

# Regional Air-Ground Data-Link Implementation

*Mr. Julio Siu, ICAO NACC Deputy Director*  
*Mr. Onofrio Smarrelli, ICAO SAM CNS Regional Officer*  
ICAO NACC and SAM Offices

**NAM/ CAR/ SAM ATS Datalink Implementation Workshop**

(Philisburg, Sint Maarten, 18-21 April 2016)

## CONTENTS

- Air Navigation Plan In The CAR/SAM Regions - eANP (Doc 8733) (Air-Ground Data-Link Consideration)
  
- Performance Based Implementation Plan (Air-Ground Data-Link Consideration)
  - NAM-CAR Regions
  - SAM Region
  
- GREPECAS Organization
  
- Air Ground Data Link Implementation
  - NAM - CAR Regions
  - SAM Region

## **AIR NAVIGATION PLAN IN THE CAR/SAM REGIONS- - eANP (Doc 8733) (Air-Ground Data-Link Consideration)**

- Air navigation plans exposed in detail the facilities, services and procedures required for international air navigation within a specific area.
- These plans contain recommendations that Governments can follow when programming the provision of facilities and air navigation services, with the assurance that the facilities and services provided in accordance with the plan form of the other States an integral system appropriate for the foreseeable future.
- Each Contracting State is responsible for the provision of facilities and services in its territory, in accordance with article 28 of the Convention. The Council has recommended that these facilities and services include those specified in air navigation plans.
- On June 18, 2014, ICAO Council decided that Air Navigation Plan (ANP) will be published in three volumes replacing in this way regional air navigation plans approved by the Council on 26 February 1997 formed a basic ANP and a document on facilities and services (FASID) in two volumes.

## AIR NAVIGATION PLAN IN THE CAR/SAM REGIONS- - eANP (Doc 8733) (Air-Ground Data-Link Consideration)

Volume I contains **the stable elements of the Plan**, whose amendment requires the approval of the **Council**, referred to a:

- ✓ the assignment of responsibilities;
- ✓ subject to a regional agreement mandatory requirements;
- ✓ and/or additional requirements specific to the region and are not covered by the SARP.

Partial list of these elements:

- ✓ (Tables and charts) boundaries of flight information regions (FIR);
- ✓ Search and rescue (SRR) regions (tables and charts) boundaries;
- ✓ (VAAC) volcanic ash advisories centers;
- ✓ Warnings of tropical cyclones (CAGR) centers; Volcano observatories (VO);

## AIR NAVIGATION PLAN IN THE CAR/SAM REGIONS- - eANP (Doc 8733) (Air-Ground Data-Link Consideration)

Volume II contains the **dynamic elements** of the plan, whose amendment **does not require the approval of the Council** (the approval is for regional agreement of the relevant **PIRG**), a:

- ✓ referred to the assignment of responsibilities;
- ✓ subject to a regional agreement mandatory requirements; and/or
- ✓ additional requirements specific to the region and are not covered by the SARP.

Partial list of these elements:

- ✓ principal flows of air traffic service (ATS) routes ;
- ✓ Meteorological Watch Office (MWO);
- ✓ codes of the Secondary Surveillance Radar (SSR),
- ✓ five letters Name codes
- ✓ VOLMET broadcasts.

## AIR NAVIGATION PLAN IN THE CAR/SAM REGIONS- - eANP (Doc 8733) (Air-Ground Data-Link Consideration)

**Volume III** will contain **dynamic/flexible elements** of the plan, providing guidance for the implementation of its modernization and air navigation systems planning, taking into account emerging programs such as the **ASBU** and **roadmaps** of associated technologies described in the GANP.

Volume III of the ANP will also contain **additional guidance material** appropriate, especially in relation to the **implementation**, to **complement** the material contained in **volumes I and II** of the ANP.

