NOTA DE ESTUDIO

NACC/WG/RAP/02 — NE/03

15/03/2023

**Segunda reunión de relatores del Grupo de Trabajo de Norteamérica, Centroamérica y Caribe
(NACC/WG/RAP/02)**

Oficina Regional NACC de la OACI, Ciudad de México, México, 07 a 10 de febrero de 2023

Cuestión 2 del

Orden del Día: Plan Mundial de Navegación Aérea (GANP), Séptima Edición

MEJORAS POR BLOQUES DEL SISTEMA DE AVIACIÓN (ASBU)

(Presentada por la Secretaría)

RESUMEN EJECUTIVO

Esta nota de estudio proporciona información sobre los elementos de las Mejoras por Bloques del Sistema de Aviación (ASBU) y sobre cómo pueden ayudar a definir las prioridades regionales CAR y los objetivos regionales para la Región CAR y su operatividad en Estados adyacentes.

Acción:	Todos los Grupos de Tarea del NACC/WG están invitados a analizar la información presentada en esta nota y actualizar sus planes de acción de acuerdo con el trabajo propuesto.
Objetivos Estratégicos:	<ul style="list-style-type: none">• Objetivo estratégico 1 – Seguridad Operacional• Objetivo estratégico 2 – Capacidad y eficiencia de la navegación aérea• Objetivo estratégico 5 – Protección del medio ambiente
Referencias:	<ul style="list-style-type: none">• Resoluciones del 41º Período de Sesiones de la Asamblea de OACI: https://www.icao.int/Meetings/a41/Documents/Resolutions/10184_en.pdf• Plan Mundial de Navegación Aérea (GANP), Séptima Edición: https://www4.icao.int/ganpportal/ASBU

1. Introducción

1.1 Durante el 41º Período de Sesiones de la Asamblea de la OACI celebrado en octubre de 2022, se aprobó la El Plan mundial de navegación aérea (GANP), Séptima Edición y se reconoció la importancia del marco global y los planes regionales y nacionales para apoyar los objetivos estratégicos de la OACI.

1.2 El GANP es la herramienta para desarrollar y priorizar el trabajo técnico y operativo del programa de la OACI; es necesario que los Estados, las organizaciones internacionales, la industria y todas las partes interesadas utilicen el GANP para planificar e implementar actividades, establecer prioridades, metas e indicadores coherentes con los objetivos armonizados a nivel mundial, teniendo en cuenta las necesidades operativas.

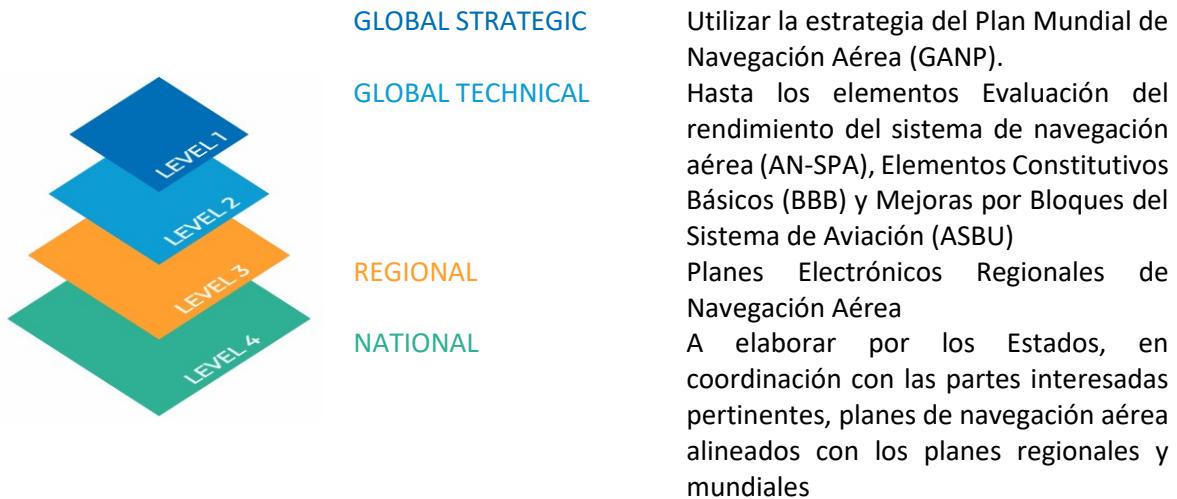

1.3 El GANP impulsa la evolución del sistema mundial de navegación aérea para satisfacer las expectativas cada vez mayores de la comunidad aeronáutica. El propósito del GANP es dar cabida

equitativamente a todas las operaciones de los usuarios del espacio aéreo de manera segura y rentable, al mismo tiempo que se reduce el impacto ambiental de la aviación. Con este fin, el GANP proporciona una serie de mejoras operativas para aumentar la capacidad, la eficiencia, la previsibilidad y la flexibilidad al tiempo que garantiza la interoperabilidad de los sistemas y la armonización de los procedimientos.

