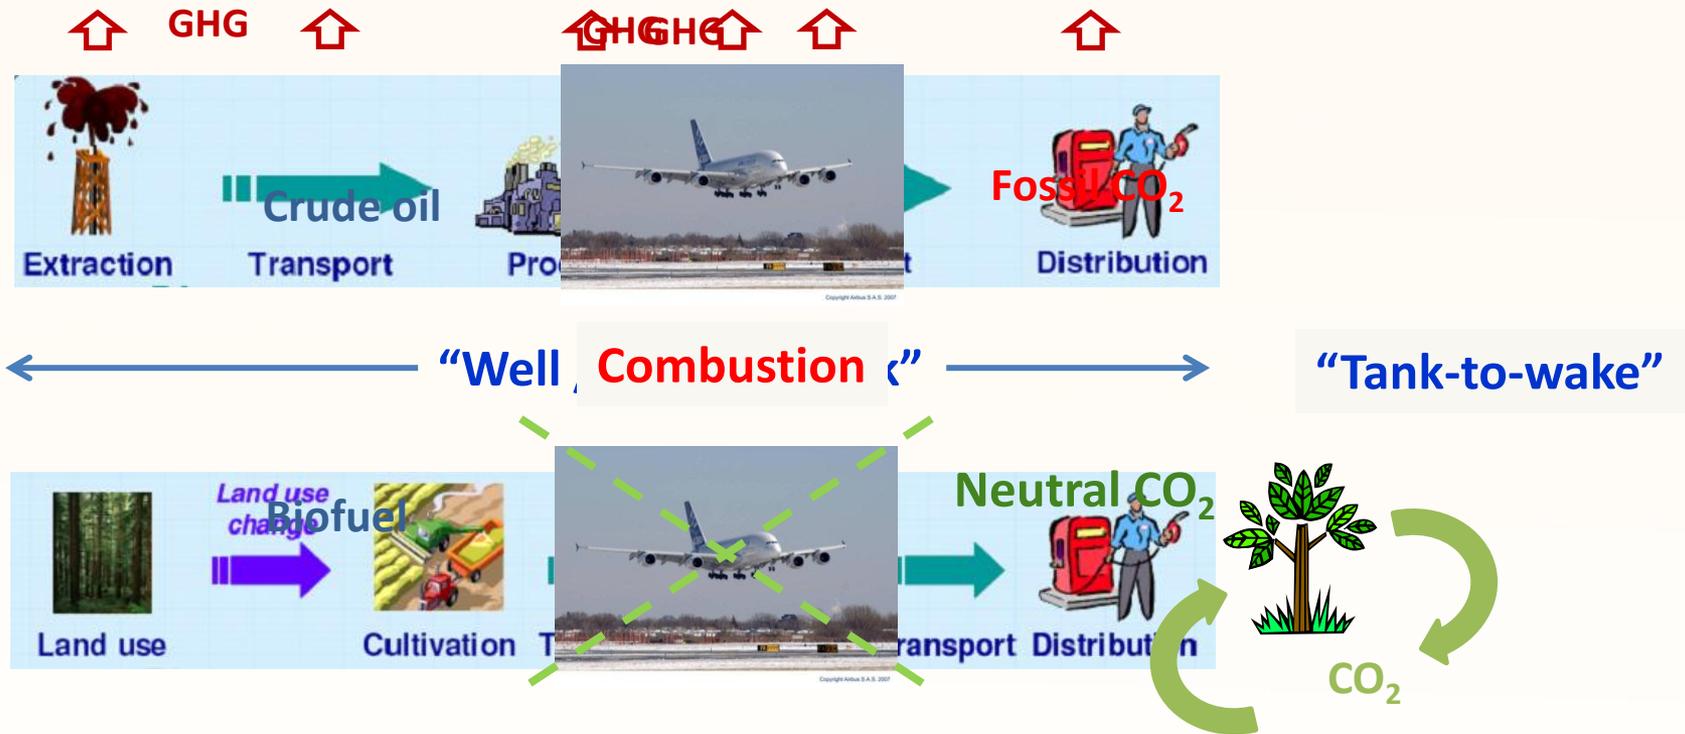

# Sustainable alternative fuels

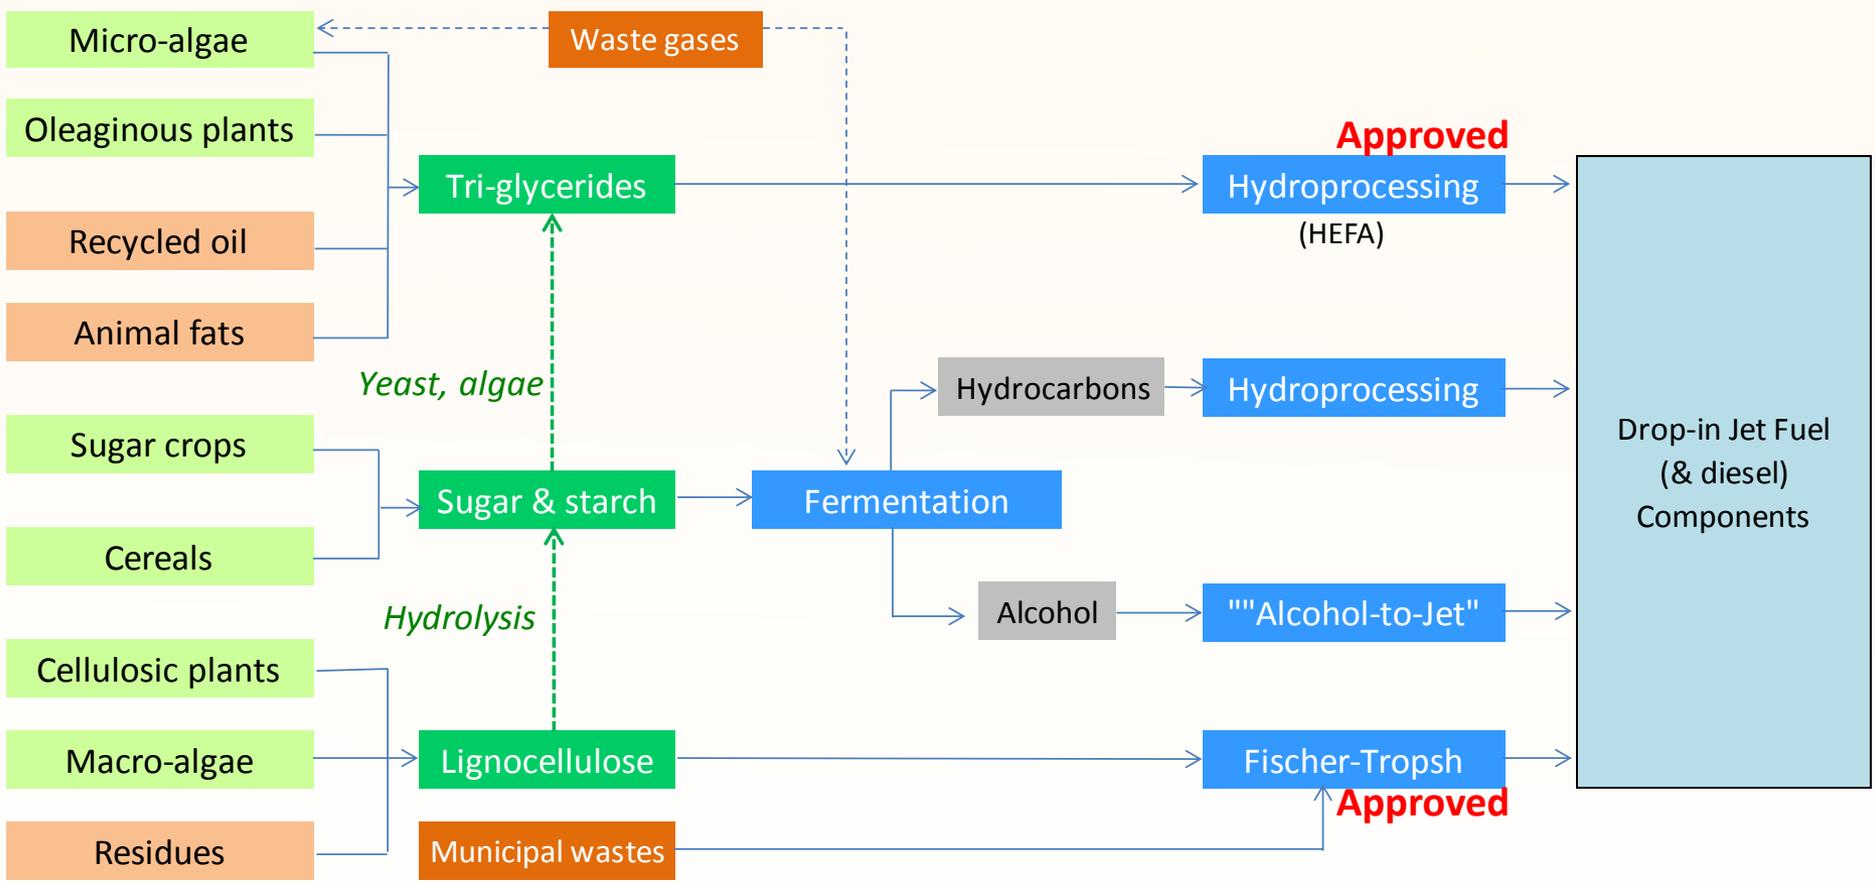

- Hydrocarbon “drop-in” fuels
- Sourced from renewable biomass or wastes
- If properly produced, potential for significant emissions reduction **on a life cycle basis**

