

## NOTA DE ESTUDIO

### GRUPO DE EXPERTOS SOBRE MERCANCÍAS PELIGROSAS (DGP)

#### VIGESIMOCUARTA REUNIÓN

Montreal, 28 de octubre – 8 de noviembre de 2013

Cuestión 2 del orden del día: **Formulación de recomendaciones sobre las enmiendas de las *Instrucciones Técnicas para el transporte sin riesgos de mercancías peligrosas por vía aérea* (Doc 9284) que haya que incorporar en la edición de 2015-2016**

#### DISPOSICIONES PARA ONU 2983 – ÓXIDO DE ETILENO Y ÓXIDO DE PROPILENO EN MEZCLA

(Nota presentada por J. McLaughlin)

*Por falta de recursos, sólo se ha traducido el resumen*

#### RESUMEN

En esta nota de estudio se ofrece información actualizada sobre una cuestión que se planteó en la reunión de 2012 del Grupo de trabajo plenario del Grupo de expertos sobre mercancías peligrosas (DGP-WG/12, Montreal, 15 al 19 de octubre de 2012) en relación con una discrepancia entre los embalajes permitidos para ONU 2983 — **Óxido de etileno y óxido de propileno en mezcla** en las Instrucciones Técnicas (Instrucción de embalaje 361) y aquellos que se permiten en la Reglamentación Modelo de las Naciones Unidas (P001). El grupo de trabajo convino en remitir el asunto al Subcomité de expertos de las Naciones Unidas.

Se presentó una nota al 43º período de sesiones del Subcomité de las Naciones Unidas, pero no se consideró debido a limitaciones de tiempo. Se sugiere que las disposiciones de la Reglamentación Modelo de las Naciones Unidas son más apropiadas que las contenidas en las Instrucciones Técnicas, pero no se propone una enmienda en esta oportunidad en espera de las deliberaciones del Subcomité de las Naciones Unidas.

**Medidas recomendadas al DGP:** Se invita al DGP tomar nota del contenido de esta nota de estudio. Teniendo en cuenta la evaluación técnica presentada en UN/SCETDG/43/INF.28 en que se confirma la aceptación de los embalajes permitidos en la Instrucción de embalaje 361 y que la Instrucción de embalaje 361 actual es una instrucción de embalaje existente, en esta oportunidad no se propone una enmienda para armonizar las Instrucciones Técnicas con la última edición de la Reglamentación Modelo de las Naciones Unidas.

## 1. INTRODUCTION

1.1 During the 2012 Meeting of the Dangerous Goods Panel Working Group of the Whole (DGP-WG/12, Montreal, 15 to 19 October 2012), a paper was introduced identifying a discrepancy between the packaging assigned to UN 2983 within the Technical Instructions (Packing Instruction 361) and the UN Model Regulations (P200) (see paragraph 3.2.18.3 of the DGP-WG/12 Report (DGP/24-WP/2)). It was suggested that Packing Instruction 361 of the Technical Instructions be amended to harmonize with P200 of the UN Model Regulations. The working group agreed to refer the question to the UN Sub-Committee to consider if the assignment of P200 authorizing the use of pressure receptacles only was appropriate (see paragraph 3.2.18.6 of the DGP-WG/12 Report (DGP/24-WP/2)).

1.2 The expert from the United States submitted informal paper UN/SCETDG/43/INF.28 to the 43rd session of the UN Sub-Committee (reproduced in the appendix to this working paper). The informal paper was not considered by the sub-committee due to time constraints. However, a review of the Model Regulations packaging provisions for similarly classed substances, specifically a comparison to other flammable liquids assigned to P001 of the Model Regulations with similar properties (i.e. flammable liquids with toxic subsidiary risks and similar vapour pressures) indicates that P001, corresponding to Packing Instruction 361 of the Technical Instructions, may be the more appropriate packing instruction.

1.3 Although the informal paper was not discussed at the 43rd UN TDG session, it has been added as a working paper for the 44<sup>th</sup> session. Any additional information coming forward from the UN session will be brought to the attention of the DGP for consideration.