Volume III amendment would **not require** the approval of the **Council** but a regional agreement (**Secretariat and PIRG**)

# AIR NAVIGATION PLAN IN THE CAR/SAM REGIONS- - eANP (Doc 8733) (Air-Ground Data-Link Consideration)

## VOLUME I

### PART III – COMMUNICATION , NAVIGATION AND SURVEILLANCE (CNS)

#### 2 GENERAL REGIONAL REQUIREMENTS

##### *AIR-GROUND DATA LINK COMMUNICATIONS*

2.5 Air-ground data link communications should be implemented in such a way that they are regionally and globally harmonized and make efficient use of available communication means and ensure optimum economy in frequency spectrum use and system automation

## VOLUME II

### PART III – COMMUNICATION , NAVIGATION AND SURVEILLANCE (CNS)

#### 2 GENERAL REGIONAL REQUIREMENTS

##### *AIR-GROUND DATA LINK COMMUNICATIONS*

2.28 A Strategy for the harmonized implementation of the data link communications in the CAR/SAM Regions should be developed based on the Global Operational Data Link Document (GOLD) adopted by ICAO Regions and the Aviation System Block Upgrade (ASBU) methodology.

# AIR NAVIGATION PLAN IN THE CAR/SAM REGIONS- - eANP (Doc 8733) (Air-Ground Data-Link Consideration)

## PART III COMMUNICATION , NAVIGATION AND SURVEILLANCE (CNS)

### 2 GENERAL REGIONAL REQUIREMENTS

#### *AIR-GROUND DATA LINK COMMUNICATIONS*

2.29 Where applicable, controller-pilot data link communications (CPDLC), based on ATN VDL data link Mode 2 (VDL2) and/or FANS-1/A, should be implemented for air-ground data link communications.

2.30 Partial or divergent aircraft data link evolutions that result in excluding messages from aircraft systems should not be pursued. Interim steps or phases toward full implementation of the common technical definition in ground systems should only be pursued on a regional basis, after coordination between all States concerned.

2.31 Harmonization of operational procedures for implementation of the above packages is essential. States, Planning and Implementation Regional Groups (PIRGs) and air navigation services providers should adopt common procedures to support seamless ATS provision across FIR boundaries, rather than each State or Region developing and promulgating unique procedures for common functions.

# NAM/CAR REGIONAL PERFORMANCE-BASED AIR NAVIGATION IMPLEMENTATION PLAN (RPBANIP)

Harmonized implementation of Air Navigation Services and Systems under a Performance Based Approach.

The States, Air Navigation Implementation Working Group (ANI/WG) and other regional implementation groups follow-up this Plan, and formulate detailed Action Plans

ATN ground-ground applications are included under the Regional Performance Objective (RPO) No. 6 Optimization and Modernization of Communication Infrastructure and to support other operational RPOs such as RPO 4. Improvements to Situational Awareness and RPO No. 7 Implementation of AIM.

Version 3.1 of the RPBANIP is ASBU compliant and includes new ICAO ANRFs for monitoring and reporting

<http://www.icao.int/NACC/Pages/namcar-RPBANIP.aspx>

# NAM/CAR REGIONAL PERFORMANCE-BASED AIR NAVIGATION IMPLEMENTATION PLAN (RPBANIP)

## (RPO) No. 6 Optimization and Modernization of Communication Infrastructure

6. OPTIMIZATION AND MODERNIZATION OF COMMUNICATION INFRASTRUCTURE				
Benefits				
Efficiency	<ul style="list-style-type: none"> <li>Improved ATS coordination</li> <li>Increased communications availability</li> <li>Communication misunderstandings avoided</li> <li>Facilitated utilization of advanced technologies</li> </ul>			
Continuity	<ul style="list-style-type: none"> <li>Improved airspace interoperability and seamlessness</li> <li>Improved provision of air traffic control services to all aircraft operations</li> </ul>			
Safety	<ul style="list-style-type: none"> <li>Improved airspace and aerodrome safety</li> </ul>			
Strategy				
ATM Component	TASK DESCRIPTION	START-END	RESPONSIBLE	STATUS
AO, TS, CM, AUO AOM, SDM	a) Review the performance status of current AFS services and identify deficiencies or improvements (AFTN, oral ATS services, A/G communications)	2013-2015	States, Territories	Valid
	b) Implement communication service improvements as required to support current and planned Air Navigation applications, including Required Communication Performance (RCPs).	2014-2018	States, Territories	Valid
	c) Develop regional ATN planning documents	2013-2015	GREPECAS	Valid
	d) Coordinate and test ATN G-G application implementation aspects (AMHS, AIDC, etc.)	2013-2018	States, Territories	Valid
	e) Conduct planning, trial and implementation activities for A-G data applications (DCL, D-ATIS, etc.)	2014-2018	States, Territories	Valid
	f) Carry out technical review of regional telecommunication networks for ATN implementation	2013-2015	States, Territories	Valid
	g) Implement available technologies in order to facilitate ground and airborne applications (CPDLC, ADS-C, ADS-B)	2013-2018	States, Territories	Valid
	h) Implement the necessary communications network for ACDM	2014-2018	States, Territories	Valid
	i) Support ICAO position during the ITU WRC and ensure regional coordination for the protection of the aviation spectrum	2013-2018	States, Territories	Valid
	j) Ensure participation of civil aviation experts in State delegations to ITU WRC meetings	2013-2018	States, Territories	Valid
	k) Disseminate ICAO policy statements on aeronautical radio frequency spectrum requirements	2013-2018	States, Territories	Valid

