SAFETY

# RASG-PA Safety Management Process

ICAO

SAFETY

# RASG-PA uses different types of safety data/information

**REACTIVE:** safety analysis based upon past occurrences (accidents and incidents) in the Pan American Region

**PROACTIVE:** includes analysis of States' existing conditions (ICAO SARPs implementation, traffic variations) and service providers (IATA Operational Safety Audits, ramp inspections)

**PREDICTIVE:** based upon analysis of Flight Operations Quality Assurance (FOQA) de-identified data, oriented towards identifying potential future hazards for initiating corresponding mitigation actions

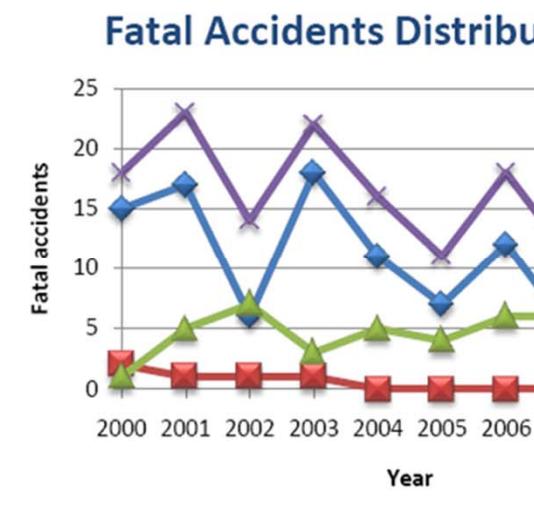

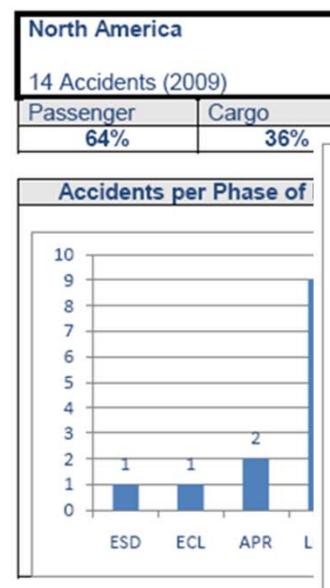

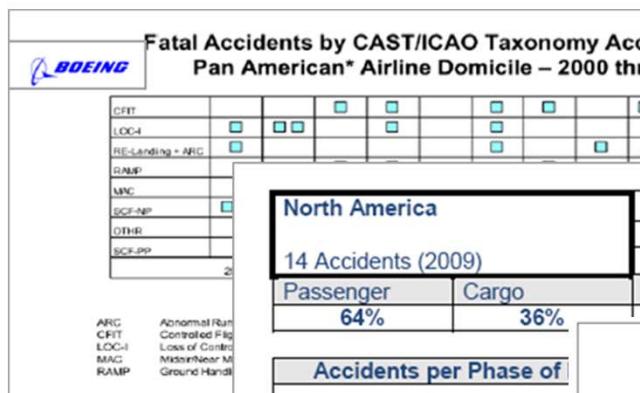

ICAO

SAFETY

# RASG-PA produces safety intelligence from different sources

# RASG-PA publishes Annual Safety Reports

## Measuring results

# RASG-PA develops Safety Enhancement Initiatives for:

**Runway Excursion (RE)**

**Controlled Flight Into Terrain (CFIT)**

**Loss of Control-Inflight (LOC-I)**

**Mid-Air Collision (MAC)**

**...and Detailed Implementation Plans (DIPs)**

# RASG-PA Risk Analysis

- RASG-PA Goal: 50% fatality risk reduction (2010 – 2020)
- Fatality risk: full loss passenger load equivalent per million departures
- Baseline: 5 year average fatality risk in 2010 = 0.6
- 2020 Goal = 0.3
- Calculated risk reduction due to SEIs implemented in the period 2009-2013 = 25%
- Calculated Risk through 2014 = 0.39, actual = 0.37
