States' Action Plans Seminar

3. ICAO Supporting Tools - Publicly available

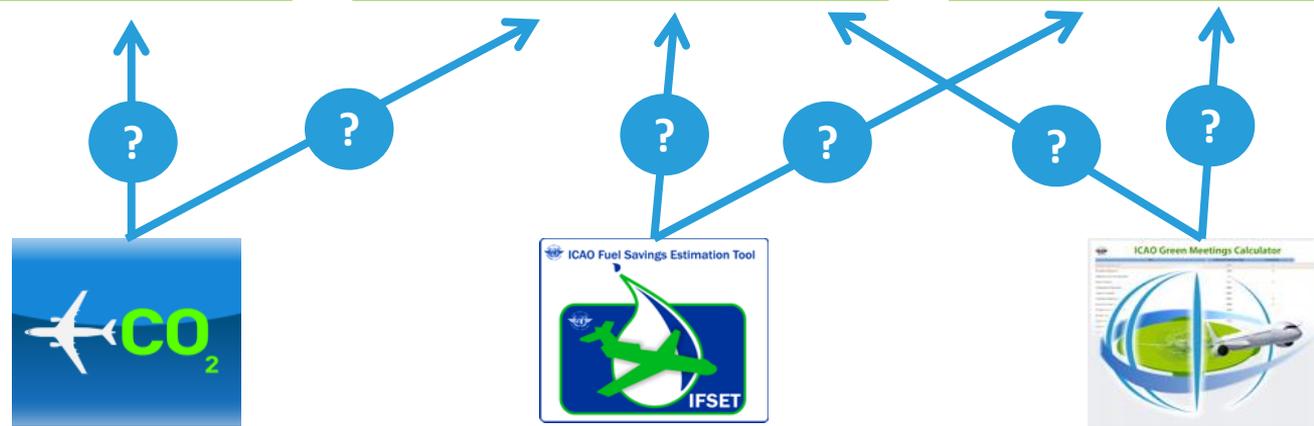

ICAO Secretariat

Baseline

Mitigation Measures

Expected Results

ICAO Carbon Emissions Calculator

Allows passengers to estimate CO₂ emissions from their air travel

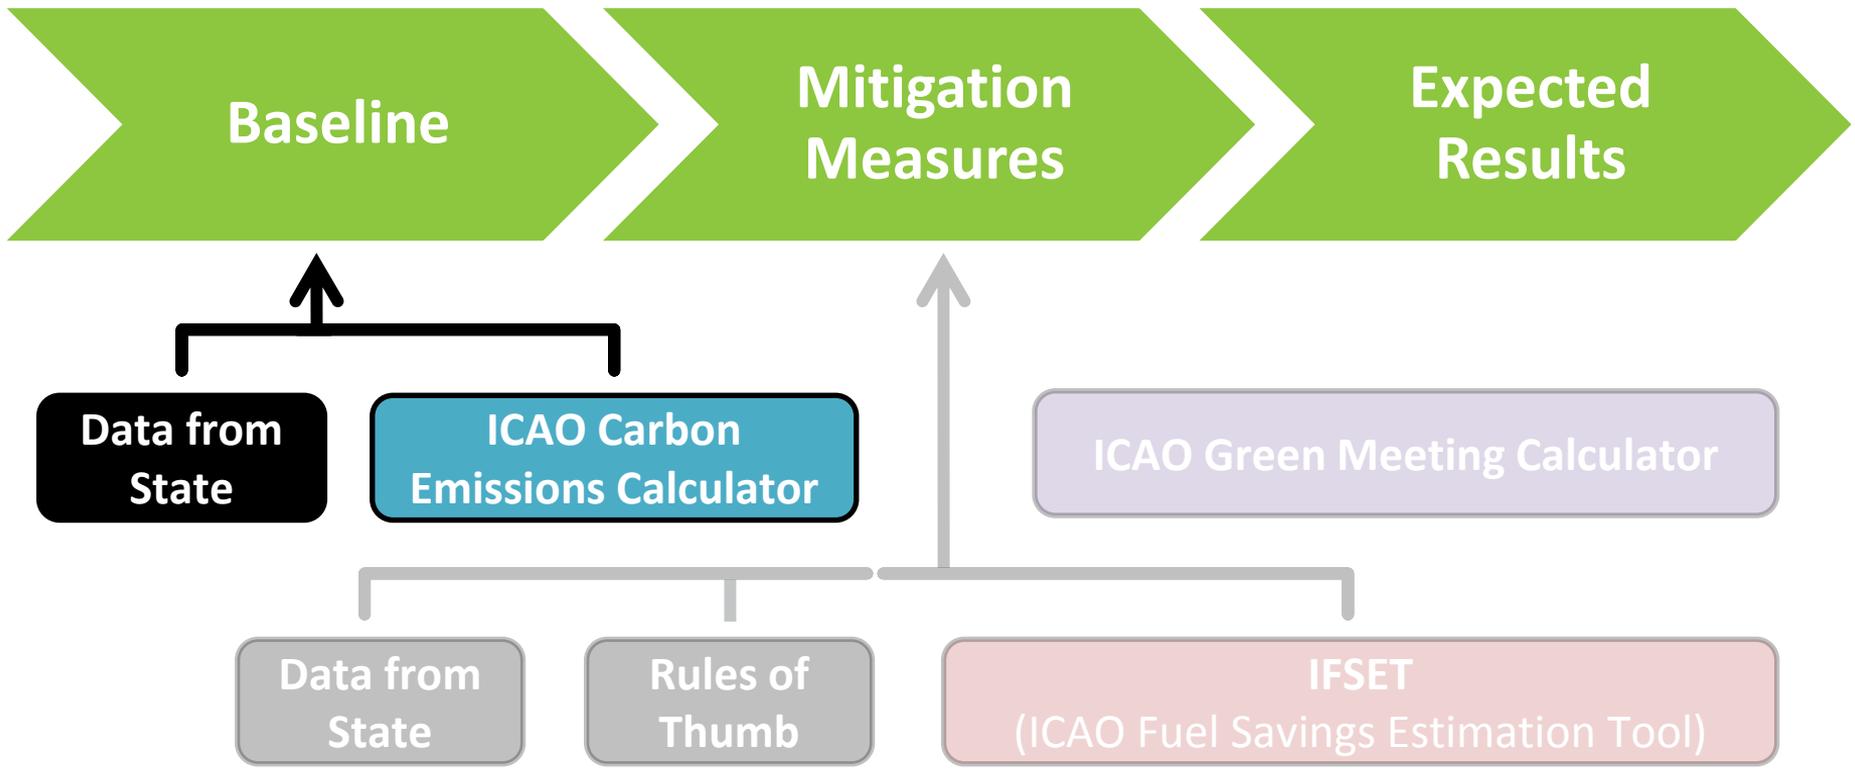

ICAO Fuel Savings Estimation Tool (IFSET)

To assist States in estimating fuel savings from operational improvements

ICAO Green Meetings Calculator

To support decision making in minimizing CO₂ emissions from air travel to attend meetings

ICAO

ENVIRONMENT

Estimating aircraft fuel burn and CO₂ emissions:

ICAO Carbon Emissions Calculator

- Proliferation of tools for calculating “carbon footprint” from aviation
 - Results differ by factor of 4 or more!
 - Unknown data sources and methodologies (black box)
 - Inconsistent basis for offsetting

- **Objectives**

- User-friendly, unbiased, tool to compute carbon emissions from air travel
- Suitable for use with offset programmes
- Best publicly available data
(transparency)
- Fully documented

- **Methodology Developed through CAEP**
 - **24 Member States** , global representation
 - **15 Observers**, primary aviation stakeholder representation
- **Expert input provided from**
 - ICAO Secretariat
 - ICAO Member States
 - Universities
 - NGOs
 - International Air Transport Association – IATA (Airlines)
 - International Coordinating Council of Aerospace Industries Associations – ICCAIA (Manufacturers)
- **Methodology is internationally recognized and accepted**
- **All UN air travel GHG inventories are prepared using the ICAO Calculator**

ICAO Carbon Emissions Calculator Public Interface

- Transparent
- Easy-to-use
- Publicly available
- Delivers consistent estimates of CO₂ – suitable for use with offset programs
- Available since June 2008

<http://www.icao.int/ENVIRONMENTAL-PROTECTION/CarbonOffset/Pages/default.aspx>

Carbon Emissions Calculator

ICAO has developed a methodology to calculate the carbon dioxide emissions from air travel for use in offset programmes.