# GHG emissions on a life cycle basis

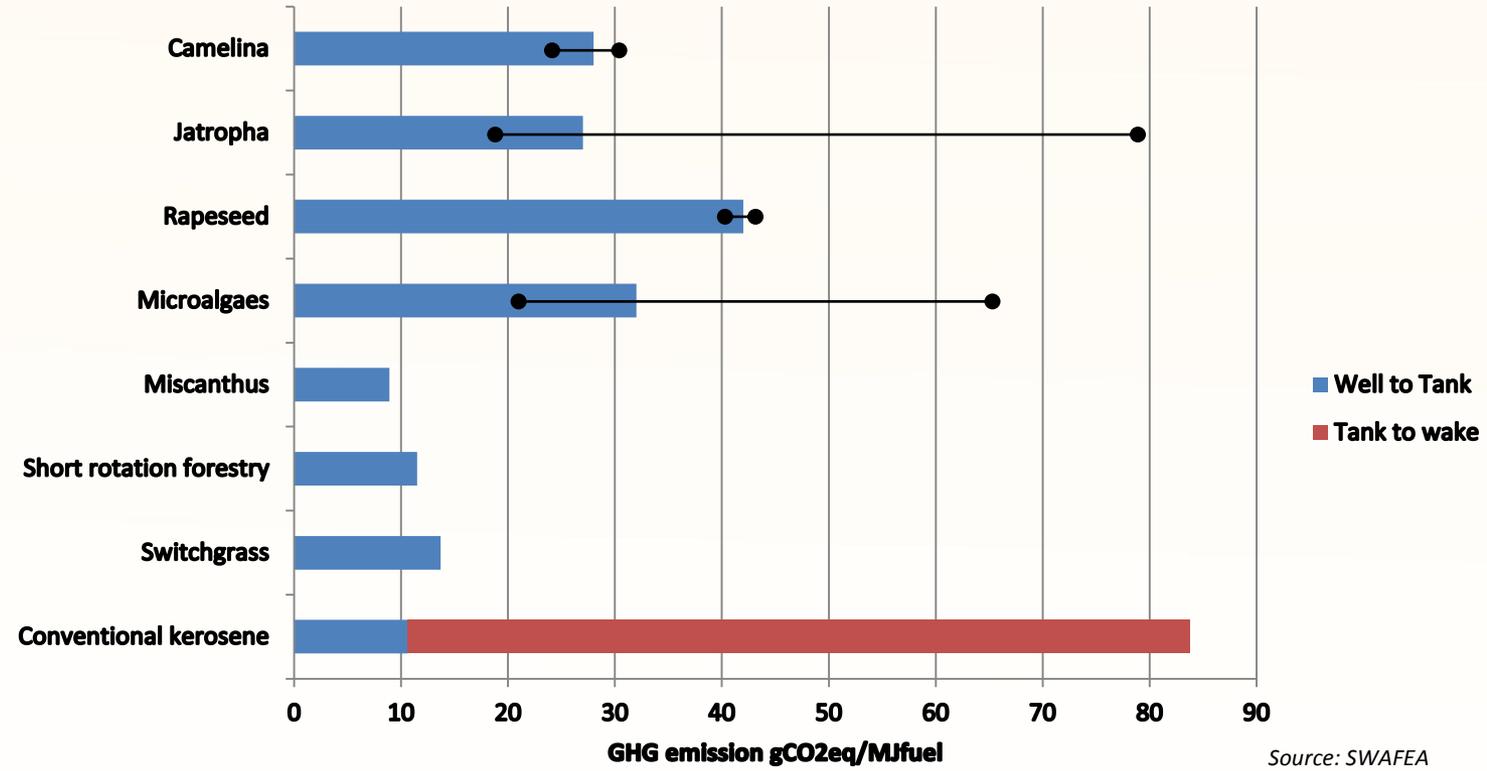

*Simplified view of pathways for alternative jet fuels*

# Example of biofuels GHG savings

**Potential GHG emission reduction with biofuels**  
**Indicative mean values (with no land use change)**

Source: SWAFEA

# Corner-stones in alternative fuels development for aviation

- **First “drop-in” fuels approved for aviation**
    - ☞ ASTM 2009 (FT) and 2011 (HEFA)
  - **Demonstration flights (2008-2011)**
    - Virgin Atlantic (2008), Airbus (2008), Air New Zealand(2008), Continental (2009), JAL (2009), KLM (2009)...*
    - ⇒ Demonstration of performance and safety
  - **Emergence of commercial flights (2011 ⇒ ...)**
    - Proof of safe and harmless regular use
    - Proof of airlines interest and engagement
- ⇒ **It works – The challenge is now to deploy**

# ICAO and sustainable alternative fuels

- **Resolution A37-19 (2010):** requests States to
  - develop policy actions to accelerate appropriate development and use