# NAM/CAR Regional Performance Based Air Navigation Implementation Plan (RPBANIP)

## B0-40 TBO

### Improved Safety and Efficiency through the initial application of En-Route Data Link

To implement an initial set of data link applications for surveillance and communications in ATC, supporting flexible routing, reduced separation and improved safety.

Linkage with B0/FICE

Requires good synchronization of airborne and ground deployment to generate significant benefits, in particular to those equipped. Benefits increase with the proportion of equipped aircraft.

For ground systems, the necessary technology includes the ability to manage ADS-C contract, process and display the ADS-C position messages. CPDLC messages need to be processed and displayed to the relevant ATC unit. Enhanced surveillance through multi-sensor data fusion facilitates transition to/from radar environment.

Global readiness checklist		Status (ready now or estimated date)
	Standards readiness	✓
	Avionics availability	✓
	Ground systems availability	✓
	Procedures available	✓

<b>Applicable</b>	N	Y	Y	Y	Y
ASBU B0-TBO: Implementation Progress					
Elements			Implementation Status (Ground and Air)		
1. ADS-C over oceanic and remote areas			June 2018 Service provider		
2. Continental CPDLC			June 2018 Service provider		
ASBU B0-40: Implementation Roadblocks/Issues					
Elements	Implementation Area				
	Ground System Implementation	Avionics Implementation	Procedures Availability	Operational Approvals	
1. ADS-C over oceanic and remote areas	NIL	Implementation of ADS general aviation pending	Implementation of GOLD procedures pending	Lack of duly trained inspectors for approval of operations	
2. Continental CPDLC	NIL	Implementation of CPDLC general aviation pending	Implementation of GOLD procedures pending	Lack of duly trained inspectors for approval of operations	
ASBU B0-TBO: Performance Monitoring and Measurement (Implementation)					
Elements		Performance Indicators/Supporting Metrics			
1. ADS-C over oceanic and remote areas		Indicators: Percentage of FIRs with ADS C implemented Supporting metric: Number of ADS C approved procedures over oceanic and remote areas			
2. Continental CPDLC		Indicators: Percentage of CPDLC implemented at oceanic and remote area FIRs Supporting metric: Number of CPDLC approved procedures over oceanic and remote areas			
ASBU B0-TBO Performance Monitoring and Measurement (Benefits)					
Key Performance Areas			Benefits		
Access & Equity			NA		
Capacity			A better localization of traffic and reduced separation allow increased capacity. Reduced communication workload and better organization of controller tasks allowing increasing sector capacity.		
Efficiency			Routes/tracks and flights can be separated by reduced minima, allowing to apply flexible routings and vertical profiles closer to the user-preferred ones		
Environment			Reduced emissions as a result of reduced fuel burn		
Safety			ADS-C based safety nets supports cleared level adherence monitoring, route adherence monitoring, danger area infringement warning and improved search and rescue. Reduced occurrences of misunderstandings; solution to stuck microphone situations.		