The ICAO Carbon Emissions Calculator allows passengers to estimate the emissions attributed to their air travel. It is simple to use and requires only a limited amount of information from the user.

The methodology applies the best publicly available industry data to account for various factors such as aircraft types, route specific data, passenger load factors and cargo carried.

For additional information, please Contact us or refer FAQ or see the accompanying methodology to the ICAO Carbon Emissions Calculator.

The Carbon Calculator is additionally available in the Apple App Store as an iPhone and iPad application.

You can find your carbon footprint by entering your city of origin and destination.

If you have trouble viewing the Carbon Calculator, please click here.

| One Way/Round Trip | Cabin Class | Number of Passengers |
|--------------------|-------------------|----------------------|
| Round Trip | Economy | 1 |
| Leg | From City/Airport | To City/Airport |
| 1 | | |

ICAO Carbon Emissions Calculator User Interface for Action Plans

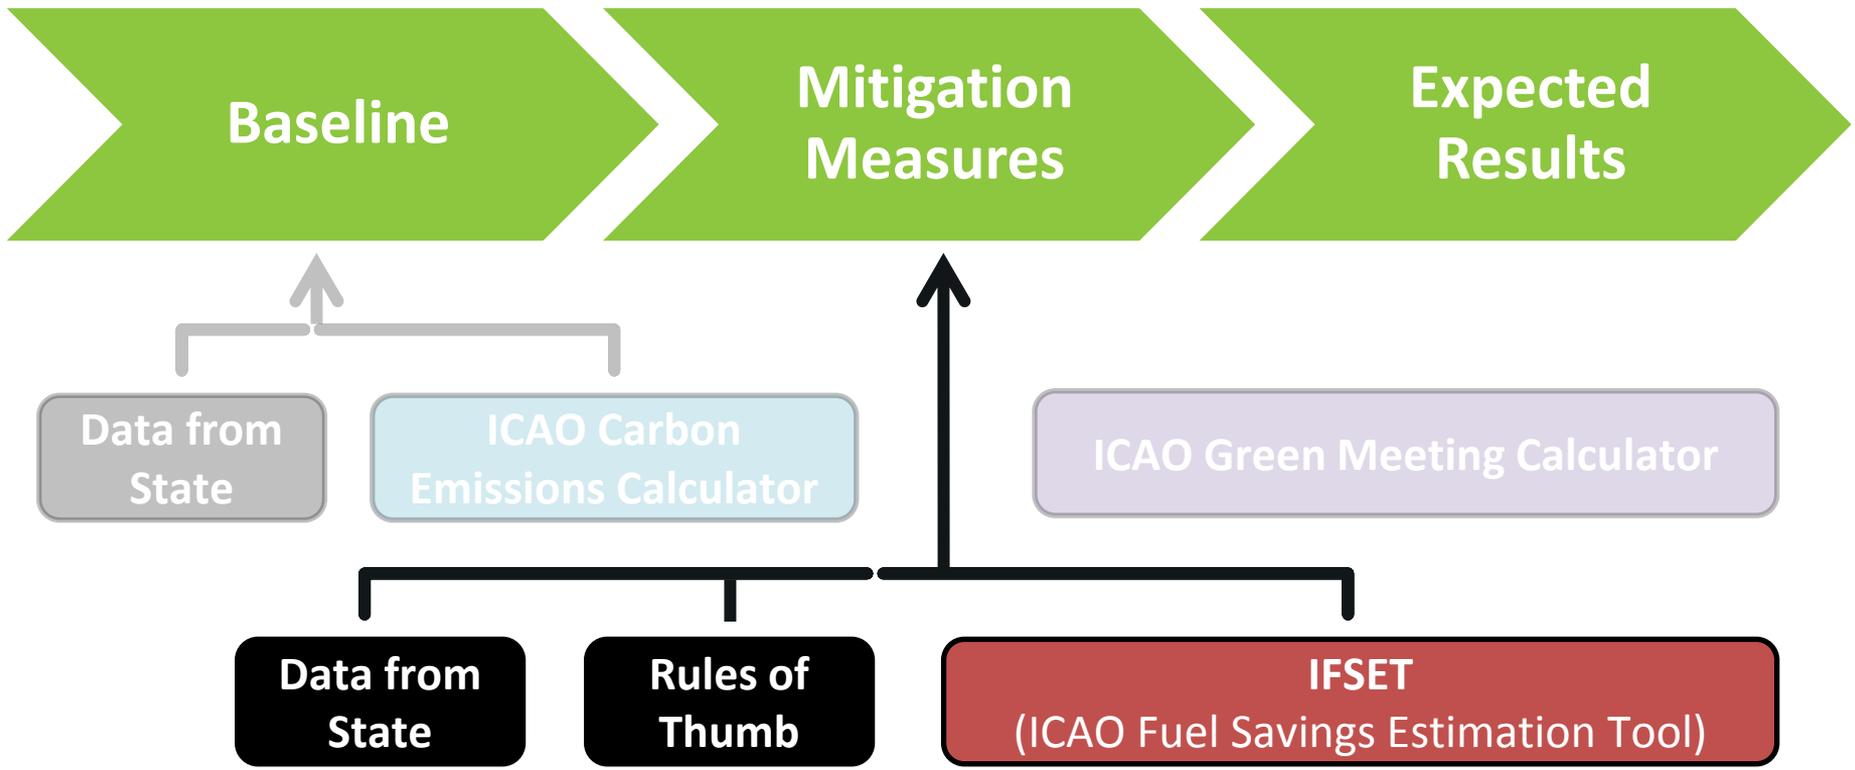

The screenshot shows the Microsoft Excel interface for the ICAO Carbon Emissions Calculator. The spreadsheet is titled "ICAO_Calculator_forStates_v2.6_Excel2007+.xslm [Read-Only] - Microsoft Excel". The ribbon includes File, Home, Insert, Page Layout, Formulas, Data, Review, View, Developer, and PowerPivot. The Home ribbon is active, showing options for Clipboard, Font, Alignment, Number, Styles, Cells, and Editing.