  - work together through ICAO to exchange information and best practices
  - consider measures and incentives to support:
    - research and development,
    - investments in feedstock cultivations and production facilities
    - commercialization and use
  
- **ICAO: a facilitator for the emergence of alt. fuels**

# Achievements and on-going initiatives

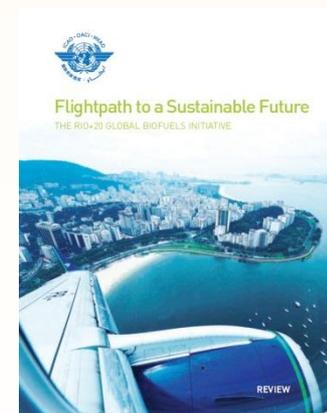

## ■ ICAO's conference and workshops

- ✓ Rio November 2009: Conference Aviation and alternative fuels
- ✓ Montreal Feb. 2009 and Oct. 2011: workshops on alternative fuels

## ■ Rio+20: the ICAO's "Flightpath" initiative

- ✓ Four connected flights using biofuels from Montréal to São Paulo
- ✓ "Green flights": biofuels + flight optimization
- ✓ <http://www.icao.int/environmental-protection/Pages/Rio+20.aspx>

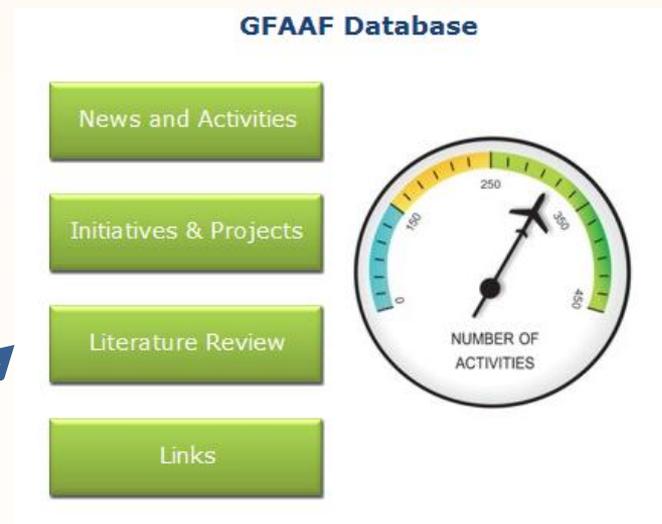

# Global Framework for Aviation Alternative Fuels (GFAAF)

(<http://www.icao.int/environmental-protection/GFAAF/Pages/default.aspx>)