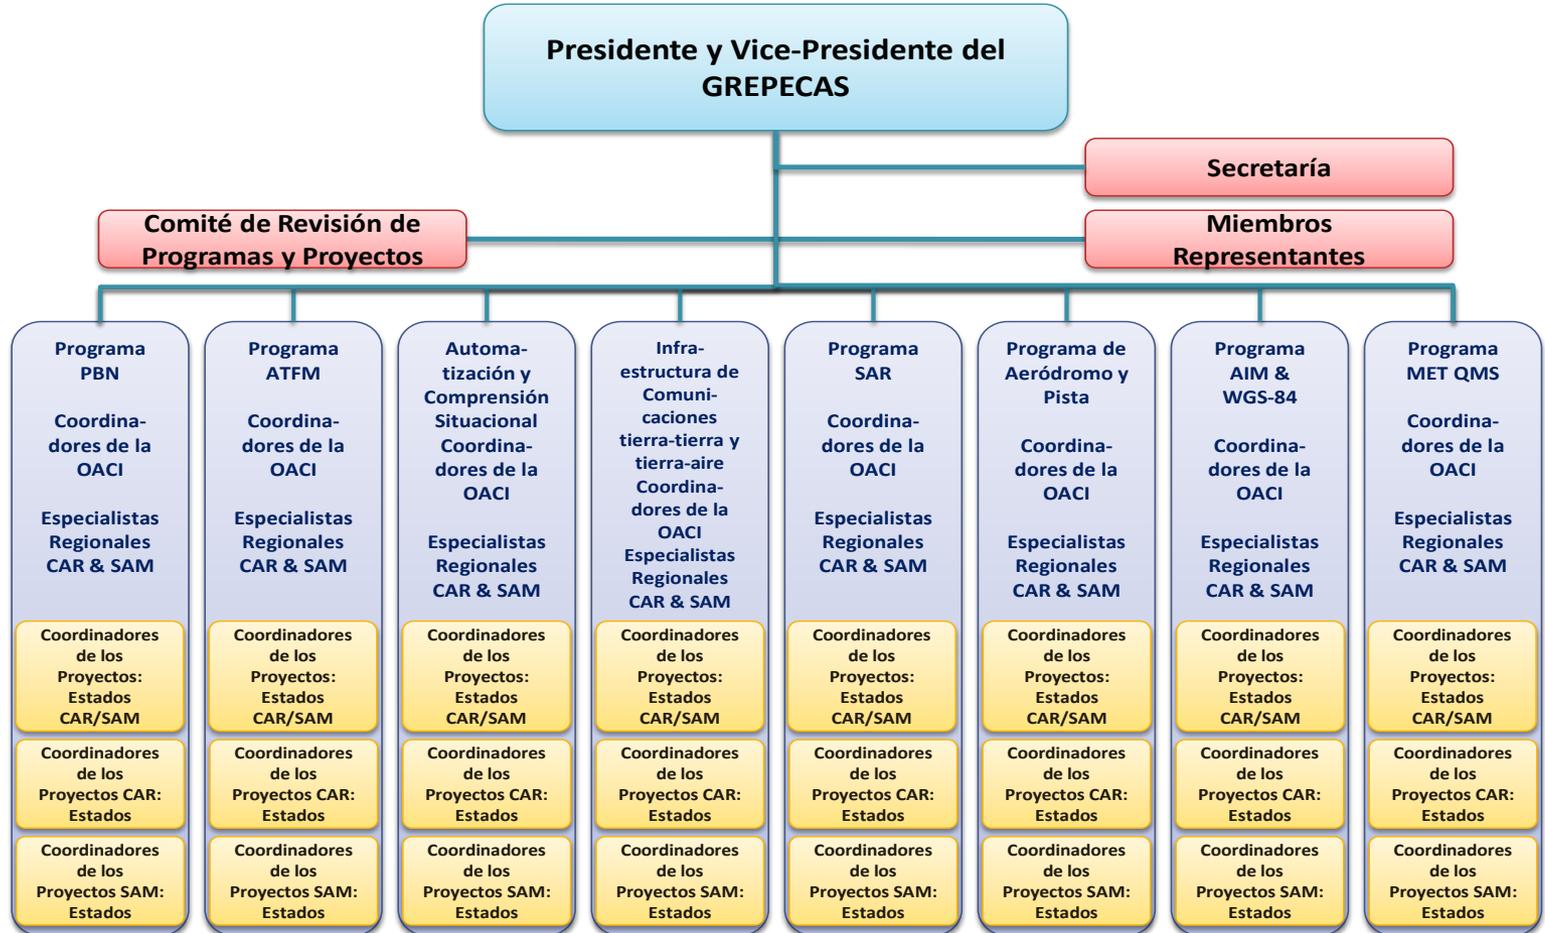

ADOPTED BY GREPECAS 13 Meeting

## NAM – CAR AIR GROUND DATA LINK IMPLEMENTATION

### CPDLC/ADS-C Regional Implementation

#### Advantages of Communications by data links

#### Identification of benefits

- ✓ Safety improvements by reducing reception of erroneous message
- ✓ Reduction of congestion of voice communications
- ✓ Reduction of radiotelephony work load for the pilot and controller
- ✓ More availability of voice communications
- ✓ Reduction of delayed transfer of communications
- ✓ Reduction of retransmissions generated by misunderstood communications
- ✓ Less stress for the controller
- ✓ Reduction on the required time for controller communication