The spreadsheet content is as follows:

| | A | B | C | D | E | F |
|----|--|-------------------|---------------|----------------------|---------------------------------|---|
| 1 | ICAO Carbon Emissions Calculator (Entire Flight) Version 2.6 | | | | Results | |
| 2 |  © ICAO 2016 | | | | Total CO ₂ (tonnes): | |
| 3 | | | | | | |
| 4 | | | | | Total flights: | |
| 5 | | | | | Remarks: | |

| 24 | | | | | | |
| 25 | | | | | | |
| 26 | | | | | | |
| 27 | | | | | | |

A button labeled "Click to Compute CO₂" is located in cell D9. A yellow highlighted row (row 13) contains the instruction "Insert schedule data below this row".

Simply enter the flight schedule for the State

ICAO

ENVIRONMENT

Estimating Fuel Savings from Operational Changes:

ICAO Fuel Savings Estimation Tool (IFSET)

- States' needs to compute the fuel savings from operational improvements
- Previous ICAO guidance - Rules of Thumb (2006)
 - Avg. fuel burn per minute
 - Avg. fuel burn per nautical mile
 - Avg. fuel burn per change in flight level
 - Better suited for assessing changes in cruise (e.g. RVSM)

- Allows those States without modelling and/or measurement capabilities to estimate fuel savings from operational improvements
- Consistent with CAEP-approved GHG models
- Consistent with Global Air Navigation Plan
- Easy-to-use / minimal data requirements
- Better than the Rules of Thumb