1.4 Los Estados deben desarrollar sus Planes Nacionales de Navegación Aérea (NANP) para su propia modernización de la navegación, para coordinar con la OACI y alinear sus planes para asegurar la armonización regional y la compatibilidad e interoperabilidad global.

2. Estrategia NACC de la OACI para desarrollar objetivos regionales y nacionales utilizando el GANP Séptima Edición

2.1 De acuerdo con reuniones NACC/WG anteriores, es necesario actualizar el estado de implementación de la navegación aérea regional y basarlo en los cuatro niveles del GANP. Para ello, es necesario considerar lo siguiente:

2.2 El nivel mundial estratégico proporciona direcciones estratégicas de alto nivel para que las/los responsables de la toma de decisiones impulsen la evolución del sistema mundial de navegación aérea hacia una visión común acordada.

2.3 La herramienta Evaluación del rendimiento del sistema de navegación aérea (AN-SPA) tiene como objetivo promover un enfoque basado en el rendimiento para una modernización rentable del sistema de navegación aérea. Esta herramienta guía a la comunidad de la aviación en la aplicación de un proceso de gestión del desempeño de seis pasos y en la selección de mejoras operativas relevantes dentro del marco ASBU.

2.4 El nivel técnico mundial apoya a las/los gerentes técnicas/os en la planificación de la implementación de servicios básicos y nuevas mejoras operativas de manera rentable y de acuerdo con las necesidades específicas, al tiempo que garantiza la interoperabilidad de los sistemas y la armonización de los procedimientos. Dos marcos técnicos globales:

- a) Elemento constitutivo básico (BBB): que describe las bases de un sistema sólido de navegación aérea mediante la definición de los servicios esenciales de navegación aérea que se proporcionarán a la aviación civil internacional; y
- b) una versión actualizada del marco de Mejoras por bloques del sistema de aviación (ASBU) para una implementación escalable, que brinda a la comunidad de la aviación los beneficios de desempeño esperados de la implementación de mejoras operacionales de navegación aérea específicas.

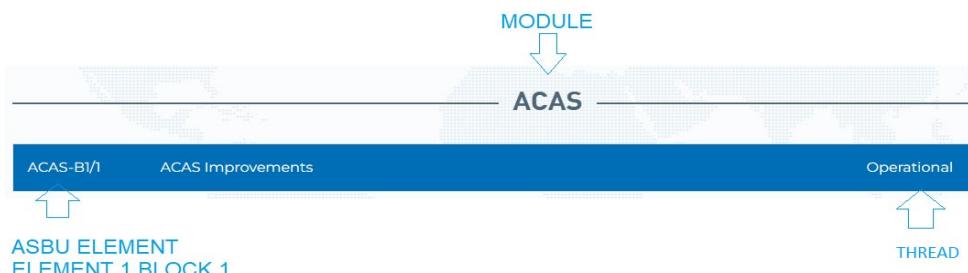

2.5 Plan Regional Electrónico de Navegación Aérea (eANP): Los ANP regionales representan el puente entre, por un lado, las disposiciones mundiales en las Normas y Métodos Recomendados (SARPS) de la OACI y el Plan Mundial de Navegación Aérea (GANP) y, por el otro lado, los planes nacionales de los Estados y su implementación actual. Los ANP se han desarrollado hasta ahora para establecer, en detalle, las instalaciones, servicios y procedimientos requeridos para la navegación aérea internacional dentro de una región o regiones específicas y contienen material de planificación y orientación.

3. Mejoras por bloque del sistema de aviación (ASBU)

3.1 La metodología ASBU del GANP de la OACI es un enfoque mundial programático y flexible que permite a todos los Estados miembros mejorar sus capacidades de navegación aérea en función de sus requisitos operacionales específicos.