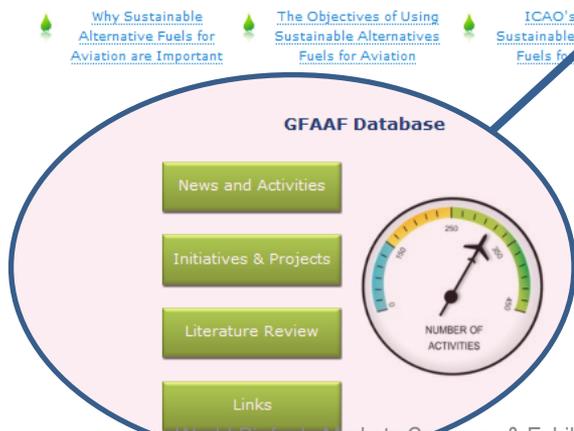

Destination Green 

The screenshot shows the ICAO website interface. At the top left is the ICAO logo with the text "INTERNATIONAL CIVIL AVIATION ORGANIZATION" and "A United Nations Specialized Agency". Navigation links include "About ICAO", "Strategic Objectives", "Meetings & Events", "Publications", "Online Store", and "Employment". A search bar is present. The main content area is titled "ICAO Global Framework for Aviation Alternative Fuels" and contains introductory text about sustainable alternative fuels and their potential to reduce greenhouse gas emissions. A sidebar on the left lists various environmental protection topics.

The GFAAF Database interface features a vertical stack of four green buttons: "News and Activities", "Initiatives & Projects", "Literature Review", and "Links". To the right of these buttons is a circular gauge labeled "NUMBER OF ACTIVITIES". The gauge has a scale from 0 to 450 with major markings at 0, 100, 250, and 400. The needle is positioned at approximately 350.

This is a magnified view of the GFAAF Database interface, showing the same four green buttons and the circular gauge as seen in the previous block. The gauge needle is clearly visible at the 350 mark.

# The SUSTAF experts group

- **Mission:** “to facilitate the development and deployment of alternative fuels for aviation”
  - Initiated in July 2012
  - 40 experts from various geographic areas and stakeholders
- **Deliverable:** recommendations to support States and industry in developing and deploying sustainable alternative fuels
  - ⇒ To be presented to ICAO Assembly in October
- **Work focused on possible options**
  - To overcome near-term challenges for deployment
  - To address sustainability

# The SUSTAF experts group

- **Economics: critical issue**
- **Need to create a market perspective**
  - ⇒ Defining renewable energy policy considering aviation
- **Multidisciplinary coordinated approach at State's level**
- **Sustainability needs to be part of policy**
  - ⇒ Existing approaches to be combined to ensure sustainability
- **Potential benefit from increased harmonization or mutual recognition**

# Next steps

- **ICAO engaged in:**
  - Sharing information and successful practices
  - Building trends and projection for long term aviation emissions
- **Need to develop:**
  - a global view of future alternative fuel production
  - Means to account for change in GHG emissions
- **Aviation needs to connect with other sectors:**
  - In areas that would benefit from increased harmonization (e.g. sustainability, LCA emissions)
  - Projection for biomass availability and use

**SAAFA**

This page gathers news and activities related to alternative fuels for aviation since 2006 and is regularly updated with the last announcements.

- The items can be sorted by date, entity, country, product by clicking on the corresponding column title, or filtered by category.
- Plain text search is possible through the search function which will return all items containing the searched word.

Click here to change the SAAFA list.