- The tool can estimate:
 - Effects of shortening / eliminating level segments on departure and approach
 - Effects of shorter routes (either in time or distance)
 - Effects of cruising at different altitudes
 - Effects of reduced taxi times

- **The tool does not:**
 - Replace detailed modelling or measurement of fuel consumption
 - Estimate fuel consumption from airborne holding
 - Compute other elements than fuel consumption / CO₂ emissions

- **AEDT** (CAEP-approved GHG model) used to pre-compute
 - Level, (steady state) climb, and (steady state) descent fuel consumption
 - By aircraft category
 - In 1,000 foot intervals
- **Result:** Robust database

- Fleet mix defined for baseline and post-implementation scenario
 - Aircraft category
 - Aircraft remaining trip distance (optional parameter that will increase accuracy for departures)
- User selects “elements” to define the baseline and “new” procedure
- Tool estimates the change in total fuel consumption between the 2 scenarios

Objective

Operational measures are one of the instruments available to States to improve fuel efficiency and reduce CO₂ emissions. The ICAO Fuel Savings Estimation Tool (IFSET) has been developed by the Secretariat with support from States and international organizations to assist the States to estimate fuel savings in a manner consistent with the models approved by CAEP and aligned with the Global Air Navigation Plan.

The ICAO Fuel Savings Estimation Tool (IFSET) is not intended to replace the use of detailed measurement or modelling of fuel savings, where those capabilities exist. Rather, it is provided to assist those States without such facilities to estimate the benefits from operational improvements in a harmonized way.

New Scenario

Saved Scenario

Step 1 - Define New Scenario

Scenario Name

| ID | Aircraft | Base Flights | New Flights | Continuing Old Flights | Remaining Trip (nm) |
|----|--------------------|--------------|-------------|------------------------|---------------------|
| 1 | Single Aisle Jet ▼ | 1000 | 1000 | 0 | 1160 |
| 2 | Turboprop ▼ | 500 | 500 | 0 | 740 |

[Back](#) [Aircraft Category Map](#) [Add](#) [Delete](#) [Save](#) [Next Step](#)

Save any change on the page by clicking "Save" before clicking "Next Step".

Step 2 - Saved Old/New Procedure Definition

Scenario Name:

Old Procedure Definition

| ID | Action | From Alt (ft) | To Alt (ft) | Distance (nm) | Time (sec) |
|----|--------|---------------|-------------|---------------|------------|
| 1 | Taxi | | | | 1200 |
| 2 | Climb | 3000 | 20000 | 37 | |
| 3 | Level | 20000 | 20000 | 20 | |
| 4 | Climb | 20000 | 25000 | 20 | |

New Procedure Definition

| ID | Action | From Alt (ft) | To Alt (ft) | Distance (nm) | Time (sec) |
|----|--------|---------------|-------------|---------------|------------|
| 1 | Taxi | | | | 1000 |
| 2 | Climb | 3000 | 25000 | 57 | |
| 3 | Level | 25000 | 25000 | 20 | |