## APÉNDICE

### INFORMAL PAPER PRESENTED TO THE 43RD SESSION OF THE UN SUB-COMMITTEE OF EXPERTS ON THE TRANSPORT OF DANGEROUS GOODS

**UN/SCETDG/43/INF.28**

**Committee of Experts on the Transport of Dangerous Goods  
and on the Globally Harmonized System of Classification  
and Labelling of Chemicals**

**Sub-Committee of Experts on the Transport of Dangerous Goods**

**18 June 2013**

**Forty-third session**

Geneva, 24–28 June 2013

Item 5 (a) of the provisional agenda

**Transport of gases: ethylene oxide and propylene oxide mixtures**

### **Provisions for the Transport of UN 2983 (Ethylene Oxide and Propylene Oxide Mixtures)**

**Submitted by the Expert from the United States**

#### **Background**

1. At a recent Working Group of the Whole Meeting (Montréal, 15 to 19 October 2012), the ICAO Dangerous Goods Panel considered whether Packing Instruction 361 in the ICAO Technical Instructions was mistakenly assigned to UN 2983, Ethylene oxide and propylene oxide mixtures. It was noted that Packing Instruction 361 permits the use of both combination and single packagings (similar to P001 of the UN Model Regulations), whereas the Model Regulations permit only the use of pressure receptacles by assignment of P200.

2. In considering the issue, it was noted by some Panel members that while the UN Model Regulations restricted the transport of UN 2983 to pressure receptacles, other regulatory instruments (for example the U.S. Hazardous Materials Regulations and the ADR/RID), like the Technical Instructions, also provided for a number of packaging authorizations in addition to pressure receptacles.

3. A review of the current provisions of the Model Regulations for similarly classed substances has been conducted with a view to establishing the most appropriate multimodal packaging provisions for the transport of UN 2983 Ethylene oxide and propylene oxide mixtures. Currently, P200 is assigned to UN 2983 in the Model Regulations whereas other regional and modal regulations provide for a wider range of authorized packagings consistent with those provided for similarly classed materials. While P200 is used for certain liquids with unique properties (for example those that are

highly reactive to water and other materials etc.), it is suggested that P001 may be a more appropriate packing instruction based on a comparison to other flammable liquids assigned to P001 with similar properties (i.e. flammable liquids with toxic subsidiary risks and similar vapour pressures). It should be noted that the data provided for the mixture assumes the maximum allowable concentration of the more volatile component (i.e. a 30% ethylene oxide concentration in the mixture).

4. The Sub-Committee is invited to consider this matter and provide feedback that could be documented in the report of this session for consideration by the ICAO Dangerous Goods Panel at its upcoming Panel meeting to be held in October. Based on the feedback received at this session, the United States will submit a formal proposal for the December session to align the packaging provisions for UN 2983 with those of other substances with similar properties.

**Annex**

Material	UN Number	Boiling Point C	Flash Point C	Vapour Pressure kPa 25C	Hazard Class	Subsidiary risk	ICAO Packing Instruction	UN Packing Instruction
<b>Ethylene oxide and propylene oxide mixture (with 30% ethylene oxide)</b>	2983	24	<0	96.5	3	6.1	361	P200
Ethylene Oxide	1040	11	-20	174.0	2.3	None	200	P200
Propylene Oxide	1280	34	-37	71.7	3	None	361	P001
Flammable material.								
Butane	1011	-1	-60	242.8	2.3	None	200	P200
Diethyl ether	1155	35	-45	55.1	3	None	361	P001
Flammable and toxic materials								
Acetaldehyde	1089	20	-39	120.2	3	None	361	P001
Acetonitrile	1093	77	0	11.7	3	6.1	361	P001
Allyl chloride	1100	45	-32	49.1	3	6.1	361	P001
Chloroprene	1991	59	-16	28.9	3	6.1	361	P001

Note: In addition to the above, it should be noted that over 20 n.o.s. entries that meet the criteria of a flammable liquid in PGI and that are also toxic are assigned to P001 and to PI 361 in the ICAO Technical Instructions.