# NAM – CAR AIR GROUND DATA LINK IMPLEMENTATION

## CPDLC/ADS-C Regional Implementation

Regional Agreement for remote and oceanic air spaces

CPDLC Support from RLA/09/801 TEAM SMEs

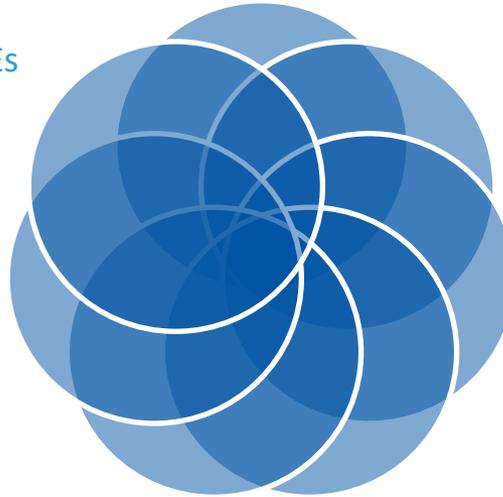

Cost-Benefit Analysis - Greater position ADS-C/CPDLC messages reports exchange

Regional Implementation: Central American FIR, Curaçao FIR, Mazatlan FIR and PIARCO FIR

HF Communication as an alternate/back-up mean

ATC System review and functional interconnection

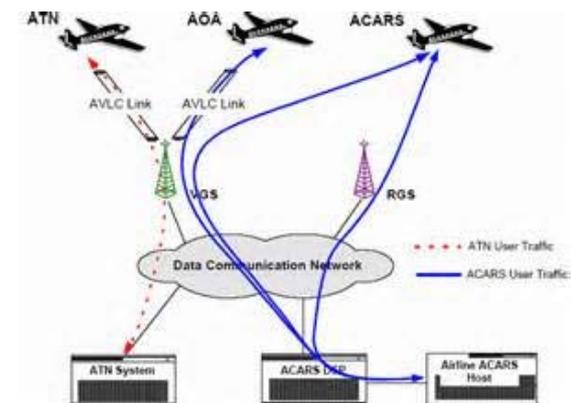

Global Operational Data Link Document (GOLD) document adoption for the NAM/CAR regions

# NAM – CAR AIR GROUND DATA LINK IMPLEMENTATION

## Regional Implementation

- COCESNA – current activities on CPDLC/ADS-C in the Pacific sector of the Central American FIR by CENAMER and the tests carried out since the second semester of 2014
- Trinidad and Tobago –implementation of ADS-C/ CPDLC in oceanic sector of PIARCO FIR by end of 2016
- Curacao and Mexico - study of ADS-C implementation at the northeast of the Curacao FIR and in Mazatlán FIR
- Other A-G Datalinks services ( like Departure clearance) implemented at TMA/APP

## **NAM – CAR AIR GROUND DATA LINK IMPLEMENTATION**

### **CPDLC/ADS-C Regional Implementation**

#### **Recent regional guidance developed by ANI/WG:**

- Considerations for the implementation of Controller-Pilot Data Link Communications (CPDLC)
- Action plan template for the CPDLC/ ADS-C implementation

# NAM – CAR AIR GROUND DATA LINK IMPLEMENTATION

## Considerations for CPDLC Implementation

Regulatory/Regional Coordination/Approval		Details and Examples	
<b>This category involves any coordination with State or Regional stakeholders such as regulatory authorities or PIRGs</b>	1.	Advise purpose and use within present ATM concept	The specific use of CPDLC for ATC functions would be described.
	2.	Establish and reference GOLD as the source guidance material	This would be necessary so that the State can be aware of the guidance for procedures and monitoring requirements.
	3.	Coordinate safety implementation activities	Incorporation of CPDLC would normally follow SMS practices for changes to operating procedures.
<b>Air Traffic Management Considerations</b>			
<b>This category involves activities to support overall ANSP system readiness</b>	1.	ATC and Technical Operations training	To be determined by implementer - Example, 2 hours (1 hour theory, 1 hour practice in simulator).
	2.	Decision on which messages to support	To be determined by implementer.
	3.	Pre-implementation live system testing	To be determined by implementer.
	4.	Performance monitoring	As per GOLD guidance
<b>State/Operator Awareness</b>			
<b>This category involves activities to coordinate and advertise the addition of CPDLC services, includes procedures, flight planning, etc</b>	1.	State Letter development and promulgation.	Advisory to States
	2.	State AIP <ul style="list-style-type: none"> <li>- Document amendment</li> <li>- Aeronautical Information Circular development and publication</li> </ul>	Should contain all procedures, including coverage area, implementation timelines, AFN logon address, etc