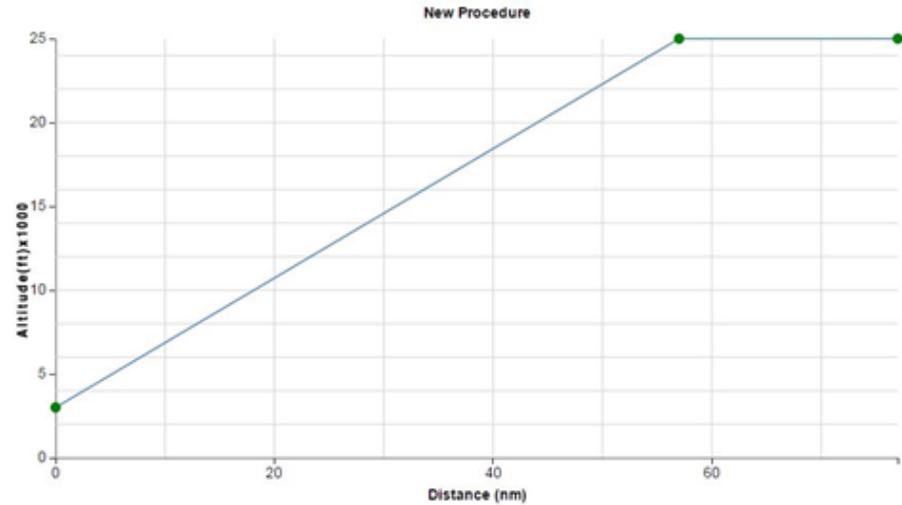

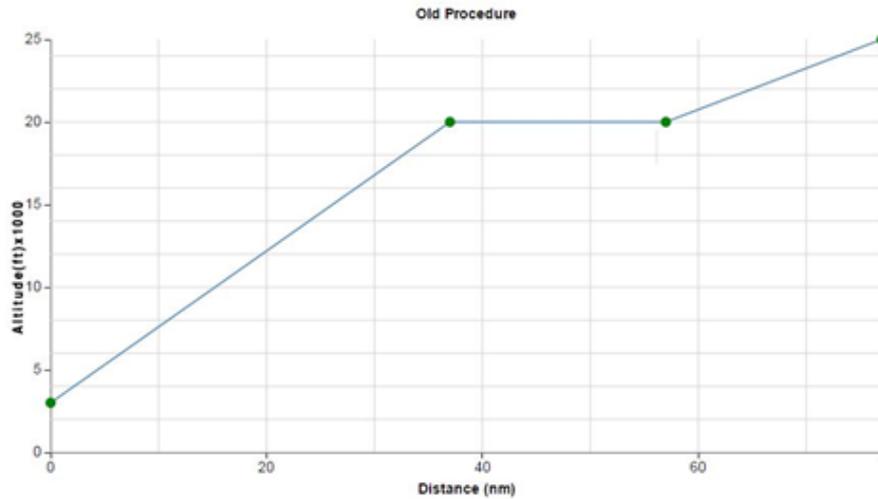

Step 3 - Estimated Fuel Changes Report

Scenario Name:

| Distance (nm) | Altitude (ft) |
|---------------|---------------|
| 0 | 3000 |
| 37 | 20000 |
| 57 | 20000 |
| 77 | 25000 |

| Distance (nm) | Altitude (ft) |
|---------------|---------------|
| 0 | 3000 |
| 57 | 25000 |
| 77 | 25000 |

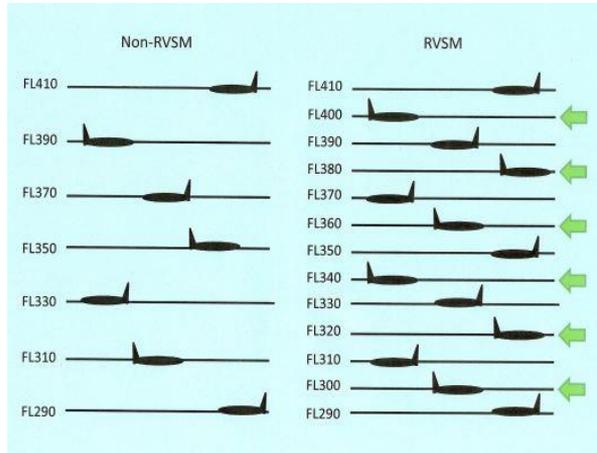

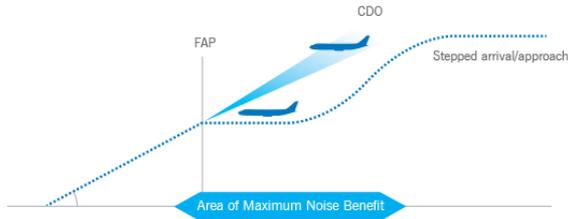

Estimated Fuel Changes Report

| Scenario Name | Old Fuel Consumption (KG) | New Fuel Consumption (KG) | Savings (KG) | Savings (%) |
|---------------|---------------------------|---------------------------|--------------|-------------|
| Example | 1337600 | 1283000 | -54500 | -4.10 |