Date	Summary	Entity	Country	Product	Category
2013-01-11	<p><b><u>USDA Announces Investments in Bioenergy Research and Development</u></b></p> <p>In the frame of President Obama's strategy to spur innovation of clean bioenergy in the United States and reduce dependence on foreign oil, Agriculture Secretary Tom Vilsack announced \$25 million to fund research and development of next-generation renewable energy and high-value biobased products from a variety of biomass sources. Four projects have been selected for funding through USDA's National Institute of Food and Agriculture (NIFA):</p> <ul style="list-style-type: none"> <li>• <b>Kansas State University</b> (5 M\$) to make the oilseed crop camelina a cost-effective biofuel and bioproduct feedstock - Camelina production will be incorporated into a cropping system with wheat-based crop rotations in Montana and Wyoming;</li> <li>• <b>Ohio State University</b> (6.5 M\$) for an anaerobic digestion system for the production of liquid transportation fuels and electricity from animal manure, agricultural residues, woody biomass and energy crops - the novel anaerobic digestion system will be integrated with partial oxidation and Fisher-Tropsch technologies to produce gasoline;</li> <li>• <b>Ceramatec, Inc.</b> (6.5 M\$) for the conversion of lignocellulosic biomass to infrastructure-compatible renewable diesel, biolubricants, animal feed and biopower - new hybrids of energy sorghum will be developed, and other biomass resources include switchgrass and forestry residues, the biomass will be converted to hydrocarbons using innovative pretreatment, fermentation and electrochemical technologies;</li> <li>• <b>USDA-Agricultural Research Service</b> (6.8 M\$) to develop an on-the-farm distributed technology for converting forest residues, horse manure, switchgrass and other perennial grasses into biofuels and high-value specialty chemicals - the process will use a patent-pending unit that will mimic the petroleum industry's catalytic cracking process.</li> </ul> <p>Grant recipients are required to contribute a minimum of 20 percent matching funds for research and development projects and 50 percent matching funds for demonstration projects.</p> <p><a href="#">Read more</a></p>	USDA	U.S.A	Biofuels	R&D
2013-01-11	<p><b><u>Introduction of synthetic GTL jet fuel at Doha airport</u></b></p> <p>A Qatar Airways Airbus A340-600 flight from Doha to London on Wednesday 9 February marked the introduction of commercial-scale synthetic jet fuel produced in Qatar. The natural gas-to-liquid (GTL) jet fuel, which is blended 50/50 with conventional Jet-A1, is being produced by the Pearl GTL plant, a venture involving Qatar Petroleum and Shell.</p>	Qatar Petroleum, Shell	QATAR	FT-GTL	Deployment

## Back to Initiatives & Projects List

<b>Sustainable Aviation Fuels Northwest (SAFN)</b>	
<b>Objective</b>	<b>Category</b>
SAFN's goal was to map a flight path to develop a safe, sustainable and economically viable aviation biofuels industry in the Northwest.	Feasibility study
<b>Description</b>	<b>Value-chain step</b>
The initiative was launched in July 2010 by Boeing, Alaska Airlines, the operators of the region's three largest airports – Port of Seattle, Port of Portland and Spokane International Airport – and Washington State University, a center for advanced biofuels research. Climate Solutions, a Northwest clean-energy nonprofit, was retained to manage a stakeholder process that included more than 40 organisations ranging across aviation, biofuels production, environmental advocacy, agriculture, forestry, federal and state government agencies, academic research and technical consultancies.	All
The SAFN initiative:	<b>Type of pathway</b>
<ul style="list-style-type: none"> <li>Analyzed the most promising, local biomass sources for commercialization;</li> <li>Assessed all phases required to develop a sustainable biofuel industry, including biomass production and harvest, refining, transport infrastructure and use; and</li> <li>Prioritized state and federal policy recommendations needed to spur creation of sustainable fuels for aviation.</li> </ul>	All
	<b>Starting time and duration</b>
	July 2010 - May 2011
	<b>Stakeholders</b>
	All types
	<b>Regional scope</b>
	Regional
	<b>Involved countries</b>
	U.S.A
	<b>Status</b>
	Closed
<b>Partners</b>	
Alaska Airlines, Boeing, Port of Portland, Port of Seattle, Spokane International Airport, Washington State University + 40 stakeholders	
<b>Achievements to date</b>	
SAFN published its report and recommendation in May 2011.