3.2 El ASBU funciona de acuerdo con la siguiente estructura:

- a) Hilo conductor ASBU: tres categorías diferentes, operativa, de información y tecnología.
- b) Módulo ASBU: es el conjunto de elementos de un hilo conductor que, de acuerdo con la hoja de ruta de los habilitadores, estará disponible para su implementación dentro del plazo definido establecido por el Bloque ASBU.
- c) Bloque ASBU: esto implica que el elemento y todos los habilitadores asociados a él deben estar disponibles para su implementación en el año del bloque ASBU.
- d) Elemento ASBU: este módulo es el conjunto de elementos de un hilo conductor que, de acuerdo con la hoja de ruta de los habilitadores, estará disponible para su implementación dentro del plazo definido establecido por el Bloque ASBU.

<https://www4.icao.int/ganpportal/ASBU>

3.3 Los Elementos ASBU tienen diferentes niveles de madurez:

- a) Listo para implementación: este nivel de madurez se enfoca en el final del desarrollo del sistema y la capacidad operativa inicial a nivel mundial.
- b) Normalización: este nivel de madurez se centra en la definición de las disposiciones necesarias para la interoperabilidad del sistema y la armonización de los procedimientos.
- c) Validación: este nivel de madurez se centra en la investigación y validación industrial e incluye la validación de la prueba de concepto, la implementación y prueba de prototipos independientes, las pruebas y la creación de prototipos en un entorno representativo y la demostración de viabilidad de ingeniería completa en la aplicación del sistema real.
- d) Concepto: este nivel de madurez se centra en la investigación exploratoria e incluye la investigación científica, la investigación de los principios básicos observados e informados y la definición del concepto.

3.4 El **Apéndice A** contiene información de los diferentes elementos ASBU según su nivel de madurez.

3.5 Cada elemento ASBU contiene información sobre su descripción funcional, habilitadores, aplicabilidad de implementación y evaluación de impacto en el desempeño. Los Estados deben entender que los elementos ASBU se abordan para satisfacer una necesidad operacional o resolver una deficiencia, aumentar la eficiencia y la seguridad.

3.6 Es necesario trabajar haciendo una evaluación para encontrar el nivel de implementación de la Navegación Aérea “listo para la implementación” a través de los elementos ASBU. Ver más detalles en el **Apéndice B**.

4. Evaluación de los elementos ASBU

4.1 Es necesario que la región haga un análisis del estado de implementación de cada elemento ASBU, qué elementos se encuentran operando actualmente, con su nivel de implementación y la operatividad de cada uno de sus habilitadores. Este análisis debe hacerse para cada elemento ASBU.

4.2 Es necesario recopilar los datos y resultados del análisis para contribuir al análisis regional de la implantación de la navegación aérea. Los elementos ASBU junto con los elementos BBB proporcionarán los datos necesarios para definir el estado de la región en términos de navegación aérea.

4.3 Finalmente, con este resultado se identificarán las áreas débiles, los proyectos que se deben priorizar y la identificación de metas de corto, mediano y largo plazo.

5. Acciones sugeridas:

5.1 Se invita a la Reunión a:

- a) analizar la información proporcionada en esta nota de estudio;
 - b) cada Grupo de Tarea debe integrar la evaluación de los elementos ASBU de acuerdo con el hilo conductor ASBU; y
 - c) otra acción que corresponda.
-

NOPS (Network Operations)				
B0	B1	B2	B3	B4
NOPS-B0/4 Initial Airport/ATFM slots and A-CDM Network Interface Operational	NOPS-B1/4 Dynamic Traffic Complexity Management Operational	NOPS-B2/4 Multi ATFM slot swapping and Airspace Users priorities Operational	NOPS-B3/1 ATM Network Services in full TBO context Operational	
NOPS-B0/5 Dynamic ATFM slot allocation Operational	NOPS-B1/5 Full integration of airspace management with air traffic flow management Operational	NOPS-B2/5 Further airport integration within Network Operation Planning Operational	NOPS-B3/2 Cooperative Network Operations Planning Operational	
	NOPS-B1/6 Initial Dynamic Airspace configurations Operational	NOPS-B2/6 ATFM adapted for cross-border Free Route Airspace (FRA) Operational	NOPS-B3/3 Innovative airspace architecture Operational	
	NOPS-B1/7 Enhanced ATFM slot swapping Operational	NOPS-B2/7 UTM Network operations Operational		
	NOPS-B1/8 Extended Arrival Management supported by the ATM Network function Operational	NOPS-B2/8 High upper airspace network operations Operational		
	NOPS-B1/9 Target Times for ATFM purposes Operational			
	NOPS-B1/10 Collaborative Trajectory Options Program (CTOP) Operational			
OPFL (Improved access to optimum flight levels in oceanic and remote airspace)				
B0	B1	B2	B3	B4
OPFL-B0/1 In Trail Procedure (ITP) Operational	OPFL-B1/1 Climb and Descend Procedure (CDP) Operational	OPFL-B2/1 Separation minima using ATS surveillance systems where VHF voice communications are not available Operational	OPFL-B3/1 Helicopter RNP 0.3 Terminal and En-Route Operations Operational	
			OPFL-B3/2 Expansion of upper limit of the Reduced Vertical Separation Minima (RVSM) band of flight levels Operational	
			OPFL-B3/3 Target-to-target separations using Space-based ADS-B data Operational	