Estimated Detailed Fuel Changes Report

| Old Climb Fuel (KG) | New Climb Fuel (KG) | Climb Savings (KG) |
|-----------------------|-----------------------|----------------------|
| 923000 | 921000 | -2100 |
| Old Descent Fuel (KG) | New Descent Fuel (KG) | Descent Savings (KG) |
| 0 | 0 | 0 |
| Old Level Fuel (KG) | New Level Fuel (KG) | Level Savings (KG) |
| 155800 | 146400 | -9400 |
| Old Taxi Fuel (KG) | New Taxi Fuel (KG) | Taxi Savings (KG) |
| 258800 | 215600 | -43100 |

Operational Measure Implementation (planned or post)

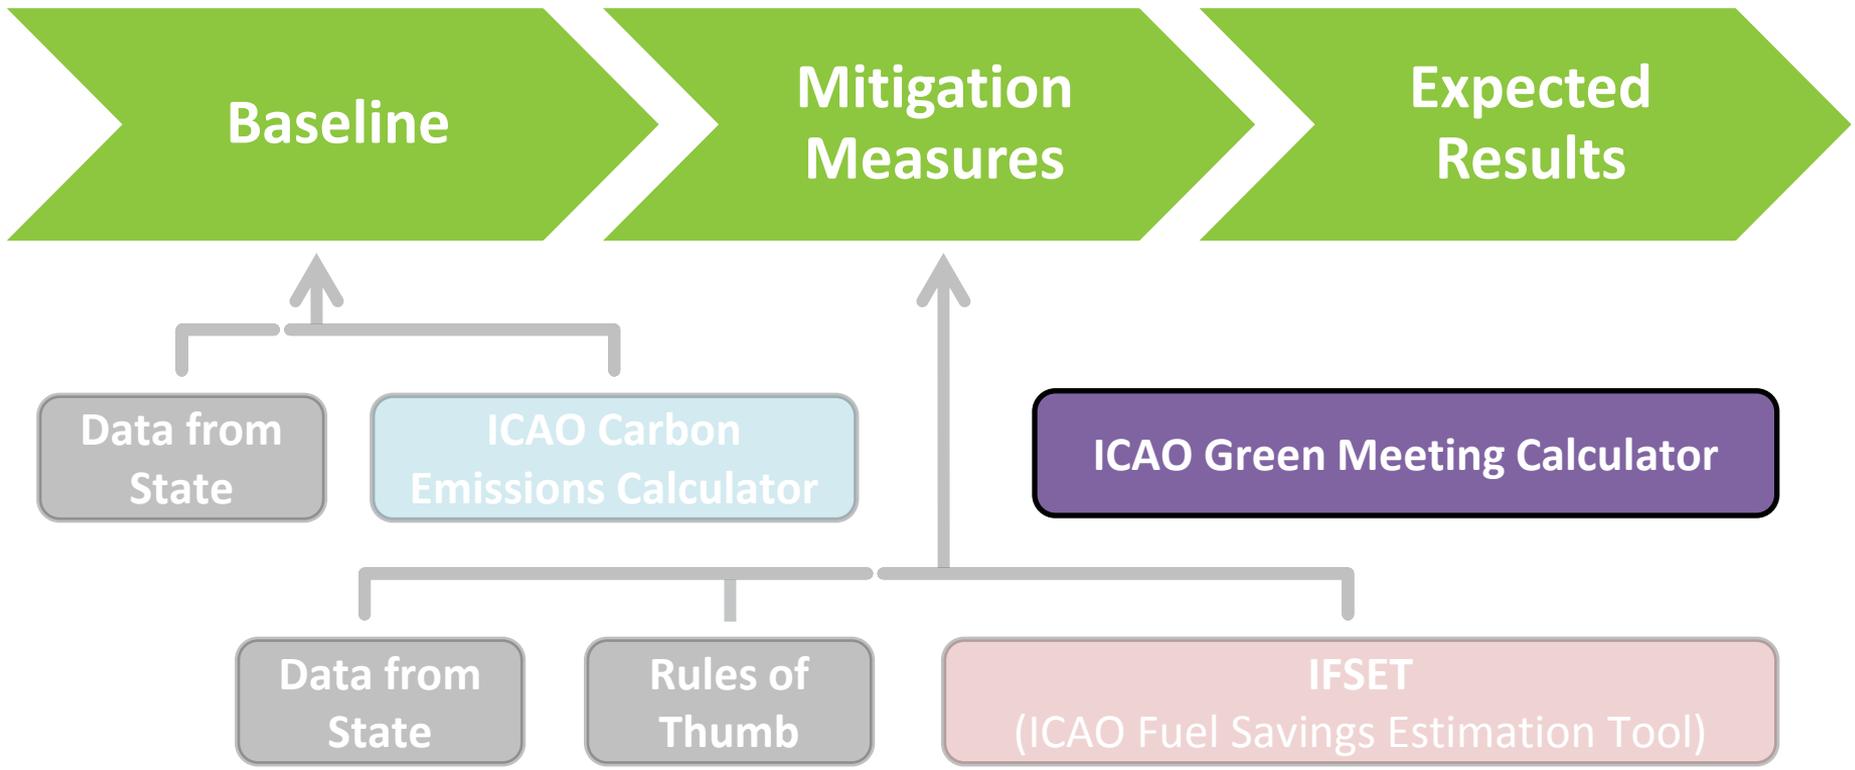

+

Need to quantify change in fuel consumption, but don't have the tools?