# NAM – CAR AIR GROUND DATA LINK IMPLEMENTATION

Action plan template for the CPDLC/ADS-C implementation

**SAM STATUS ADS C CPDLC IMPLEMENTATION IN OCEANIC AREA**

ACC/STATE	IMPLEMENTATION STATUS / TARGET DATE	REMARK
ATLANTICO (RECIFE)/BRAZIL	IMPLEMENTED/AUGUST 2009	FULL OPERATIONAL
BOGOTA/COLOMBIA	PLANNED /2018	
CAYENNE /FRENCH GUIANA	IMPLEMENTED MARCH 2011	FULL OPERATIONAL
COMODORO RIVADAVIA / ARGENTINA	INSTALLED/DECEMBER 2010	PRE OPERATIONAL PHASE THERE IS NO ESTABLISHED DATE FOR COMMENCEMENT OF OPERATIONAL TRIALS
EZEIZA/ARGENTINA	INSTALLED/DECEMBER 2010	PRE OPERATIONAL PHASE THERE IS NO ESTABLISHED DATE FOR COMMENCEMENT OF OPERATIONAL TRIALS
LIMA/PERU	PLANNED/2018	
MONTEVIDEO/URUGUAY	INSTALLED/DECEMBER 2014	PRE.OPERATIONAL
SANTIAGO OCEANIC/CHILE	IMPLEMENTED/	FULL OPERATIONAL

## SAM STATE CONSIDERATIONS FOR DATA LINK IMPLEMENTATION

- The establishment of an **ATM operational concept** in a State is the starting point for data link implementation. The States are **not isolated** and in the seamless airspace concept, regional and global initiatives (in that order) must be considered. (SAM PBIP) and the Fourth Edition of the Global Air Navigation Plan (GANP) (Doc 9750) should be taken into account from the beginning.
- The institutions related to air traffic management (CAA, ANSP) should develop an **evolutionary strategy** aimed at providing **benefits to the ATM community**, through an **orderly, safe, and cost-efficient implementation**. It should be noted that the evolutionary implementation of the concept is related to the **installed capacity on board aircraft**.
- The possibility of **implementing the air-ground architecture**, whereby VHF equipment may **belong** to the **CAA** or the **DSP service provider**. It also addresses the decision of **Brazil** of modernising the data link platform through the **concession of services**.
- Regarding technical aspects, the decision regarding the **flight level (FL)** to be covered throughout a State's territory is crucial, since it determines **the number of remote stations to be installed**. **Brazil** decided to have coverage in **FL 245**. also addresses the implementation of VHF equipment (ACARS, VDL Mode 2).

## SAM STATE CONSIDERATIONS FOR DATA LINK IMPLEMENTATION (CONT.)

- Studies to use **REDDIG II SAM Regional Network** as a partial ground network to transport the **air ground data link information to the central processor of SITA in Rio de Janeiro from the Santiago Oceanic ACC**. Santiago Oceanic ACC use REDDIG II to transport ADS C CPDLC to SITA processor in Rio since October 2015 (Under test monitoring performance)
- The main applications that should be considered by CAAs for continental area are **D-VOLMET, D-ATIS, and DCL**. Service implementation involves the **installation of servers** that may be **owned by a CAA, ANSP or DSP**.
- The decision to **implement servers** must take into account **economic, technical, and operational aspects**. It should be noted that as long as only **few airports have data link functionalities, local servers for D-ATIS and DCL could be used**. If the **number of airports is significant**, consideration should be given to the **implementation of central servers** to receive information from remote units and send it to remote stations through the central processor.
- Regarding D-VOLMET, it is felt advisable to install a **central data bank**, like the OPMET bank of Brazil, to receive information from airports and send it, upon request, to aircraft, through the central processor.