ASBU ELEMENTS				
B0	B1	B2	B3	B4
RSEQ-B0/1 Arrival Management Operational	RSEQ-B1/1 Extended arrival metering Operational	RSEQ-B2/1 Integration of arrival and departure management Operational		RSEQ-B4/1 Departure management in terminal airspace from multiple airports Operational
RSEQ-B0/2 Departure Management Operational			RSEQ-B3/2 Arrival management in terminal airspace with multiple airports Operational	RSEQ-B4/2 Extended arrival management supporting overlapping operations into multiple airports Operational
RSEQ-B0/3 Point merge Operational			RSEQ-B3/3 Increased utilization of runway capacity by improved real-time runway scheduling Operational	
			RSEQ-B3/4 Improved operator fleet management in runway sequencing Operational	
SNET (Ground-based Safety Nets)				
B0	B1	B2	B3	B4
SNET-B0/1 Short Term Conflict Alert (STCA) Operational	SNET-B1/1 Enhanced STCA with aircraft parameters Operational			
SNET-B0/2 Minimum Safe Altitude Warning (MSAW) Operational	SNET-B1/2 Enhanced STCA in complex TMAs Operational			
SNET-B0/3 Area Proximity Warning (APW) Operational				
SNET-B0/4 Approach Path Monitoring (APM) Operational				
SURF (Surface operations)				
B0	B1	B2	B3	B4
SURF-B0/1 Basic ATCO tools to manage traffic during ground operations Operational	SURF-B1/1 Advanced features using visual aids to support traffic management during ground operations Operational	URF-B2/1 Enhanced surface guidance for pilots and vehicle drivers Operational	SURF-B3/1 Optimization of surface traffic management in complex situations Operational	
SURF-B0/2 Comprehensive situational awareness of surface operations Operational	SURF-B1/2 Comprehensive pilot situational awareness on the airport surface Operational	URF-B2/2 Comprehensive vehicle driver situational awareness on the airport surface Operational		
SURF-B0/3 Initial ATCO alerting service for surface operations Operational	SURF-B1/3 Enhanced ATCO alerting service for surface operations Operational	URF-B2/3 Conflict alerting for pilots for runway operations Operational		
	SURF-B1/4 Routing service to support ATCO surface operations management Operational			
	SURF-B1/5 Enhanced vision systems for taxi operations Operational

ELEMENTS READY FOR IMPLEMENTATION

COMI-B0/5 Satellite communications (SATCOM) Class C Data Technology		
COMI-B0/6 High Frequency Data Link (HFDL) Technology		
COMI-B0/7 ATS Message Handling System (AMHS) Technology		

COMS (ATS Communication service)

B0	B1	B2
COMS-B0/1 CPDLC (FANS 1/A & ATN B1) for domestic and procedural airspace Technology	COMS-B1/1 PBCS approved CPDLC (FANS 1/A+) for domestic and procedural airspace Technology	
COMS-B0/2 ADS-C (FANS 1/A) for procedural airspace Technology	COMS-B1/2 PBCS approved ADS-C (FANS 1/A+) for procedural airspace Technology	
	COMS-B1/3 SATVOICE (incl. routine communications) for procedural airspace Technology	

CSEP (Cooperative Separation)

B0	B1	B2
	CSEP-B1/1 Basic airborne situational awareness during flight operations (AIRB) Operational	
	CSEP-B1/2 Visual Separation on Approach (VSA) Operational	

DAIM (Digital Aeronautical Information Management)

B0	B1	B2
	DAIM-B1/2 Provision of digital Aeronautical Information Publication (AIP) data sets Information	
	DAIM-B1/3 Provision of digital terrain data sets Information	
B0	B1	B2