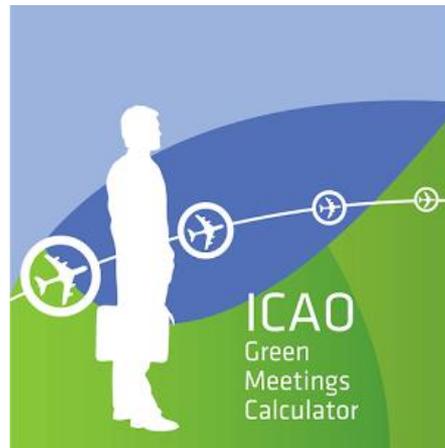

=

USE IFSET

Planning Meeting Locations: ICAO Green Meetings Calculator

- Developed in response to request from UN Travel Offices
- Supports decision-making by selecting meeting location with minimum CO₂ footprint from air travel

All of ICAO's environmental tools are available free of charge from:

<http://www.icao.int/env>

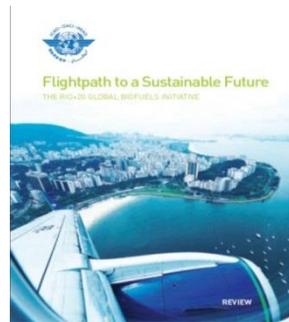

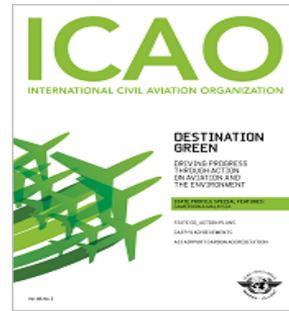

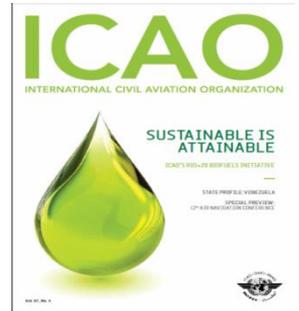

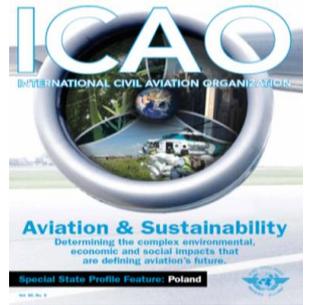

**The special interface to the ICAO Carbon Emissions Calculator is available through the APER portal.*