ASBU ELEMENTS

ELEMENTS READY FOR IMPLEMENTATION

	DAIM-B1/4 Provision of digital obstacle data sets Information	
	DAIM-B1/5 Provision of digital aerodrome mapping data sets Information	
	DAIM-B1/6 Provision of digital instrument flight procedure data sets Information	
	DAIM-B1/7 NOTAM improvements Information	

DATS (Digital Aerodrome Air Traffic Services)

B0	B1	B2

FICE (Flight and Flow Information for a Collaborative Environment (FF-ICE))

B0	B1	B2
FICE-B0/1 Automated basic inter facility data exchange (AIDC) Information		

FRTO (Improved operations through enhanced en-route trajectories)

B0	B1	B2
FRTO-B0/1 Direct routing (DCT) Operational		
FRTO-B0/2 Airspace planning and Flexible Use of Airspace (FUA) Operational		
B0	B1	B2
FRTO-B0/3 Pre-validated and coordinated ATS routes to support flight and flow Operational		
FRTO-B0/4 Basic conflict detection and conformance monitoring Operational		

GADS (Global Aeronautical Distress and Safety System (GADSS))

ASBU ELEMENTS

ELEMENTS READY FOR IMPLEMENTATION

B0	B1	B2
	GADS-B1/1 Aircraft Tracking Operational	GADS-B2/1 Location of an aircraft in Distress Operational
	GADS-B1/2 Operational Control Directory Operational	GADS-B2/2 Distress tracking information management Operational
		GADS-B2/4 Flight Data Recovery Operational

NAVS (Navigation systems)

B0	B1	B2
NAVS-B0/1 Ground Based Augmentation Systems (GBAS) Technology		
NAVS-B0/2 Satellite Based Augmentation Systems (SBAS) Technology		
NAVS-B0/3 Aircraft Based Augmentation Systems (ABAS) Technology		
NAVS-B0/4 Navigation Minimal Operating Networks (Nav. MON) Technology		

NOPS (Network Operations)

B0	B1	B2
NOPS-B0/1 Initial integration of collaborative airspace management with air traffic flow management Operational		
NOPS-B0/2 Collaborative Network Flight Updates Operational		
NOPS-B0/3 Network Operation Planning basic features Operational		
NOPS-B0/4 Initial Airport/ATFM slots and A-CDM Network Interface Operational		
NOPS-B0/5 Dynamic ATFM slot allocation Operational		

OPFL (Improved access to optimum flight levels in oceanic and remote airspace)

B0	B1	B2

ASBU ELEMENTS

ELEMENTS READY FOR IMPLEMENTATION

OPFL-B0/1 In Trail Procedure (ITP) Operational		Separation minima using ATS surveillance systems where VHF voice communications are not available Operational
--	--	--

RSEQ (Improved traffic flow through runway sequencing)

B0	B1	B2
RSEQ-B0/1 Arrival Management Operational		
RSEQ-B0/2 Departure Management Operational		
RSEQ-B0/3 Point merge Operational		

SNET (Ground-based Safety Nets)

B0	B1	B2
SNET-B0/1 Short Term Conflict Alert (STCA) Operational	SNET-B1/1 Enhanced STCA with aircraft parameters Operational	
SNET-B0/2 Minimum Safe Altitude Warning (MSAW) Operational	SNET-B1/2 Enhanced STCA in complex TMAs Operational	
SNET-B0/3 Area Proximity Warning (APW) Operational		
SNET-B0/4 Approach Path Monitoring (APM) Operational		

SURF (Surface operations)

B0	B1	B2
SURF-B0/1 Basic ATCO tools to manage traffic during ground operations Operational		
SURF-B0/2 Comprehensive situational awareness of surface operations Operational	SURF-B1/2 Comprehensive pilot situational awareness on the airport surface Operational	
B0	B1	B2

ASBU ELEMENTS

ELEMENTS READY FOR IMPLEMENTATION

SURF-B0/3 Initial ATCO alerting service for surface operations Operational		
--	--	--

SWIM (System Wide Information Management)

B0	B1	B2
		SWIM-B2/3 SWIM registry Information

TBO (Trajectory-based operations)

B0	B1	B2
TBO-B0/1 Introduction of time-based management within a flow centric approach. Operational		

WAKE (Wake Turbulence Separation)

B0	B1	B2
